FOREWORD

ABRAM LINCOLN, ON THE AUTHORITY of Lord Charnwood in his famous biography of our Civil War President, once said that he didn't think much of a man who wasn't wiser today than he was yesterday. Day by day improvement is a little too much to look for in an almanac or its editors. If we improve and advance year by year, we trust that our readers will be satisfied.

We believe that the 1948 *Information Please Almanac* is an improvement over the 1947 edition with which we entered this fascinating field. We have brought our records up to date and we offer a fresh set of attractive articles by fine writers on the arts and sciences and other forms of activity afoot in this turbulent world of today. We have improved the text and charts in various divisions of this volume, and we have added a new section, a Political Guide for 1948, a section equivalent to a full-sized book. In effect, we are including a book within a book at no extra cost.

The *Political Guide* is our first effort to present in each new edition a complete book-sized section dealing with a subject that is timely and vital to the great mass of our subscribers. Since the editor had a man-sized job watching over the Almanac text and charts in general and because the production of the Political Guide was a full task in itself, the political football was tossed on a lateral pass to the big boss, Dan Golenpaul, who said he was as willin' as Barkis to carry it for a touchdown. If he hasn't done so, he can't say he wasn't warned that he might fumble the ball before he reached the goal.

Thus we of the editorial staff have done what we could to make the *Information Please Almanac* of 1948 a better one than that of 1947. But in all fairness we must confess that we have had outside help in large quantities. Our 1947 almanac had been only a short time in the hands of our subscribers when we discovered, by mail, that our office staff had been bolstered by hundreds of volunteer workers. Purchasers of the almanac became our best friends and severest critics. They came through as proofreaders and research experts for us. We owe a considerable debt to these volunteer workers, our subscribers. May their kindly tribe increase in 1948.

Once again we acknowledge with deep gratitude the contribution to the production of this volume made by The Encyclopaedia Britannica, The Research Institute of America, The New York *Herald Tribune* and the faithful and industrious staff in our own office.

INTRODUCTION

IT IS OUR POLICY TO INCLUDE IN each new edition of the Almanac a section equivalent to a book on an important, timely subject. Because of the compelling interest in the 1948 election, we are presenting a *Political Guide for 1948*. Do the voters need and want a Political Guide? Well, yes and no! A good many voters have already decided upon their votes. Some have voted the same way for decades.

Millions of voters, though, are undecided and want to make the best use of their franchise. We believe they will be interested in our *Political Guide* and, we hope, helped by it. The millions of men and women who were in service from 1940 to 1945 had little time to follow politics. Many of them entered the service in their teens and never knew any President other than Franklin D. Roosevelt. Now these millions of ex-service people at home as workers, students, businessmen, etc., will have a greater awareness of the problems and issues before the country. They and other voters will want to know what it's all about.

The preparation of a compact authoritative political guide was a big job and required a large organization. We set up a research staff and engaged outstanding authorities—more than thirty people collaborated—all outstanding in their particular fields. They worked independently on assignments suggested by me, their only restriction being a necessary limitation of space. Their opinions are their own.

We make no pretense that our contributors' opinions are entirely without bias. It's pretty hard for anyone to be interested in politics without a certain amount of bias. When I asked Mark Sullivan, and Tom Stokes to discuss the campaigns and Administrations of the 20th century, I didn't expect Sullivan to be very enthusiastic about F.D.R. or Tom Stokes to be enthusiastic about Herbert Hoover, but I knew that their analyses and interpretations would be honest ones. I expected a differ-

ence of opinion among my contributors. I wanted it.

No contributors were selected on the basis of their being Republicans or Democrats. We were merely concerned with whether they were the best qualified people to cover the subjects assigned. I tried to be objective. I hope I succeeded. But I want to make clear that I am a gent with political opinions. My votes have been cast for Socialists, Democrats and Republicans. How will I vote in '48? I won't know until I finish reading the *Political Guide*. If our readers approach the *Guide* in the same spirit, we will have achieved our objective. Parties and politicians don't always win elections on the considered votes of the electorate. They are aided by the regular party vote apathy and the "against" attitude of voters.

Dr. Gallup points out in his article the criminal neglect of voters to exercise their franchise. This is largely due to laziness or cynicism. There are many reasons for the regular party vote. There is nothing we can do about that. It's like arguing with a Dodger rooter. The "against" vote is a strange American phenomenon. It's healthy to be against things, but that isn't a good enough reason for voting. When you have decided what you are against; then decide what you are for. Your vote will be worth more to yourself and the country if you vote for a party or candidate because of its principles, its program and record.

The purpose of this *Political Guide* is not to induce voting for any particular party or candidate but merely to present the record and let you decide. The only thing we urge is that you do vote. You have the power to decide the fate of our country—yes, the fate of the world—with your vote. The right to vote was earned for you by great sacrifice and courage. Men—and let's include women, have fought and died for the inalienable rights. And for what Lincoln called "the government of the people, by the people, for the people."

DAN GOLENPAUL, *Editor*

THE PRESENT POLITICAL MOOD OF AMERICA

by JOHN GUNTHER

Author of "Inside U. S. A."

MANY FRONTIERS DIVIDE THE United States—frontiers of age, sex, education, race, earning power—in addition to those familiar demarcations we call the states. Frontiers of mood and spirit too. So to answer the question, What are Americans thinking about, talking about, arguing about, squawking about, in the turbulent and unpredictable winter of 1947-48, is far from easy.

Let us inspect briefly some basic American desires on a sectional or regional basis, as indicated by a long trip through the nation.

Traditionally, conventionally, the *West* stands for personal government—and at the same time it wants irrigation, reclamation, development of public lands, cheap power, and flood control—in a word federal aid. The *Middle West* stands for an agriculture that will steadily become more scientific and hence more profitable, and at the same time wants to keep federal influence to the minimum. Its attitude toward foreign policy might be described by some such adjective as "contractionist." The *South* wants plenty of people all over the country, Middle Westerners face the paradox of how to be moderately non-interventionist without being overtly isolationist. The *South* "the problem child" of the nation. It wants cheaper freight rates, more opportunity to industrialize, development of projects like the TVA, and less attention from the North, thank you, to its compelling succubus, the Negro problem. The *West* is the most mature section of the United States politically, the richest, and the dominant cultural influence on the entire nation. It stands for and wants a lot of things, some of them highly contradictory—a lively foreign trade, a tariff wall, close community to Europe, healthy industry, good labor relations, and high prices for its manufactured goods.

If only to illustrate the astonishing diversity of America—its prodigious and inexhaustible variety of interests, hopes, policies, issues—consider, too, what some individual States are thinking about these hurried days:

MAINE—The value of its potato crop, forest fire control, and whether the Passamaquoddy project can be converted into a refuge for European Displaced Persons.

PENNSYLVANIA—Smoke control in Pittsburgh.

CALIFORNIA—Whether or not Earl Warren can swing (on early ballots at least) the 11 western States to the candidacy of someone he likes in the Republican convention, and whether or not the fierce internecine warfare in Democratic circles will produce a third party split, led by Henry Wallace.

UTAH—A minor, zany, secessionist movement by some 2,000 settlers in western Utah who would like to form their own autonomous community.

MINNESOTA—Whether its favorite son Harold Stassen would consent to take second place (if he could get it) on a presidential ticket with either Taft or Eisenhower, and whether the Mesabi Iron Range, the basic source of American steel production, can escape exhaustion in the near future.

ARIZONA—The price of water.

COLORADO—Tourist traffic, miners' wages, absentee capital, the sugar industry, and a new community theater in Colorado Springs.

TEXAS—Violent subsurface warfare between conservative and liberal wings of the Democratic party, plus continuing agitation on the question of freedom of opinion at the University of Texas.

NEW HAMPSHIRE—Community action in matters of public health.

GEORGIA—The stubborn campaign of Herman Talmadge, son of old Gene, to recapture the governorship which he grabbed for a brief disgraceful interval last year.

ILLINOIS—The struggle of a clean-up mayor, Kennelley, to reform the Chicago city administration.

And so on. Forty-eight States breed many times forty-eight problems, topics, issues.

Then there are all manner of what might be called "common denominator issues," which repeat themselves in varying degrees of intensity all over the nation—for instance, housing, rent control, universal military training, tax reduction, reduction of the national debt, the mind of John L. Lewis, the Communist witch hunt, whether Secretary of State Marshall will still be President Truman's greatest single asset in

1948, and whether or not the Taft-Hartley law is going to work.

All this, too, must be set against the ineluctable temporal fact that this year is a presidential year, when every issue is likely to be obscured, distorted, exaggerated, and made mincemeat of, by voters crazed by blatant oratory, by hollering delegates swamped by the confusions of their own sweltering conventions, by shyster politicians oscillating from one feed bag to the next, and by hordes of citizens who think of presidential politics as a kind of quadrennial World Series.

Finally, crossing over all internal frontiers, binding the nation together in both agreement and disagreement (yes, countries are sometimes held together by what they disagree about), are two more issues so literally tremendous that they are likely to determine our way of life for years to come: foreign policy (i.e. how to keep the so-

called peace), and the price of food. Moreover, these two supreme issues interlock in a complex and urgent way to form a single, superduper, double-decker issue above all other issues.

How to maintain peace abroad, how to check inflation at home, are both dependent, it seems at the moment, on the amount of food the American people eat. Is the United States prepared to go hungry—or at least eat fewer beefsteaks—in order to liberate a comparatively minor amount of grain for use abroad? If voluntary rationing fails, will the reimposition of domestic price controls be necessary? Has the situation developed, in a word, whereby in order to save western Europe from regimentation we must regiment ourselves? The answer would appear to be Yes. Food, prices and foreign policy have become inextricably involved. Hunger waits for no man, whether in Europe or at home.

BIOGRAPHIES OF PROBABLE CANDIDATES FOR THE PRESIDENCY—1948

Edited by Bert Andrews, Chief Washington Correspondent, Washington Bureau, N. Y. Herald Tribune; winner Raymond Clapper Award, 1945, for best Washington Correspondence.

THOMAS E. DEWEY

Abridged from John Gunther's "Inside U. S. A.," with permission of the publishers, Harper & Bros., N. Y. C.

In both foreign and domestic policy Thomas Edmund Dewey falls roughly in the middle between extreme conservatives, such as Taft and Bricker, and the liberal wing of the party, represented by Harold E. Stassen. As Governor of New York, he will go into the Republican convention with a great head start—the forty-seven electoral votes of New York in the bag. Also, as Governor of New York, he has the advantage of being able to avoid committing himself on controversial issues; he does not have to record his vote in

Congress. His silences have, however, laid him open to widespread criticism.

Thomas E. Dewey was born in Owosso, Michigan, on March 24, 1902, son of the local postmaster. While at the University of Michigan, his resonant baritone voice won him first place in a state singing contest. He went to New York to pursue singing as a career; but he also studied law at Columbia. He chose the law.

In 1935 Governor Herbert H. Lehman asked four prominent Republicans to act as special prosecutor to clean out the gangsters who were then the scourge of New York City. All four turned down the job; but one of them, George Z. Medall, recommended a young protege of his—Thomas E. Dewey. He prosecuted the gangsters relentlessly, ably, dramatically

—and became a national hero and creature of folklore.

His fame won Dewey the District Attorneyship; and, in 1942, the Governorship of New York. Although he stated categorically that he would not be a candidate for the Presidency in 1944, it turned out that he was the 1944 Republican nominee.

As a candidate, he had his own awkward past in the field of foreign relations to live down. For instance, on Jan. 10, 1941, he had said that Lend-Lease "would bring an end to free government in the United States and would abolish the Congress for all practical purposes." Later he had to change his mind.

On domestic policy, too, Dewey had to do some fancy side-stepping. Halfway through the campaign it became clear that it would be suicidal to attack the whole New Deal as such. The people were in no mood then to sacrifice the reforms that had come in twelve long years of effort. Dewey practically came out for Roosevelt's own domestic program.

The main theme of his campaign, however, was efficiency in government, as illustrated by his excellent record as Governor of New York.

Dewey lost New York State to Roosevelt in the presidential election of 1944 by 316,991 votes. But two years later he proved that he was still one of the greatest vote-getters of current times by winning reelection as Governor by 687,151—the largest majority ever recorded in a two-man gubernatorial contest.

Republicans never have given the presidential nomination to a man who had it once and failed to win. This precedent does not daunt Dewey in considering 1948 prospects. His pre-convention behavior has been marked by the canniness born in him, plus an overlay of caginess born of experience. He did not indulge in the magnificent recklessness which Americans sometimes admire in politicians. He avoided going out on a limb and taking positions on issues unnecessarily. Every step was carefully calculated and prepared.

In November of last year, after the Marshall Plan had been debated since summer, Dewey came out in favor of our helping western Europe to economic re-

covery. He recommended that a bi-partisan board watch over the aid program; and that the United States refrain from interfering with nationalization of industry in Europe. On most other issues, however, he still continued to preserve his silence.

Public men who have worked with Dewey respect his abilities. Many of them—perhaps jealousy enters in—seem to dislike his personality. He has been accused by his detractors of being short on humor and charm, long on vanity and ambition. On the other hand, he has an inner core of advisers and friends, including some distinguished people, whose loyalty to him is little short of idolatry.

Dewey met his wife, the former Frances Eileen Hutt, during the period of his musical training, and married her in 1928. She had had a brief career on the musical comedy stage. They have two sons, Thomas E., Jr., and John Martin Dewey. When the Deweys can get away from the Executive Mansion in Albany, they go to their farm near Pawling, N. Y.

DWIGHT D. EISENHOWER

by Robert Donovan

Washington Bureau, N. Y. Herald Tribune.

General of the Army Dwight David Eisenhower, by all evidence the most popular man mentioned as a possible Republican candidate for President, has said over and over again that he is not a candidate for political office. But he has never said it in quite such a way that the politicians consider the case closed.

General Eisenhower is a member of no party. Such clues as there are to his political philosophy suggest that he leans toward the Republican rather than toward the Democratic party. His brother, Milton S. Eisenhower, president of Kansas State University, who is said to be the general's political adviser, is a confirmed Republican.

No doubt many Democrats would be clamoring to run General Eisenhower on the Democratic ticket if it were not a foregone conclusion that President Harry S. Truman will be renominated.

Despite the General's repudiation of them, "Eisenhower for President" clubs have sprung up in many parts of the

country and Eisenhower campaign buttons have appeared on the streets.

The camps of Republican aspirants have been haunted by fear of a stampede for General Eisenhower at the Philadelphia convention. Republicans have not forgotten the stampede for Wendell L. Willkie in 1940. One theory is that the convention might turn to General Eisenhower in the event of a deadlock, such as could occur in a contest between Governor Thomas E. Dewey of New York, and Senator Robert A. Taft of Ohio.

The man who commanded the Allied forces against the Axis in North Africa and Europe and who will soon quit his job as Army Chief of Staff to become president of Columbia University is a brilliant leader, an able administrator, a diplomat of demonstrated skill.

It has been said that if General Eisenhower has not been trained as a politician, he was certainly born one, and his sternest critic could not deny that he is well equipped with the attributes that make for a successful political campaign.

He is a first-rate public speaker. He has a colorful appearance. He has warmth of personality unmatched by other military leaders. His popularity with his troops was ample evidence of this. While there would be some question whether General of the Army Douglas MacArthur, for example, would get the so-called veteran vote, there is little doubt where it would go if General Eisenhower were a candidate.

Like most professional soldiers, General Eisenhower has kept his political views largely to himself. In foreign affairs it is clear that he supports President Truman's policies. Such pronouncements as he has made on domestic affairs have shown him to be a conservative.

"Ike" Eisenhower was born in Denison, Texas, on October 14, 1890, the third of six sons. His father was a telephone company employee.

Of the five other sons, one is now a college president, one a banker, one a lawyer, one an electrical engineer and one a druggist.

While Ike was still a boy his family moved to Abilene, Kansas, which he has called home ever since. Once rejected by

the United States Naval Academy because he had passed the age limit for admission, young "Ike" entered the United States Military Academy and was graduated and commissioned a second lieutenant in the infantry in 1915. History was one of his best subjects at West Point. He played on the football team and broke his leg.

From West Point he went to Fort Sam Houston, Texas, as a member of the 19th Infantry. He married Mamie Doud, of Denver, in 1916. He did not go overseas during the first World War, but received the Distinguished Service Medal for marked administrative ability in training tank corps troops. After the war he became aide to General MacArthur when the latter was Chief of Staff.

Five days after the Japanese attack on Pearl Harbor in 1941, Eisenhower was appointed chief of the Army War Plans Division. In June, 1942, he started on his road to fame as a leader of combat forces when he went to England as commander of United States troops. In the months that followed he led all Allied forces in the invasion of North Africa, then Sicily and Italy and finally Europe. The successful invasion of Normandy was one of the great military achievements of all time.

Throughout his triumphs General Eisenhower conducted himself with a modesty and simplicity that won tremendous admiration. After he had become Chief of Staff he once said he hoped the thing he would be remembered for was improving the food in Army mess halls.

DOUGLAS MacARTHUR

by Frank Kelley

National Editor, N. Y. Herald Tribune
Co-author "Star-Spangled Mikado."

Despite his occasional disclaimers of ambitions for the Presidency, General of the Army Douglas MacArthur must be rated a dark horse for the Republican nomination in 1948. One great backer is Colonel Robert R. McCormick of the Chicago *Tribune* and the Hearst press often proclaims his virtues. One worker behind the scenes is former MacArthur staff member, former Governor Philip LaFollette of Wisconsin and Hamilton Fish, the former Congressman

hinks a lot of MacArthur and so, in other years, did such assorted figures as Father Coughlin, Gerald L. K. Smith and William Dudley Pelley.

MacArthur spiked a presidential boom in 1944, saying "I do not covet the nomination nor would I accept it," a paraphrase of the famous refusal uttered by General William T. Sherman. This year, when friends prepared to enter MacArthur in the April, 1948, primaries in Wisconsin, Hansing Hoyt, of Milwaukee, said he received from "the highest level in Tokyo" an anonymous but soldierly reply: "General MacArthur has never failed to respond to any call of duty."

MacArthur has been known to the country for a long time, and his popularity has brightened, dimmed, then brightened again. Weaned on the sword, MacArthur was the son of Lt. Gen. Arthur MacArthur, Civil War hero at 18. Young Douglas was born in barracks at Little Rock, Ark., January 26, 1880. He was graduated from West Point in 1903 at the head of his class and went to the Philippines, where his father was fighting Aguinaldo.

In World War I MacArthur was the youngest commander of an American division, the 42nd or Rainbow outfit. Ten decorations decorated him; France gave him the Croix de Guerre for going over the top with a riding crop. In 1919 MacArthur became superintendent at West Point; he was only 39 and its youngest chief in history.

In 1922 he married Mrs. Louise Cromwell Brooks, of Philadelphia. Almost immediately MacArthur was sent to the Philippines and began reorganization of the Philippine army. From 1925 to 1928 he had corps commands at Atlanta and Baltimore, then returned to the Islands. He was divorced in 1929.

In 1930 President Hoover made MacArthur a full General and Chief of Staff at . . . He was the youngest ever in the job. His popularity took a dive in 1932, however, when under Hoover's orders, he used troops to break up the bonus marchers in Washington; one marcher was killed.

MacArthur retired in 1937 and went back to the Philippines. Grateful islanders made him a Field Marshal; he became un-

crowned king of the Philippines. Five months before Pearl Harbor President Roosevelt recalled him to active duty.

On Roosevelt's orders MacArthur slipped out of Corregidor for Australia in April, 1942, to plan the counter-blows against Japan. With him went his second wife, Jean Marie Faircloth, of Murfreesboro, Tenn., and their son, Arthur, then 4. Combining island-hopping with wide end-runs against Japanese strongholds, MacArthur fought his way back up the New Guinea coast and saw the flag raised again at Manila on February 4, 1945.

Today, nearing 68, MacArthur is tall, erect, handsome, an immaculate dresser. He is in excellent health and takes good care of himself despite prodigious working hours. An Episcopalian, MacArthur weaves a strong religious thread into his utterances, which are full of resounding phrases; Corregidor to him was "our Holy Grail."

MacArthur's current duty, as he sees it, is to remain as Supreme Commander for the Allied Powers in Japan throughout military occupation. In Japan he is at the pinnacle of his career, conscious of his niche in history. He entered Japan by air August 30, 1945 and four days later, September 2, presided at the surrender aboard the battleship *Missouri*.

MacArthur's position on great issues must be divined from his statements on military and occupation affairs. He sees in the new Japanese constitution testimony to his devotion to American ideals. In the treaty the Japanese have renounced war and MacArthur hopes the rest of the world will do the same. Although a military man he detests militarism, advocating only preparedness. He believes in free speech and in a free but responsible press, despite his rigorous wartime censorship.

His labor policy has been to promote the growth of trade unionism and collective bargaining in Japan, although three times he has personally blocked big strikes. In foreign policy MacArthur is no interventionist, but a foe of Communism (as of old-fashioned British imperialism) and determined to make Japan a bulwark against its encroachment upon America from the Orient.

JOSEPH W. MARTIN

by James E. Warner

News Editor, Washington Bureau, N. Y. Herald Tribune.

Joseph William Martin, Jr., Speaker of the House of Representatives, is a conservative politician, and a good one. He knows how to make votes in the largely industrialized Massachusetts district which has re-elected him every year for nearly a quarter century despite hectic efforts of New Dealers to unseat him during the Roosevelt regime.

"Joe," as he is invariably called both at home and in Washington, has few real enemies, even among the Democrats. He has spent his lifetime avoiding making them, and as a result, his political record—always well to the right of center—is an average, plodding, middle-of-the-road one.

The ultra-conservative wing of the Republican party regards Martin as an eminently "safe" man—which he is. The liberals like him personally, if not politically. For this reason the man who right now would become President instantly—because of the new succession law—if President Truman should die cannot be ruled out of the Republican nomination possibility picture should a deadlock develop on the convention floor.

Martin can be attacked—and has been, thus far to no avail—on his conservative voting record. He supported the New Deal labor reforms. He backed the reciprocal trade program—except where it trod on the toes of the jewelry industry, of which his home district in the Attleboros is a national center. That made him votes in Massachusetts, but might cost him some nationally. He opposed fortification of Guam, the Lend-lease Bill, extension of the draft act and arming of merchant ships before Pearl Harbor.

Currently, Martin—who insists he is not interested in the Presidency—opposes universal military training, favors a tax cut, balanced budget, reduction of the debt. He would help foreign nations, but only those who help themselves. He has supported the Un-American Activities Committee of the House.

Born in North Attleboro, Mass., where he still lives, Martin passed his 63rd birthday

November 3. He was the oldest boy of seven children of a blacksmith, started a newspaper route when he was six, finished high school, but refused a scholarship to Dartmouth and went to work as a newspaper reporter because his family needed money. His family's need caused him to abstain from alcohol and tobacco and it has become a lifelong habit. In six years, he accumulated \$1,000, formed a syndicate to buy the North Attleboro *Evening Chronicle*, which he now publishes as sole owner. He also owns a weekly paper and an insurance agency. By North Attleboro standards, he is a rich, as well as a politically powerful, man, but he never lets it go to his head. He entered politics, at the age of 28, via the Massachusetts Legislature in 1911, was elected to Congress in 1924, and has been there ever since. He was chairman of the Republican National Committee managing the Willkie campaign in 1940, was Republican leader of the House before he became Speaker with the 1946 G. O. P. sweep.

Martin's father was born in New Jersey of Scotch Presbyterian parents; his mother, born in Ireland and today still occupying the family house in North Attleboro, is a Roman Catholic. Martin himself lists no religious affiliation in his biographical statements. He is a member of the Elks, the Moose and the Grange.

In 1936, having been elected a national committeeman, he served as Eastern campaign manager as well as floor manager for Landon at the Cleveland convention. The following year he was named chairman of the Republican congressional committee and shared credit for the party's gain of 80 seats in the House. At this time he was ranking minority member of the Committee on Rules and a member of the House Committee on Foreign Affairs.

Martin became Republican leader of the House in 1938, attracting attention for his strategy in uniting Republicans with dissident Democrats to oppose the New Deal.

Martin never married, and probably never will, although he would be a "catch." He is short, stocky, balding, with a twinkle in his eye and a dry Yankee humor. He can make a good, but never a world-shaking or fire-breathing speech. Aside from politics walking is his principal avocation.

GEORGE C. MARSHALL**by Jack Steele****Assistant Bureau Chief, Washington Bureau,
N. Y. Herald Tribune.**

George Catlett Marshall, Secretary of State and war-time Army Chief of Staff, has risen to such a place of eminence among his countrymen that a great many Americans singling out possible candidates for President would be likely to include him on their list.

Seldom, however, since General William T. Sherman's famous remark, "If nominated, I will not accept; if elected, I will not serve," has any American in high place disclaimed political ambition in words so explicit as Secretary Marshall.

Shortly before he became Secretary of State on January 7, 1947, Marshall said: "I think this is as good a time and place as any to terminate speculation regarding me in a political way. I am assuming that the office of Secretary of State . . . is non-political, and I will govern myself accordingly. I will never become involved in political matters, and, therefore, I never can be considered as a candidate for political office."

In 1944, when there were rumors that the Democrats might run General Marshall for President Roosevelt decided not to seek a fourth term, the General said: "I'll be in my grave before I'll be in politics."

By and large, Secretary Marshall's repeated statements that he will not be a candidate for elective office have been taken at face value.

One fact above all others which appears to militate against the likelihood of his running for President is his age. When the next presidential inauguration day comes on January 20, 1949, Secretary Marshall will be sixty-eight years old. Thus, if he were to become President, he would be seventy-two by the time his first term ended. Only one President took office after his sixty-eighth birthday. He was President William Henry Harrison, and he died one month after he entered the White House.

Secretary Marshall, a precise, erect, soft-spoken man who rigidly avoids familiarity, was born at Uniontown, Pennsylvania, on December 31, 1880.

Unable to get a West Point appointment, he entered Virginia Military Institute and upon graduation in 1901 was commissioned a 2nd lieutenant in the Regular Army.

In the First World War he went to France in the first contingent of the American Expeditionary Force as a captain in the 1st Infantry Division. He rose to brigadier general by the end of the war, but in 1919 he reverted to his regular peacetime rank.

In France an incident occurred that greatly furthered Marshall's career. Shortly before the 1st Division was committed to battle General John J. Pershing, A. E. F. Commander, came to inspect the troops. He was hours late and the soldiers waited under a hot sun. When General Pershing came to Marshall's company, he made as if to cut the inspection short when the young captain spoke up.

"By God, sir," Marshall said, "those men have waited four hours for you to inspect them, and you'll inspect them!"

General Pershing not only inspected them but he took the captain's name. Later he was transferred to General Pershing's headquarters as an aide.

Between the two World Wars Marshall followed the routine of professional officers, attending service schools, running Civilian Conservation Corps Camps, commanding the 15th Infantry at Tientsin, China. He returned to Washington in 1938, and with the world again threatened with war, President Roosevelt appointed him Chief of staff. His was the task of rebuilding the United States Army and presiding over its strategy on all fronts.

Several months after the war ended he retired and was appointed by President Truman as special envoy to China to seek reconciliation between warring Chinese factions. In 1947 he became Secretary of State. His great achievement as Secretary has been the formulation of the "Marshall plan" for American aid to those European nations which would work together to restore their war-shattered industries. His policies have been designed to halt the spread of Communism in the world. At the Inter-American Conference at Rio de Janeiro in September, 1947, he summed up his philosophy of government: "The state exists for man, not man for the state."

LEVERETT SALTONSTALL

by Louis M. Lyons

Nieman Fellow, *Harvard University.*

Perhaps the most striking first impression of Senator Leverett Saltonstall, of Massachusetts, is his seeming lack of political glamour.

But his quiet charm, modesty, friendliness, intelligence—though possibly not brilliance—his capacity for hard work, and his unquestioned integrity have enabled him to explode the myth that a wealthy blueblood can't go places in the rough and tumble of politics. His very bashfulness and unspolled naturalness have proved political assets.

He is rated now as one of the biggest vote-getters ever produced in Massachusetts, one of the most respected men in the Senate, and a Republican presidential possibility for 1948, even though he insists his only ambition is to run for re-election to the Senate.

The scion of a New England family which came to Massachusetts in 1630, he won his first political victory in 1920, when, back from service in France as an Army first lieutenant, he was elected to the Board of Aldermen of Newton, Mass.

Since then, he has been defeated for political office only once, when he tried unsuccessfully for the lieutenant governorship of Massachusetts in 1936. After three terms as Massachusetts governor, during which he gave the state a clean, sound administration after years of corruption, he was elected Senator in 1944 with a 400,000 plurality—the greatest ever recorded in the Bay State.

Saltonstall has been called—if there can be such a thing—a "middle-of-the-road liberal." He follows his party leaders in most things, but rebels occasionally and votes as he pleases. This happens most often on foreign affairs, for the Senator is a strong internationalist and supporter of the United Nations. He was an early Willkie supporter and is friendly to Stassen.

In his first years in the Senate he gave the party bosses more headaches than he has of late. One recapitulation by the Senate G. O. P. leadership showed that between January, 1945, and April 30, 1946, he

voted the official party line only 60 percent of the time.

Shortly after his arrival in Washington he joined other freshmen Senators in a statement pledging support of the Administration's foreign policy. He was one of the few Republicans who voted for confirmation of Henry A. Wallace as Secretary of Commerce.

During the past session he supported President Truman's choice of David E. Lillenthal as Chairman of the Atomic Energy Commission. But his other votes reflect more party regularity.

He voted against seating the late Theodore G. Bilbo, and voted for a two-term limit on the Presidency; the Taft-Hartley Labor Act after voting against stiffening amendments; the income tax reduction bill; the Hawkes 15 percent "voluntary" increase feature of the rent bill; prompt consideration of the Kem resolution to investigate alleged Democratic vote frauds in Kansas City, Mo.; creation of a National Science Foundation; and foreign relief and the Greek-Turkish Aid Bill.

The Senator's career, briefly, is this: He was born fifty-five years ago at the Saltonstall family colony in Chestnut Hill, Newton. He attended Harvard College and Harvard University law school, served in the first war, joined his family's law firm, and was elected to the Newton Board of Aldermen. He became assistant district attorney of Middlesex County and then served in the Massachusetts House of Representatives from 1923 through 1936—the last eight years of his term as Speaker of the House.

Saltonstall captained the Harvard crew and played second-string football and hockey. Today, he keeps in good physical condition and recently beat writer John Kieran in a skating race. He likes to sail, ride horseback, play golf, and work around his rambling farm at Dover, Mass.

Saltonstall occupies a key spot in the Senate as a member of the Republican Policy Committee and the important armed services and appropriations committees. He introduced several child health bills in the last session, supported federal aid to education, and his labors to resolve controversies over the armed services uni-

ication bill were credited by his colleagues with getting it passed.

He is famed for his loyalty to his family and Harvard. He represented the tenth generation of Saltonstalls at Harvard. In his telephone number and automobile license plates he perpetuates his class numerals—1914. But his resounding victories at the polls and the support given him by many labor groups are proof that he appeals strongly to the polyglot population of a state where old-stock Yankees are now in the minority.

HAROLD E. STASSEN

by Roscoe Drummond

Chief Washington Correspondent, *Christian Science Monitor*.

Harold Edward Stassen—the Man from Minnesota who is likely to be speaking in Seattle one night, conferring with Republican leaders in Washington the next and interviewing Stalin in the Kremlin on the weekend—has been running for the Presidency for nearly twenty years. He has never lost a round.

His big round is coming up. He was the first candidate in the ring to be openly, avowedly, visibly, candidly seeking the 1948 Republican nomination. He counts that no offense. He is seeking frankly what most of his political competitors, though wanting it just as much, if not more, seek coyly.

Here is the climactic test for this youthful political veteran who, though having held public office almost continuously since he was 23 years old (County Attorney) could still be only 42 if he should enter the White House in 1949. Everything that has gone before has been training and preparation for the contest which is now at hand. It has been a wide and long experience in the art and administration of government, in the ways of politics and in the understanding of men. From them has been forged an equipment for office which Stassen supporters are convinced will impress the country—and the Republican nominating convention.

A central appeal of the Stassen candidacy is that the United States is now faced, only on a larger scale, with much the same issues and crises, at home and abroad,

which he faced as thrice Governor of Minnesota, as Assistant Chief of Staff for Administration to Admiral Halsey and as a member of the American delegation which drafted the United Nations Charter at San Francisco. The problems are different in scope but similar in essence and Mr. Stassen has addressed himself to them, not theoretically, but from experience.

He has had political and administrative experience as Governor; he has dealt with strikes and hunger as Governor; he is intimately aware of the nation's military problems and position from his role in the war; he knows personally the political leaders of nearly every European country and his knowledge of foreign affairs is first-hand.

In 1938, when the Olsen-Bensen Farmer-Laborite regime was crumpling from its own top-heavy corruption and laxity, Stassen wrested control of the Republican party from the perpetually defeated Republican Old Guard and won a chance to have a try himself. His first action was to protect labor from a reactionary, oppressive anti-labor statute which was being pressed in the state legislature. He next was to propose and secure passage in its place of his own Labor Peace Plan, which contained nearly all of the less controversial provisions of the Taft-Hartley bill, including a cooling-off period before any strike could take place. Strikes dropped 70 percent, and while union leaders first fought the law, Stassen won the active support of both the A. F. of L. and the C. I. O. when he ran for re-election.

Washington correspondents know that the Taft-Hartley Act would have been more restrictive than it is, were it not for Stassen's vigorous testimony. It contains some provisions he opposed, such as the ban on the closed shop and the requirement of anti-Communist affidavits. But he believes the law as a whole is essential to achieve a fair balance between labor and management, and he supports it.

The Republican Old Guard in Minnesota opposed Stassen from the beginning; he defeated it and took over the party in his state. Today the Republican Old Guard in the nation is the source of the principal opposition to his winning the presidential

nomination. It is opposed to Stassen, not because he is radical—which he isn't—but because he is too forthright and too independent, determined to be beholden to no small group of politicians and to no single bloc of his supporters. It is opposed to him because he is capable of vigorous leadership and has the capacity to draw his strength and his support, not from a political hierarchy but direct from the people over the heads of the political managers, as he did throughout his three terms as Governor of Minnesota.

Mr. Stassen is not in the Senate today by his own choice. He could have had an easy nomination and election in 1946. He chose the alternative of freedom to travel and study all of America and to visit at least 16 foreign countries, including Russia. His unorthodox premise was that the best way to get the presidential nomination was to set about equipping himself to make the best possible President. That's what he has been doing most of his life, after working his way through the University of Minnesota and after first beginning the practice of law in St. Paul.

Stassen is no more radical than a Massachusetts Saltonstall or a blue serge suit. He has a modern outlook and can look a new fact in the face without blushing. The Republican party may or may not want a middle-of-the-road candidate in 1948, but if it does and it looks down the middle of the road, there will be Stassen.

ROBERT A. TAFT

Abridged from John Gunther's "Inside U. S. A.," with permission of the publishers, Harper & Bros., N. Y. C.

Robert Alphonso Taft, one of the sons of the late President William Howard Taft, was something of a child prodigy. In Taft School, Yale and Harvard Law Schools, he was first in his class; he has been called, next to Brandeis, the most brilliant student the Harvard Law School ever produced. He practiced law for a time, setting up a firm in Cincinnati with his brother Charles, and interested himself in politics.

He became a State Senator in Ohio, at a time when the Ku Klux Klan was strong, and his first notable service was a courageous offensive against the Klan. In 1938 he

was elected to the U. S. Senate, and was re-elected (but just barely) in 1944.

A hard and tireless worker, Taft has brain power and knows how to organize and use it. His sincerity is absolute.

That Taft should be a conservative is quite understandable in view of his family background. That he should have been an isolationist is also understandable. What cannot be explained in Taft are his majestic wrong-headedness, his Brobdignagian bad judgments.

Following are some of Taft's statements with the dates they were made:

April 14, 1940: "I am opposed to the Selective Service Bill because in my opinion no necessity exists requiring such tragic action."

Feb. 16, 1941: "It is simply fantastic to suppose there is any danger of an attack on the United States by Japan."

Feb. 22, 1941: "An invasion of the United States by the German army is as fantastic as would be the invasion of Germany . . . by an American army and as unlikely to be undertaken."

Sept. 22, 1941: "There is much less danger to this country . . . today than there was two years ago; certainly much less than there was one year ago."

Taft is honest; one cannot blame these fantastically bad judgments on politics. The clue is probably a certain Philistinism and an almost pathological setness of vision and stubbornness.

He voted against Lend-Lease, against the extension of the draft, and even against the confirmation as Secretary of War of that eminent fellow Republican, Henry L. Stimson. He opposed the confirmation of David E. Lilienthal as chairman of the U. S. Atomic Energy Commission. He spoke at America First meetings, although he was never a member, and sought to block American participation in the world bank and the international stabilization fund. He did, however, vote for the United Nations charter.

On domestic affairs Taft's record is somewhat contradictory. His first Senate speech was against T. V. A., which is the most generous work of man in the United States. He fought price control. On the other hand he has several times taken a mild pro-

labor line; once or twice he even supported Administration measures favoring labor. He joined Senators Wagner and Ellender to write a housing bill which at least promised something, if it could be put through Congress. And he made a remarkable coalition with two progressive Democrats (Thomas of Utah and Hill of Alabama) to introduce a bill for a modicum of federal aid to education.

The brightest star in the Taft family is Robert's wife, Martha. She is a much more accomplished speaker than her husband, and has assisted in all his campaigns. After Taft's first run for the Senate, one Ohio newspaper headlined the event: BOB AND MARTHA WIN. They have four children. When not in Washington the Tafts live at Sky Farm, a modest suburban estate near Cincinnati, where they grow strawberries for fun and profit. When they can find the time they spend their summers at Murray Bay, Canada, where Tafts are wont to congregate.

HARRY S. TRUMAN

by Walter Hehmer

Co-author of "This Man Truman."

President Truman will seek title to the White House in his own right in 1948, but he seems destined still to wear the mantle of Franklin D. Roosevelt in his campaign.

Truman has worked hard to build an administration of his own since that mantle first fell upon his vice presidential shoulders with the death of F. D. R. in April, 1945.

He has moved a whole new crop of faces into the top executive posts of the government and, in meeting a host of post-war domestic and international problems, he has stood on his own feet and made his own decisions.

But members of his cabinet and officials of the Democratic national committee opened his campaign—obviously with his sanction—by advertising him as the man to carry on the "Roosevelt tradition."

How faithfully he has followed the footsteps of F. D. R. is a matter of political debate, but the Truman of today, at least, is far from the unknown quantity he was when he succeeded to the White

House in the final, critical days of World War II. His only claims to fame then were his chairmanship of a special Senate committee which had effectively investigated the war effort—and the fact that he was hand-picked by F. D. R. as his fourth-term running mate.

The American people held their collective breath while they waited for Truman to show his colors and stature. Would he prove equal, they wondered, to the tremendous problems of war and peace?

They knew, or soon found out, only that he came from a proud, long-lived, down-to-earth family, unmarked by pretension on either side.

Born in modest circumstances at Lamar, Mo., in 1884, he started his career as a dirt farmer. He served as an artillery captain in World War I, was a partner in a haberdashery that failed in the brief depression that followed the war, climbed the ladder of local politics in Kansas City under the wing of its notorious Democratic boss, the late Tom Pendergast.

Elected to the Senate in 1934 with the help of the Pendergast machine, Truman attracted little attention until he became chairman of the special committee which investigated first the national defense and then the war production program.

The work of the committee, which on many occasions unleashed critical blasts at the administration and the armed forces, won him both headlines and the attention of Roosevelt. When F. D. R. sought a new running-mate to replace Henry Wallace in 1944, he picked out Truman as a man who, if he would not contribute much to the ticket, at least would not alienate large blocs of votes.

After Roosevelt won his fourth term, Truman settled back to the prosaic job of presiding over the Senate, steeling himself against the possibility that F. D. R. would not live out his term. Roosevelt confided little in him, making no attempt to prepare him for the great decisions he would soon have to make.

This, then, was the man who stepped into the White House in the critical spring of 1945, with the Allied armies knocking at the gates of Germany and the American forces in the Pacific preparing

for the anticipated assault on the home islands of Japan. Victory was in sight, but not yet sure.

If the nation had been fearful, it reacted with enthusiasm when Truman tackled his job with calmness and humility—but decided self-assurance. It sent his popularity soaring above even the peaks hit by Roosevelt as he handled, with no signs of wavering, the problems attending the birth of the United Nations, the defeat of Germany, the dropping of the first atom bomb and the surrender of Japan.

Peace brought new problems—and showed the nation a new side of Harry Truman. He tackled the difficulties of reconversion, a national malaise of strikes, the relaxation of war-time controls and the first moves to restore stability to the war-torn world with somewhat less self-assurance, considerably more vacillation.

He could not control the Congress still dominated by his own party. A public uproar greeted the prolongation of war-time shortages. His political stock plummeted. Democrats suffered their first defeat in fourteen years in the 1946 bi-elections. Truman found himself faced with a Republican-controlled Congress.

Out of his subsequent battles with this Republican Congress have come most of the issues—foreign as well as domestic—for the 1948 presidential race.

On the domestic side there were his vetoes of two tax reduction bills, his fruitless veto of the Taft-Hartley Labor Act and the refusal of Congress to take seriously many of his proposals for so-called "social" legislation.

The President's pleas, direct or indirect, for legislation on the following matters fell on deaf ears: a long-range housing program, federal aid to education, health insurance, broadening of the social security program and a boost in minimum wage standards.

The first session of the 80th Congress also adjourned without enacting universal military training or easing the admission of Europe's displaced persons to the U. S.—both of which were urgently sought by Truman and Administration leaders.

On the international front, the Republicans maintained the bi-partisan approach

by approving and appropriating funds for the Truman Doctrine to save Greece and Turkey from Communist infiltration and for foreign relief.

Truman's call for a special session of Congress to deal with high prices and foreign aid plunged him into a new wrangle with the Republicans. The GOP leader bluntly rejected proposals for a bi-partisan attack on inflation and warned that they would write no "blank check" for Marshall Plan assistance to Europe.

The consensus seems to be that he has attempted to plow a "middle-of-the-road" course, but has veered somewhat to the left of center. Most observers place him substantially to the right of the old Roosevelt position, but also well to the left of all potential Republican presidential nominees.

The more radical left-wing groups have accused him of deserting the Roosevelt line, while professing to hold it, by failing to go to bat for his predecessor's program for "social reform."

Republican leaders, meanwhile, continue to blast his Administration as "radical" and "red" and to charge that he is still the "captive" of the P. A. C.

The electorate, trying to make up its collective mind whether Truman's course suits the needs of the times, may well come to conclusions about like these:

Harry Truman, in three years, has not established himself as a great President but he has grown steadily in the "toughest job in the world." He has exhibited great courage in the face of domestic and international difficulties such as have confronted few chief executives. His strong points are his courage, his integrity and his humanity.

A Republican nominee lacking any of these qualities will find Truman hard to beat.

ARTHUR H. VANDENBERG

Abridged from John Gunther's "Inside U. S. A.," with permission of the publishers, Harper & Bros., N. Y. C.

Arthur Hendrick Vandenberg's greater hero is Alexander Hamilton, about whom he has written two books; the title page

one of them carries the motto, "Nationalism—not 'internationalism'—is the indispensable bulwark of American independence." As recently as 1939 Vandenberg proclaimed, "This so-called war is nothing but about twenty-five people and propaganda. They want our money and our men."

But in the last two years the isolationist Vandenberg has disappeared, and an internationalist Vandenberg emerged. He has worked staunchly with three Secretaries of State to help build and sustain the United Nations and to help write the peace treaties. He has become by far the most influential Republican in the Senate on foreign affairs.

Vandenberg's change of attitude is not surprising, since he has a supple mind and great capacity for growth; also he never made a fetish of being either all-conservative or all-liberal. In fact, one critic (Milton S. Mayer) has said of him: "On domestic problems you can't locate him at all. He has stood squarely on both sides of every issue for the past ten years. He has been . . . for the R. F. C. and against pump-priming; for economy and against governmental reorganization; . . . for and against federal control of relief; for budget balancing and at the same time for a general pension; for and against income tax publicity . . ."

In Vandenberg's own view his best achievement in the Senate was his sponsorship of the Federal Deposit Insurance Corporation Law, which insures bank deposits, and is usually thought of as a New Deal law. His interest in this idea may have come from the fact that his father—a Michigan harness maker—lost all his money and his business in the crash of 1893; and Arthur, at the age of nine, had to go to work to help support his family. He ran a pushcart after school, delivering shoes from a wholesale house to the freight yard.

In 1910 Vandenberg got fired from one job because he played hookey to watch a parade for his idol, Theodore Roosevelt. He got another job as office boy on the *Grand Rapids Herald*. A few years later he was publisher, manager and editor.

As early as 1907 he started campaigning throughout Michigan for the Republican

party. Nine years later he was so well known that he was urged to run for Governor, but he refused. Not until 1928 did he come out for Senator, when he was perfectly certain (a) that he would win, and (b) that he was wealthy enough to support the job. He won, and has been in the Senate ever since. In 1934 he was the only Republican Senator in the whole country to win re-election in the Roosevelt landslide.

Now, at the age of sixty-two, Vandenberg is a large, solidly-built man, who wears his age well. White hair combed laterally across a bulging brow; a heavy gold watch chain worn laterally across a massive waistcoat—these are as familiar as the black pants. But he has nothing of the blowsy look of some "professional" Senators. He has dignity; he gives an impression of power—an easy and affluent kind of power—plus an irreverent wit and comfortable good humor; a note of laziness (despite his unrivaled reputation for industry), and a very definite and alert sophistication.

Vandenberg's brain is better than the puddings some Senators have inside their skulls, and he has never lost the advantage of the half-a-generation head start he got in life, as a result of having gone to work at the age of nine. What caused him to shift from a narrow nationalism to his present internationalism? The answer is security—the keynote of his whole life. He would hate to think of the world, and his own country, going to ruin just at the juncture when he is in a position to enjoy it most and serve it best.

Last fall Vandenberg said—with his fingers crossed—that he was not a presidential candidate. He declined the Republican nomination for Vice President in 1936, and he "was declined" for the presidential nomination in 1940 when Wendell Willkie got it. In 1944 he came out for General Douglas MacArthur.

Could Vandenberg be "persuaded" to run in 1948? Of course—if all the circumstances are propitious.

Mrs. Vandenberg is the former Hazel H. Whitaker. They have two daughters and a son, Arthur Jr., who is his father's secretary.

HENRY A. WALLACE

by Robert Donovan

Washington Bureau, N. Y. *Herald Tribune*.

Henry Agaard Wallace, farmer, editor, philosopher, erstwhile Secretary of Commerce and Secretary of Agriculture, and former Democratic Vice President, is a rallying-point for a conglomeration of Left Wing elements in the United States.

He is not their acknowledged leader. He has no cohesive political following. But above all others he has been most articulate in attacking Wall Street Red-baiting, "war-with-Russia hysteria," compulsory military training, the Taft-Hartley Act and other anathemas of the Left Wing groups.

In July, 1947, a Democratic faction in California led by Robert W. Kenny, national co-chairman of the Progressive Citizens of America, organized a "Wallace for President" movement, but it was subsequently repudiated by the California Democratic State Committee.

There are few men on the present-day American political scene about whom such bitter controversy swirls as swirls around Henry Wallace. Mr. Wallace will surely be heard from in the 1948 presidential election campaign. It is even possible, though not probable, that he will be the candidate of a third party.

A crusader for reforms like abolition of the poll tax and broader rights for labor and a fervent advocate of closer understanding with Russia, Mr. Wallace has been an outspoken critic of President Truman, who ousted him in 1946 as Secretary of Commerce, and he has threatened to "build a new party."

It has been Mr. Wallace's contention that the Truman Doctrine of aid to Greece and Turkey to check Communism was a step toward war and that Mr. Truman has surrounded himself with a cabinet representing the philosophy of Wall Street.

"Under the Republicans," Mr. Wallace told a Madison Square Garden rally in New York on September 11, 1947, "Wall Street ran America; under the present Administration Wall Street is all set to run the world."

Mr. Wallace, whose slogans, such as "the

century of the common man," "full employment," and "the ever-normal granary," have been staples in American political debate for more than a decade, was born in Adair County, Iowa, on October 7, 1888. He was a registered Republican until 1936 when he switched to the Democratic party. His father, Henry C. Wallace, had been Secretary of Agriculture under President Harding and Coolidge. Henry Wallace became Secretary of Agriculture in the first Administration of President Franklin D. Roosevelt in 1933 after a long career as editor of his family's magazine *Wallace's Farmer*.

Probably no Secretary of Agriculture in American history lived through so much controversy as Mr. Wallace in the early days of New Deal crop control and the "plowing under of 6,000,000 little pigs." He remained in his post, however, until 1941 when he became Vice President. In 1944 he failed to win renomination because his Left Wing leanings were considered detrimental to the Democratic ticket.

To the Southern and conservative factions of the Democratic party Mr. Wallace was "starry-eyed," a dreamer and visionary and far too friendly with labor.

President Roosevelt rather lukewarmly asked the Democratic convention in Chicago to renominate Mr. Wallace, but he did not insist upon it. In a letter to the convention chairman, Senator Samuel D. Jackson, of Indiana, the President put it:

"I have been associated with Henry Wallace during his past four years as Vice President, for eight earlier while he was Secretary of Agriculture, and well before that. I like him and I respect him, and he is my personal friend. For these reasons I personally would vote for his renomination if I were a delegate to the convention."

In losing the nomination for Vice President, Henry Wallace lost the Presidency for Harry S. Truman, who was chosen in his stead, became President when Mr. Roosevelt died on April 12, 1945.

A month before President Roosevelt died he appointed Mr. Wallace Secretary of Commerce, a post he retained for more than a year under President Truman.

On September 20, 1946, Mr. Truman forced Mr. Wallace to resign after he had

assailed the "get tough with Russia" policy of James F. Byrnes, then Secretary of State, at a moment when Mr. Byrnes was engaged in difficult negotiations with the Russians at a meeting of the Council of Foreign Ministers in Paris.

Henry Wallace returned to private life but not to obscurity. He became editor of *The New Republic*, and from its pages and the speaker's platform he kept up a steady attack on both parties and brandished the threat of a third party in 1948.

EARL WARREN

by Earl C. Behrens

Political Editor, San Francisco Chronicle.

Earl Warren flashed to national political prominence in 1946 when he carried off both the Republican and Democratic gubernatorial nominations in California—an unprecedented occurrence in American politics.

The California Governor previously had been in hand in Republican national slate-making in 1944, when he was offered and turned down the chance to be Thomas E. Dewey's running mate. But his sweep of the California primaries forced the G. O. P. leaders to recognize his potentialities for top spot on their presidential ticket in 1948.

His 1946 feat of defeating the Democrats on their own primary brought Warren handicaps as well as acclaim, however. Some old-line Republicans quickly raised the point that any man able to win such bi-partisan backing might not be "enough of a Republican" to suit them.

As much as his proved ability to win Democratic votes appealed to a Republican party hungering for national power, the Old Guard made no bones of its fears that it might be difficult to tell whether Warren was a Democrat or a Republican once he moved into the White House.

Bolstering their fears was the fact that Warren, who is a veteran of World War I, and will be fifty-seven when the 1948 election rolls around, hasn't always seen eye to eye with his party's leaders in Washington.

There was the time, for example, when the Republicans in the Eightieth Congress were booming income tax cuts. Earl War-

ren announced he thought such cuts should wait until the government made a bigger dent in its national debt.

What's more, he told his fellow Republicans that tax cuts, once they were made, should be aimed to relieve lower income groups first. This happened to be the same argument used by President Truman, in vetoing the tax bill twice.

For another thing, he publicly endorsed universal military training—a step opposed by some Republican statesmen.

Warren also wants Western reclamation and industrial projects developed and wants federal aid to do it. While a staunch critic of too much centralization of government in Washington, he bluntly reprimanded Republicans in the House Appropriations committee when they slashed federal reclamation funds in the 1947 budget.

On the question of prices, Warren said that there was "too much haste in removing a good many of our controls" and that Congress should have used "a more orderly approach."

On the international front, he has come out for the Marshall Plan, the United Nations, and a strong military establishment for the United States, squelching some suspicions that he might have isolationist leanings.

As Governor, Warren has sponsored compulsory health insurance, disability insurance, liberalization of workmen's compensation and an extensive social welfare program.

In the 1946 landslide—when he was re-elected by the record-smashing bi-partisan poll of 2,344,542 votes—Warren was supported by the American Federation of Labor. The Congress of Industrial Organizations and its Political Action Committee, however, opposed him.

He has no large personal political machine. He won his support from Californians largely by keeping his 1942 campaign promises and giving the state an honest, competent, and progressive government.

Among other characteristics, the tall, white-haired Californian delights in proving that politicians are wrong about politics. He demonstrated this first by winning

the governorship in 1942 in the midst of the war, the Roosevelt era and a top-heavy Democratic registration in California. California law—which allows a candidate to run on more than one ticket—was made to order for Warren, who views the governorship as a non-partisan office.

On the national scene, he has fitted into the limelight and then out again at two Republican presidential conventions. He was a nominal “favorite son” candidate in 1936 and again in 1944, when he turned down the offer to run with Dewey.

Since 1944, Warren has been active in

convening Western governors on mutual problems and on the executive committee of the National Governors Conference.

As an individual, he is a family man, devoting most spare time to his wife and six children—three boys and three girls.

NATIONAL CONVENTIONS

Both Democrats and Republicans hold their National Conventions in Philadelphia this year; the Republicans the week beginning Monday, June 21 and the Democrats beginning Sunday, July 11.

ROLE OF POLITICAL PARTIES IN AMERICAN PUBLIC LIFE

by PROFESSOR EDGAR EUGENE ROBINSON

Professor of American History, Stanford University

Author of “The Evolution of American Political Parties.”

Party Realities in the United States

POLITICAL PARTIES ARE ACCEPTED by all Americans as an indispensable feature of the American way of life. The American people conceive of parties as bodies of voters making decisions at stated election times. They accept the two-party system as fundamental. (And they speak of parties as armies using the language of warfare to describing their activities.)

But parties in the United States are also seen as organizations with elaborate and intricate machinery, acting through party representatives in the Presidency, in the Congress, and in thousands of offices in the local, state and national structure. Moreover, these parties appear as custodians of traditional political doctrines, and as exponents of current political platforms and policies. In short, political party has a varied meaning in all contemporary discussion. “Third parties” with unusual purposes and usually temporary status are accepted as necessary, though adding to the confusion of the issues. No one doubts that the political party in the United States is what the voter makes it, for his own use, and for the advancement of such interests as he has in conjunction with his fellows.

In philosophic terms, there have been political parties embodying the belief in the primary importance of leadership (Federalist, Whig, Republican); and those that put their greater faith in the masses of men (Democrat, Populist, Progressive). In economic terms, there have been parties devoted to particular interests (Socialist-Labor, American Labor, Sugar Planters); to particular programs (Public Ownership, Single Tax, Greenback, Free Silver); to sectional needs (Southern Rights, Constitutional Union, Populist). In humanitarian terms, there have been parties devoted to the program of care for needy, helpless, disfranchised (Prohibition, Liberty, Free Soil). In class terms, there have been parties that boldly advanced the programs of class advantage (Native American, Socialist, Communist). But throughout the evolution of the American political party to its present stage of development, the determining characteristic of the “two-party system” has been the ability and skill of American party leaders in combining appeals of various kinds, legislative programs, special interests, and humanitarian purposes into one general support of a candidate for the Presidency, with, of course

supporting majorities in the Congress. To this end, party organization, which in the U. S. is extra-legal, has become the most powerful force in our political life.

Early Manifestations of Party

The roots of party life are deep in our early history as an independent people. At the outset, in the American Revolution, the Continental Congress was in reality the convention of a political party. In origin it was the creation of extra-legal committees (in the separate colonies) at no time acting under a grant of authority of any kind, and made up of men who, whatever their differences, were a unit in agitation for a general political purpose.

The great pronouncement of this Congress, the Declaration of Independence, was the platform of a political party. It was a statement of general principles. It aimed to win supporters to the cause of independence. Its sponsors did not conceive of it as descriptive of the reality of government at the time. It has been in subsequent days that this document has been made to fit a role for which it was not intended. The difficulties which accompanied attempts to realize some of its pronouncements remind one of the difficulties that frequently attend the transference of campaign pledges into statute law.

The second great political party in America met in the Constitutional Convention of 1787. It met to propose a solution for governmental chaos. The "Fathers" who prepared and presented the Constitution for the consideration of conventions in the various states were not the same "Fathers" who had led the party of Revolution. Nor did they rely on the same medium for action. Whereas the party of Revolution had worked outside of the usual forms of election under the laws prevalent in the states, the party of the Constitution was content, after the preliminary impetus (in extra-legal groups) to attempt to carry its will through the medium of the various state governments, in accordance with the practices and voting restrictions of these states. It set the tone of party action within law.

Parties in Congress

Nevertheless, at the beginning of the national government in 1789, despite early

manifestations of party activity, party organizations did not exist. But political divisions in the Congress appeared in the first administration of George Washington in terms of legislative programs and of leadership in the national government. Federalists came to support the Executive, and Anti-Federalists, to oppose. This alignment first appeared among the voters in the election of 1796, and was more clearly marked as the Federalist versus Democratic-Republican division in the "revolution of 1800" which placed Thomas Jefferson in the Presidency.

From the inauguration of Jefferson in 1801, to that of Jackson in 1829, the party struggle is most clearly seen in terms of the growing sectional divisions (East, West, South). The central theme of discussion was the extent of federal power, and it occupied the Congress, and gave successive Presidents their place in party history. But in truth it was an era in which factions in states and in Congress—and among the voters—precluded a full development of national political parties. National party organization and its great agency, the national convention, had yet to appear. But the party division in Congress and among the limited number of voters continued Federalist versus Democratic-Republican until 1820. It was natural that such should be the case as long as the practices of pre-Constitution days dominated in the states, where impermanent groups gathered together for transitory purposes, and as long as the electorate continued to be dominated by men who had been colonials and subjects of a king.

By the end of the third decade of the nineteenth century, however, the United States of America had grown to a population of thirteen million in a federal union of twenty-four states. Manhood suffrage had become an accepted fact. The exclusion of Negroes from the franchise, as well as the existence of property qualifications in a few of the states, did not greatly mar the picture of a democracy as seen by the average American in 1830.

The division of the voters of the country in the election of 1828 reflected the division in the Congress since 1825, where the parties were Jackson and anti-Jackson.

This acceptance of personal leadership as the determining factor in party allegiance seemed to spell the doom of all clear-cut party development in terms of constitutional doctrine. It laid the basis for divisions within parties of the next thirty years, although the term "Democrat" came to be applied to followers of Jackson, and for a time, "National Republican" included his opponents.

Parties as Voters

The pathway taken by the advocates of Andrew Jackson in bringing him to the Presidency was open to all because of the flexible pattern of American constitutional procedure and the freedom accorded the voter. Consequently there appeared from time to time the Anti-Masonic party, the Liberty party, the Free Soil party, the Native American party, and many others. These "third parties" held conventions, placed nominees before the voter, marshalled adherents at the polls, but never attained the Presidency and seldom elected nominees to the Congress. But they were an avenue of expression for thousands of "free Americans."

In the meantime, the Whig party, which after 1835 came to absorb the National Republicans, and the Democratic party, each a coalition of various interests—economic, social, political, sectional—battled as the "two parties" for control of the national government. On the whole, the Whigs were representative of large business units, the banks, and the "conservative" elements. The Democrats included the mechanics, the small farmers, the small businessmen, and some radicals. Though the Whigs tended to support high tariffs and the Democrats, "free trade," neither party was a unit on the question of slave power and neither party had a consistent record on public land policy nor on internal improvements.

Despite loud protestations of leaders that the Democratic was the party of the common man, the party gave large support to leadership as a primary factor in practical politics. The Whigs, admittedly the party of the upper classes, yet drew considerable support from the middle class, particularly in the rapidly growing Middle West. Both parties, being coalitions of var-

ious interests, were really not representative of single class nor particular economic interest. With the diverse support they were able thus to mobilize, the Whigs and Democrats, in the Presidency and the Congress, alternated in governing the nation until the inauguration of Lincoln in 1861.

Sectional Division

In the election of 1860 the national alignment of voters, as well as the statements of party leaders and their platform declarations, revealed the actual position of political parties on issues. The Democratic party split over the issue of slavery extension, and two candidates appeared at the polls—Stephen A. Douglas and John C. Breckinridge. The Whig party had lost its place to the newly created Republican party, and the middle of the road appeal on the matter of slavery was presented in the candidacy of John Bell (Constitutional Union party). Lincoln, the nominee of the Republican party, which had had its first presidential nominee, John C. Frémont, in 1856, stood on a platform that opposed the extension of slavery, but did not propose to interfere with slavery in southern states. The party was pledged to free homesteads, a protective tariff, and a transcontinental railway. The decision at the polls in November of 1860 did not give Lincoln a majority vote, nor a majority control in the Congress. But the plurality in the electoral college made him President-Elect.

Party Organization 1864-1904

The Republican party was given control of the Congress by the secession of southern states, but narrowly missed loss of control of the House of Representatives in the mid-term elections of 1862. Only by a National Union ticket in 1864 (Lincoln and Johnson) did the Republican party keep control. From this election to that of Theodore Roosevelt in 1904, the Republican and Democratic parties fought out their battles before the electorate, first upon issues that arose out of the war; second, on economic questions that came to be of pressing importance in the rapidly developing industrial society; and third, upon questions that arose out of the expansion

of the nation beyond the continental United States.

The Republicans retained the office of the President except for eight of the forty years (Grover Cleveland 1885-89, 1893-97), but the House was under the control of Democrats for sixteen years (1875-81, 1883-89, 1891-95). Only for eighteen of the forty years were Republicans in control of both houses of the Congress and of the Presidency, a power that the Democrats never enjoyed except in the two years 1893-1895.

Throughout the forty years the Democratic party carried the incubus of having been associated with "rebellion," and the Republican party, as evidenced in its succession of Civil War heroes in the Presidency, profited from the reputation of having "saved the Union." Inevitably, after the withdrawal of federal troops from southern states, the "Solid South" was a political unit in all elections. The Democratic party under the leadership of its one President in these years (Grover Cleveland) became the agency of tariff reform, termed "free trade" by its opponents. The Republican party, emerging from the war years as the party of industrialists and financiers, became more and more the party of high protective tariffs.

By the middle of the period it was clear that party power in the United States was exercised by two extra-legal party organizations. The national committees of these organizations were all-powerful, not only in choosing and controlling nominees, but also in determining party declaration, and often in the political action of their representatives who attained public office. It became increasingly evident to Democratic and Republican voters that within each party membership there must be developed greater powers to combat the autocratic powers of party bosses. The call for more democracy referred as much to party procedures as it did to partisan programs.

These years were marked by the repeated evidence of compromise on the part of national organizations. Yet at the end of the period, as at the beginning, the Republicans were nationalist, expansionist, and industrialist, and the Democrats were inclined to oppose in each of these fields.

The forty years (1864-1904) witnessed

numerous movements of reform and parties of protest. Those interested in Civil Service reform brought the Liberal Republicans into the campaign of 1872. Monetary reform brought the Greenback party of 1880; relief for the farmer brought the Populists of 1892. Near the end of the period there were indications that sporadic movements representing labor, such as Anti-Monopoly in 1884 and Union Labor in 1888, would be displaced by more permanent forms of party organization. The Socialist Labor party appeared in 1892, and in 1900 the Social Democratic (forerunner of the Socialist) first appeared in a national election.

The platforms of third parties, so important in indicating the direction of American thinking, were seed beds for the development of ideas later taken over by the "great parties." This is seen in the capture of the Democratic party by the "Silverites" in 1896. But throughout the period less spectacular adaptations were made, and in view of the ever-present need of each of the parties to win support in all parts of the country and amid all types of voters, it became an accepted procedure not only to balance East and West in appeal but also to embody in platforms appeals to the conflicting economic interests on tariff, "trusts," and currency. More and more, Congress became the arena not only for the battle of sections, but also for the conflict of classes, and the Presidency an office in which the premium went to a man skilled in adjustment and compromise—and leadership in coalition.

Party Life in the United States

Down to our own day, American political parties have flourished as agencies for the expression of public opinion, and as agencies for the selection and support of men who hold public office. Operated by men not elected by the people, parties have been responsive to public pressure only as their actions were subject to the vote of the people in elections in which party candidates appealed for votes. Yet these parties, as they aspired to control the national government, or as they achieved that control, of necessity have accepted the leadership of men who appear before the

people as their chosen leaders to achieve desired results in the operation of government and in the advancement of social welfare. Party managers have kept parties alive, but Presidents have given them substance and meaning.

Quite outside of party organization, the past ten years have witnessed the most phenomenal growth of political activity on behalf of Labor, for example, the American Labor party in New York State. This has been in self-defense because of the increasing power of special interest "pressure groups." Lobbying in some form has been characteristic of American politics since the days of Alexander Hamilton. But in the past fifty years, despite laws restricting the activity of lobbyists and much unfavorable publicity, it has reached a point where political party organization in Congress is frequently at the mercy of elements responsive to relatively small but powerful elements of the population (American Legion, National Association of Manufacturers). Frequently the same principle of threat has been transferred to action against party organization outside of the Congress, and thus special interest political activity groups have achieved a more powerful place in the drama of American politics (American Federation of Labor, Political Action Committee).

Characteristics of Party Activity

There are five aspects of American party practice that continue to baffle all students of politics and to mislead many foreign observers. Each is based on the fundamental conditions of American political life, and each has developed in the actual experience of American public men.

(a) The fact that the presidential vote is cast by states, and the fact that the electorate is spread over a continental area make it inevitable that a successful national party organization must come to terms with the powerful state parties. At the same time, because of the weight of even the smaller states in the electoral college, the national organization must have an appeal to voters in every section of the country. This explains the importance of New York, Illinois, Ohio and California machines in national strategy. It also ex-

plains the importance given by both parties to the seemingly small percentage of the vote in certain small states both east and west. Nevertheless, neither a class nor an economic interest has yet a truly national basis. The agrarians have frequently found this to be the case, and the protective tariff has had to be defended in a different way in different parts of America.

(b) It is clear that only as the successful party has been a coalition of interests and of factions, has it an opportunity to function in office. Likewise, only as the opposition party has had a great vote of protest has it furnished the necessary weight in Congress to prevent extreme measures by the party in power. Just as, thus far, a class party has been unthinkable in office in America, so, too, it is unlikely that a powerful vote of opposition will disappear. The experience of the past twelve years is the surest proof of that.

(c) Always important in the functioning of democracy, battles within the two parties have grown increasingly important since the opening of the twentieth century. Often when it is said in despair that the final struggle in November is a sham battle, it has been forgotten that the primary struggles have been productive of definite result, and that preceding the election under our representative system, the battle on issues has been narrowed to an area in which there can be productive result. This was true in the preliminaries of the battle of 1896 and of that of 1912.

(d) Rule by party caucus in each house of Congress is an essential of party success in legislation. Yet, again and again, insurgents have successfully thwarted party rule—as dramatically demonstrated by Senator LaFollette and other western Republicans in 1924. Yet in 1925 the attempt of the Republican caucus chairman to bar them from party councils was in vain, because votes were necessary to organize the Congress. The call of Secretary Wallace in 1945 to bring unity in Democratic party action by expelling "insurgent" Democrats was unavailing. Presently Wallace himself was cast in the role of insurgent.

(e) Party unity is hard to attain in the United States for a reason peculiar to our acceptance of party designation by states.

A Republican in the suffrage of Nebraska or California, or a Democrat in the suffrage of Maryland or Georgia need not be acceptable to a President of the named party. As long as voters of the state support the incumbent—as a party man—the national leader and the national committee protest in vain. This often makes a mockery of party platform, and defeats an effort to enact party program. The successful insurgency of George W. Norris and the independent position frequently taken by Democratic senators during the past decade are manifestations of the difficulties facing leaders in the Presidency.

The Presidential Campaign of 1948

Two powerful party organizations exist today, and function in every section of the nation. From the smallest voting precinct to the national electorate, they are bend-

ing every party effort to win the presidential contest of 1948. At least one hundred thousand men and women are devoting all of their attention to this; a million or more are giving considerable time to it. Large sums of money carry the financial burden of these activities. Those in charge have political relations with thousands of individuals and organizations that are affiliated with the party or are expected to be. Millions of voters are receiving publicity on current questions, and are expecting to vote party tickets. Within this mass of voters of such size, there are many political beliefs, countless political proposals, and innumerable party planks. The platforms are in the making; the leaders are jockeying for position; and the voters are preparing to vote for party candidates for offices local, state and national.

MINORITY PARTY MOVEMENTS IN THE UNITED STATES

by HARRY W. LAIDLER

Executive Director, League for Industrial Democracy

Author of "Social-Economic Movements."

IN 1854, THE REPUBLICAN PARTY AP-
peared on the national scene as a
minority political party formed to grapple
with the problem of slavery. It rose
rapidly in political stature, and in 1860
was able to secure the election of its
candidate, Abraham Lincoln, as President
of the United States. Since those days, the
presidential chair has been occupied alternately
by representatives of the Republican and Democratic parties. No third
party has risen to the rank of a major political
party in the nation as a whole.

On the other hand, numerous municipal,
state and national parties have developed,
have won local victories, and have exerted
a profound influence on the political thinking
of the country, on the platforms of the
major parties, and on city, state and federal
legislation.

In the national field, before the turn of
the present century, among the minor political
parties which made their appearance
were the Land Reformers in 1872, the
Greenbackers in 1876, the United Laborites
in 1888, and the Socialist Laborites, the
Populists and the Prohibitionists in 1892.

In 1878, the Greenbackers, with their program
of currency reform, secured over a
million votes, while 14 years later this
record was duplicated by the Populists.
Most of these parties regarded the manipulation
of the nation's money and credit as
the root of all evil, though the Socialist
Labor party insisted on the need for an
entire change in the economic system.

In 1900, Morris Hillquit and other active
members of the Socialist Labor party,
critical of the anti-A. F. of L. policy of
the S. L. P., the attempt of Daniel DeLeon,
its chief figure, to impose too rigid a discipline
on its membership, and the party's failure
to give sufficient attention to immediate
reforms, split from the S. L. P. and joined
with Eugene V. Debs of Indiana, Victor L.
Berger of Wisconsin and others to form
the Socialist party. They nominated Debs,
former president of the American Railway
Union, as candidate for President in the
1900 campaign and the following year
completed the structure of the party.

Debs received in 1900, 96,878 votes. Four
years later the vote quadrupled to 402,000;

in 1908, it remained at about this figure, and in 1912 doubled again to 900,000. The dues-paying membership of the party grew during those years from 16,000 in 1903 to 118,000 in 1912, in which year there were more than a thousand party members in public office, among them 56 mayors, over 300 aldermen, a number of state legislators and one congressman. Among the cities controlled by Socialists was Milwaukee, Wisconsin, which remained in the Socialist column until 1938.

The party's influence during these years in the trade union movement was considerable. Socialists founded many trade unions and in 1912 secured for their candidate, Max Hayes, one-third of the votes cast for president of the A. F. of L. The party during that period also did a vast educational work through its literature, and lectures in behalf of a socialistic order of industry "under which the principal industries of the country would be publicly owned and democratically managed for the common good."

It likewise did much to promote labor and social legislation. In its platforms of those days it advocated and did effective pioneering educational and political propaganda for many measures which were later adopted and enacted into legislation by the major parties, such measures as those in behalf of women suffrage, progressive income, inheritance, corporation and franchise taxes, workmen's compensation, old age pensions, unemployment insurance, a minimum wage, a shorter work week, the abolition of child labor, effective factory inspection, conservation of natural resources, public works for the unemployed, the curbing of the power of the courts to issue injunctions in labor disputes, the establishment of a department of labor, the expansion of public educational, health, and recreational services, and the increase of public ownership of electrical and other utilities.

The party likewise gave the initial training in social action to tens of thousands of men and women who later became significant forces in the life of the nation.

In 1912, the party found many of its immediate demands included in the platform of the Progressive or "Bull Moose"

party which had been initiated by Robert M. LaFollette and others, but which later passed under the leadership of former President Theodore Roosevelt. The advent of the Progressive party on the ballot in 1912 led to increased interest in social legislation, while assuring the election of Woodrow Wilson and the defeat of William Howard Taft. Although Roosevelt in this campaign received nearly $4\frac{1}{4}$ million votes, 700,000 more than Taft, the Progressive party, later deserted by its standard-bearer and many "Roosevelt Republicans," soon passed out of the scene of action.

Following 1912, the Socialist party became weakened by the fight between the more moderate elements and William D. Haywood, head of the Industrial Workers of the World, and his followers, who advocated sabotage and direct action as a means to social change. In this fight the advocates of democratic, parliamentary socialism were victorious and Haywood was expelled from the party. In 1916, before America's entrance into the World War, the party candidate, Allan L. Benson, a well-known writer, campaigned on a platform against war and militarism, receiving a vote of 585,000.

Following America's entrance into war, the party adopted an anti-war resolution at St. Louis. This led to action against many Socialist officials, and Eugene V. Debs was imprisoned for delivering in Canton, Ohio, an anti-war address. The stand of the party led to the resignation of a number of prominent Socialist writers, and the party suffered politically in many parts of the country. In New York City, however, it conducted in 1917 one of its most popular campaigns under the leadership of Morris Hillquit, electing a dozen city and state legislators.

After the war, the party's strength was sapped by a split within its ranks in 1919 over the Communist issue, but in 1920, Debs, the party's presidential candidate for the fifth time, campaigning from prison—Woodrow Wilson having refused him a pardon—received a vote slightly larger than that of 1912.

In the same elections, the Farmer-Labor party, in its only presidential campaign, nominated Parley Christensen as its stand-

ard-bearer, and ran up for him a vote of 265,000, against 919,000 for Debs.

After the election of Harding to the Presidency, there developed in the ranks of labor, particularly among the railroad workers, a demand for a higher status for the nation's workers. Labor began to talk in terms of nationalization of railroads and other utilities, of improved social legislation, and of independent political action. It followed closely the growing successes of the British Labor party, and formed in a number of instances local Labor and Farmer-Labor parties.

In 1921, several groups among the machinists, the Railroad Brotherhoods and other unions, joined with the Socialists in the organization of the Conference for Progressive Political Action. The Socialists joined the Conference in the hope that the movement thus started would ultimately lead to the formation of a nationwide labor party in opposition to the Republican and Democratic parties.

In 1924, the Conference issued an appeal to labor unions, farm organizations and other progressive groups to send delegates to a convention to be held at Cleveland on July 4, to select a national ticket.

The nomination of Calvin Coolidge, as Republican candidate and of John W. Davis, legal adviser of the House of Morgan, as Democratic candidate for President, had brought bitter criticism from many erstwhile supporters of the old parties, and delegates poured into the convention hall from all over the country.

The convention unanimously nominated Senator Robert M. LaFollette for President and Senator Burton K. Wheeler for Vice President. It adopted a platform which endorsed the demands of organized labor on injunctions and living standards, denounced monopoly, advocated public ownership of water-power and railways, strict public control of all national resources, and recognition of agriculture as the basic industry of the country and which urged the abrogation of the power of the Supreme Court to nullify legislation. LaFollette during the campaign declared that the two old parties were "in a condition of moral bankruptcy."

Farm and labor organizations throughout

the country endorsed the LaFollette ticket and over 4,750,000 votes were cast for the Progressive candidates—considerably more than was expected at the beginning of the campaign.

Socialists and many other Progressives strove to follow up this campaign with the organization of a permanent Progressive farmer-labor party. But LaFollette, a very sick man, was unable to give the movement any aid. Many of his political supporters returned to the two old parties, and when a special convention was finally called on February 21 and 22, 1925, the Railroad Brotherhoods and numerous other labor representatives at the convention declared that they had decided to return to their policy of non-partisanship. A number of delegates met in a reconstituted convention and passed a resolution to form a new party. But the Socialists refused to take part in it, Morris Hillquit characterizing the convention as "little more than a motley array of advocates of heterogeneous political nostrums with a sprinkling of dubious farmers' organizations and liberal progressive groups without constituencies." The most promising progressive third party movement of the first quarter of the twentieth century thus passed into history.

The Socialist party continued its activities and ran Norman Thomas for President in the next five elections.

In the 1928 elections, the Socialist vote decreased to 267,000. In 1932 it advanced to 885,000. In 1936, however, there was a further split in the movement over united front activities, those withdrawing from the party forming the Social Democratic Federation. This split and the popularity in the ranks of labor of President Roosevelt caused a decrease in the 1936 vote to 187,000. In 1940 and 1944 the vote further decreased to 117,000 and 81,000 respectively.

During these years the party continued to advocate the formation of a mass party of labor, farmers and Progressives. In 1946, the party sent representatives to a National Education Committee for a New Party, an informal group with official and unofficial representatives from trade union, farmer, cooperative, educational organizations, from the Liberal party of New York and from the Social Democratic Federation.

The Socialist party in the Forties continued to mark up several successes in municipalities in Wisconsin, Pennsylvania, Connecticut and other states.

During the last generation, another minority movement, the Communist party, has been active on the political scene. Following the bolshevik revolution, many left-wing members of the Socialist party joined with recently admitted members of the foreign language federations to demand that it affiliate with the Third or Communist International.

This demand was refused by the party's executive committee, and, after a vain attempt to "capture" the Socialist party machinery, the dissenters met in Chicago in late August and early September, 1919 and organized the Communist and Communist Labor parties. The Communist party was dominated largely by Slavic and other foreign federations; the C. L. P. by American Communists. Both groups felt that the country was in the midst of a revolutionary crisis. The C. P. platform declared that the party should ever "keep in the foreground its consistent appeal for proletarian revolution, the overthrow of capitalism and the establishment of the dictatorship of the proletariat."

Shortly after their conventions, both Communist parties were driven underground by the officers of the law. The Communist Labor party in 1920 merged with a section of the Communist party, and formed the United Communist party. For a while the remaining group in the C. P. refused to unite with the United Communist party on the ground that the latter had cooperated with "the reactionary" I. W. W., was "permeated with bourgeois-pacifist ideology," and could give no assurance to its membership that it would remain an illegal, underground organization.

Early in 1921, the U. C. P. formed a legal counterpart, the American Labor Alliance. That year also the Communist party leaders organized the Workers party as their above-ground representative though the C. P. continued for some time its illegal existence. In August, 1922, many of their delegates, attending a "secret" convention in Bridgman, Michigan, were trapped by

federal officials, and, on April 7, 1923, Communists announced the liquidation of the underground Communist party. In the meanwhile differences between the U. C. P. and other Communists were ironed out and the U. C. P. joined the Workers party.

In 1924 and 1928, the Communists entered the presidential campaigns with William Z. Foster as their standard-bearer, receiving 33,000 in the former year and 48,000, in 1928. In 1927 the party changed its name to the Workers' (Communist) party, and in 1928, returned to the original title of the Communist party.

In the late Twenties, bitter factional fights took place between the majority faction in the party, led by Jay Lovestone and Benjamin Gitlow, and the minority faction headed by William Foster. The minority accused the majority of failing to realize the imminence of the revolution in the United States. The majority evolved the doctrine of "exceptionalism," declaring that, while a revolutionary crisis might be developing in other countries, the United States should be regarded as an exception. The Communist International, however, sided with the minority group; pointed to numerous incidents in the United States which indicated to it that a revolutionary situation was developing; ordered the party to change its executive committee and demanded that Lovestone proceed to Moscow, in order that he may be able to secure a clearer view of the forces at work in America. When, however, on his return from Russia, Lovestone had not changed his viewpoint, he was expelled from the party together with Ben Gitlow, former vice presidential candidate, and a large number of his followers. In July, 1929, those expelled formed the Communist party of the U. S. A. (Majority Group) which disappeared after a few years. A year before, another group, led by James P. Cannon and Max Schachtman, were purged for their efforts to organize the Communist League of America (Opposition), a Trotskyite group.

In the early Thirties, the Communist party continued its bitter attacks on Socialist and other organizations which were dedicated to democratic social change. In 1932, Foster, presidential candidate, de-

clared that "in all its parliamentary activities the Communist party makes it clear to the workers that the capitalist democracy is a sham and that there must be no illusions about peacefully capturing the slate for the working class."

In 1935, however, after the change in the tactics of the Comintern, the Communist party under Earl Browder urged united action of all democratic groups in the fight against fascism. Instead of declaring capitalist democracy a "sham," he maintained that the Communists were ardent believers in democracy. Following the German-Russian Pact in 1939, the Communists reversed their policies again, criticized the Second World War as an imperialist war, and urged, "not a cent, not a gun, not a man for war preparations and the imperialist war."

When Russia was invaded, however, the party declared that the war had been transformed into a crusade for democracy and threw its support to its prosecution and to the election of many candidates of the Democratic party who were backing "The government's win-the-war policies."

On May 22, 1944, the party transformed itself into the American Communist Political Association and Earl Browder, its new president, astonished many friends and foes alike by declaring that in the war and immediate postwar period the party would regard "any plans for American postwar reconstruction which are based on the introduction of socialism" as, "in effect a repudiation" of the aim of American Communists to unite the majority of the nation behind the Teheran policies. During the ensuing elections the communists supported President Roosevelt for re-election.

The following year, however, there was another shift in Communist tactics. In April, 1945, Jacques Duclos, secretary of

the French Communist party, published an article denouncing Mr. Browder and the American Communists for swerving "dangerously from the victorious Marxist-Leninist doctrine." Following the publication of this article, the party was reconstructed and Browder was stripped of his authority and replaced by William Z. Foster as the new leader of the party. A special convention at the end of July unanimously endorsed the new leftward trend and on January 14, 1946, Browder was expelled from the party "for gross violation of party discipline, for developing factional activity and for betraying the principles of Marxism-Leninism and deserting to the side of class enemy American monopoly capitalism."

In 1947, the party agitated for the organization of a mass party and many Communists were active in New York State in the American Labor party. After the establishment of the Cominform, the party, while approving most of its policies, refused to join the new Communist international body, on the ground that affiliation would be used by reactionary forces as a means of weakening progressive movements. The party during these years received a comparatively small vote for its presidential candidates as follows: 1928—49,000; 1932—103,000; 1936—80,000; 1940—49,000. In 1944, no Communist candidate was nominated. In this year, the Socialist Labor party, which still survived, obtained 45,000 votes. Trotskyite groups, though active, had no national candidates.

Throughout 1947, there was much talk of a possible new third party movement, led, possibly, by former Vice President Henry A. Wallace. Students of politics, however, saw little chance of forming a large third party of the type of the Progressive party of 1924.

With the turn of the century our political history was resolved into a contest between the Republican and Democratic parties and since 1900 they have been custodians of the country's affairs. What they have done with this custody and whether they are entitled to it now is something we think of vital interest to voters. The following section is devoted to a narration of party records, a history of issues and an analysis of the economic and social conditions creating these issues. Overlapping is inevitable for two reasons: we wanted to give the varying viewpoints of the contributors a fair hearing, and we didn't want to risk omissions.

ECONOMIC AND SOCIAL BACKGROUNDS OF ELECTIONS

by

LOUIS M. HACKER

Assoc. Professor of Economics, Columbia University
Author of "The Shaping of the American Tradition"

—1900-1904—

THE END OF THE NINETEENTH CENTURY and the opening of the twentieth constituted a new beginning for the United States. These were the outstanding characteristics of the changing scene. First, the United States had become industrialized: in fact, it was the world's leading producer of iron and steel; possessed the world's greatest railroad net, and was beginning to challenge Great Britain's supremacy in world markets. Second, agriculture's efforts to reassert itself and recapture political leadership—a leadership it had lost as a result of the Civil War—had failed in the election of 1896. On an essentially agrarian platform, which talked free silver but which also expressed concern over the growing power of integrated industry and finance, Bryan as the standard-bearer of the Democrats had sought heroically to reinstall Jeffersonian principles—with a difference—in American public policy. His defeat was more than a personal one. It had indicated that the old alliance between South and Middle West could no longer function. It had proved that farmers represented a minority interest. And it had ended for all time the free-silver debate as a burning public question. (The Currency Act of 1900 put the United States on a gold standard.) Third, the American frontier was gone. No longer, in an actual or psychological sense, could Americans look forward—if economic mischance occurred in other areas—to escape into frontier zones to begin life

anew as pioneering farmers. The United States no longer was a new country; and farming, increasingly, was requiring a sizeable capital investment for its engagement. Fourth, America's immigration host was changing radically. The difference had become manifest in the late 1880's; it was to become pointed up sharply after 1900. Now immigrants from central and southern Europe—talking strange tongues and with lower standards of living—were to pour into the United States. They were to become urban dwellers instead of rural settlers; they were to be pressed into sweatshops; they were—for the time being—to remain passive in the trade unions' efforts to organize the American worker. Fifth, American industry was just beginning to become corporate, impersonal, integrated, finance-dominated. Up to 1900, the original Captains of Industry—the Carnegies, Rockefellers, McCormicks—had personally owned and managed the companies they had created. Popular opinion to the contrary, as a group they had not been hard taskmasters. They had modernized steel, machine tools, agricultural implements, oil refining, reducing costs and lowering prices. They had had a vision of mass production and of a great domestic consumer market. And they had helped in its realization by raising wages. By 1900, the *real* wages of the American worker were twice those they had been in 1850. The American worker had the highest standards of living in the world.

But these Captains of Industry had grown old by 1900; and control over their businesses passed into other hands. From 1897 to 1904 there set in a great movement of industrial consolidation and refinancing. Then it was that Big Business was really born—when the Standard Oil of New Jersey, American Telephone and Telegraph, the International Harvester Company, United States Steel made their appearance. Greatest of all—and epitomizing the new age—was the last. Formed in 1901 and combining most of the important light and heavy steel companies in the country, the United States Steel Corporation was the country's first billion-dollar corporation. Bigness alone was not the only hallmark of the change. The companies had been reorganized by investment bankers—J. P. Morgan; Kidder, Peabody and Co.; the Moore Brothers; the National City Bank; Kuhn, Loeb and Company. These banking groups dominated business policy. In fact, it was popularly claimed, there were two great financial empires in the United States whose influences proliferated into every significant aspect of the American economic life—the railroads, public utilities, shipping, heavy industry, money and banking. And these were the Morgan and Rockefeller Empires.

Sixth, the United States had become a

world power. As a result of the annexation of Hawaii, the defeat of Spain, and the easy victories of the American Navy, the United States ended the nineteenth century not only with an overseas empire—Hawaii, Puerto Rico, the Philippines—but with world interests. We had responsibilities for maintaining world peace and a balance of power among European nations; we had Caribbean interests and the building of a Panama Canal was now more than an academic question; we were alert to pressures on China's sovereignty and were determined to keep opportunities open equally to nationals of all countries—the Open Door policy.

These new forces and drifts were reflected in American political debates. In the election of 1900, the Democratic party spoke the tongue of Small Business, Little Americanism, and state intervention; the Republican party, Big Business, oversea expansion, and a state hands-off policy. The tariff and silver questions were subordinated to the question of so-called Imperialism, which Bryan named as the "paramount" issue of the campaign. It was an easy victory for McKinley and not too difficult an administration for Roosevelt, who succeeded to the Presidency in September, 1901, when McKinley was assassinated.

CAMPAIGNS AND ADMINISTRATIONS

By Thomas L. Stokes

JUST BEFORE THE TURN FROM THE 19th to the 20th century there began what might be termed the Third American Revolution.

The First American Revolution was that, of course, which freed us from England. The Second Revolution was our own Civil War which shifted political power from the agricultural South to the industrial East, North and Middle West. Economic power had shifted in that direction already. Negro slavery was abolished in the process.

After the Civil War, industrialization created a new sort of economic slavery, affecting both whites and blacks. For a people still accustomed to think of land in plenty and jobs for the asking, the awakening was slow. It came, with a jolt, toward

the end of the century to start the Third American Revolution which still goes on. Generally it has been peaceful.

Its object is to accommodate our society to the industrial scheme so that its benefits can be distributed broadly, and as equitably as possible, to the people. The instruments were at hand in government. The idea was to arouse the people to use them and strengthen them. The owners and managers of our industrial economy, who were found to be very strongly entrenched in government themselves, naturally resisted. This provoked the conflict which is here called the Third American Revolution.

This economic-political warfare was opened by William Jennings Bryan in 1896. A reaction followed in the McKinley Ad-

ministration. The tide moved forward again under Theodore Roosevelt, after which there was a pause in the Taft Administration. Again, under Woodrow Wilson, there was another advance. Thereafter came the longest halt during the Twenties, beginning with Harding, in 1921.

In the protracted Franklin D. Roosevelt Administration, the most profound changes thus far occurred in the relation of our government to its people. This was cut short by the Second World War and another reaction.

At its very outset, the forces of conflict in our revolution were disclosed dramatically by economic conditions. A revolution is set off most easily by a catastrophe of some sort. This was provided in our case by the 1893 depression when factories were closed, men were turned out on the street, farm prices fell.

There were 15,000 business failures with total liabilities of \$347,000,000; 574 banks closed; 156 railroads were in the hands of the receivers. In 1893 there was the bloody strike at the Carnegie Steel Mills in Homestead, Pa., and in 1894 the Pullman strike in which President Grover Cleveland intervened and out of which there emerged a new figure, Eugene Debs. Revealing the power of private finance and the money masters of that era, President Cleveland had called in J. P. Morgan to the White House to negotiate a private loan to stop the gold run on the Treasury. The venture was quite profitable to the financier and, as an index to the psychology of the times, made him somewhat of a hero. Just at the turn of the century our first billion-dollar corporation appeared when J. P. Morgan formed the United States Steel Corporation. This topped off a series of mergers and trusts that controlled important natural resources and raw materials. Congress had passed the Sherman Anti-Trust Act, but it was not taken seriously, either by finance and industry or by government. Wages of mill and factory workers averaged nine and ten dollars a week around the turn of the century.

For a capsule history of the Third American Revolution and its achievements, one only has to look back to Grover Cleveland and see how he did nothing with the

instrumentalities of national government to try to check the 1893 depression. He would have shocked himself and most other people if he had even considered such a thing. Now look forward forty years later and see how Franklin D. Roosevelt, in 1933, marshaled all the instruments of national government to meet the depression of his time and, at the same time, acted to raise the farmer and city worker to new positions of power and privilege more commensurate with their services, by using agencies of the national government, or creating new ones.

Bryan's 1896 revolution was agrarian, based on a fusion of South and West. The Bryan threat spread terror among the financial and industrial overlords of the East because of his amazing ability to inflame the masses. It was only beaten back by Mark Hanna's skillful use of the largest campaign fund yet raised by any political party and by the clever "full dinner pail" promise to workers coupled, as the latter was, with hints that factories would close if Bryan were elected. Though thwarted, the Bryan revolution had an influence on all that has followed since.

THE ANTI-IMPERIALISM, ISOLATION-ism and pacifism of the Democrats in 1900 were manifest in platform declarations against involvement in world politics, against what they labeled the "ill-concealed Republican alliance with England," in their condemnation of England in the Boer War, and in their support of a small standing army. On economic issues, both parties were against trusts and both were for federal legislation for reclamation in the West, though Republicans held a reservation that control of water be left to the states. Revealing their new interest in industrial labor, Democrats advocated creation of a federal Department of Labor. Republicans proposed a Department of Commerce and Industries. Republicans espoused the protective tariff, while Democrats condemned the opposition party's last sample in the 1897 Dingley tariff act that had boosted industrial rates still higher. The Democrats lost with Bryan. The Republicans won with President McKinley.

He was only six months in his second Administration when his career was ended precipitately by an assassin's bullet at Buffalo, where he had made a speech on tariff reciprocity—the germ of the reciprocal trade idea that Democrats revived so successfully many years later. Theodore Roosevelt stepped into the Presidency at the age of 43. This act of an unkind fate alarmed G.O.P. elders, and upset their plans. They had maneuvered his nomination as vice presidential candidate to remove the headstrong young man from the governor's mansion at Albany. Now he was out of his cage. It was not long before he broke the bonds and ordered suit under the anti-trust laws, hitherto rarely used, against the Northern Securities Company, a holding company merging three great railroads—Burlington, Northern Pacific and Great Northern, the latter two parallel outlets to the West. This shocked J. P. Morgan who had engineered this deal with Edward H. Harriman and James J. Hill. He had

thought the youthful President "would do the gentlemanly thing." The holding company was dissolved eventually in 1904 by the Supreme Court. Roosevelt's second offense was the manner in which he handled the great 1902 coal strike in which 140,000 miners struck for the nine-hour day and a 20 percent increase in wages—they were getting \$10.09 a week. After the coal operators had balked for months and a shortage of coal threatened nationwide distress, the President called the operators to the White House, talked to them roughly, and threatened to take over the mines. The strike was settled to the sputtering of the coal barons.

Our expansion as a world power was helped by acquisition of the Panama Canal project which had bankrupted a French company. This piece of business was aided and abetted by a fortuitous revolution in Panamá that had a suspicious smell, though the President denied he had any part in promoting it.

CAMPAIGNS AND ADMINISTRATIONS

By Mark Sullivan

Many of the quotations from various sources used in the early part of this survey are printed in the author's six-volume history, *OUR TIMES*, published by Charles Scribner's Sons . . . I have had the use of a comprehensive digest of party platforms in the 12 presidential campaigns covered by the survey and legislation enacted during the presidential terms, compiled by the editors of *Information Please Almanac* . . . In the latter part of the survey, contemporary dispatches by the author to the *New York Herald Tribune* have been helpful.

THE MECHANISM BY WHICH AMERICAN political thought is formulated, debated and carried into effect, is the two-party system. The two parties are not creators of issues; each within itself is responsive to its own voters and both are responsive to the country. While each party has special characteristics, these do not compose a permanent difference. During brief and detached periods, the two parties oppose each other head-on, and it is this that makes elections. But on the long-term basis it is misleading to speak of one party as conservative, one liberal.

During the twelve presidential terms this survey covers, two of the most liberal measures enacted—liberal in the sense of restraint upon business—were the Railroad Rate Bill and the Pure Food Bill. Both were enacted during a Republican Presidency, Theodore Roosevelt's, and were

supported by the practically unanimous votes of both parties in Congress.

Both these measures were outstanding enlargements of power for the federal government. Support of the two measures by both parties negates the assumption that one party stands for a strong central government, the other against.

These examples of lack of permanent contrast between the two parties have been duplicated during many Presidencies; several are mentioned in this survey.

In 1900, William McKinley, whom the Republicans renominated, and William Jennings Bryan, whom the Democrats renominated despite his previous defeat, were the contestants.

In the 1900 campaign there were two principal issues. Both, in differing ways, were ephemeral. The "paramount issue"—the phrase was made familiar by Bryan—

arose out of the war with Spain, which had left in our lap the dependencies of the Philippines, Cuba, Puerto Rico. Bryan said we should make them independent. The Republicans called Bryan's position a "policy of scuttle." The issue was phrased by the Democrats as "imperialism," the milder word of the Republicans was "expansion." A Republican Senator prominent at the time, Albert J. Beveridge, said that expansion was "our imperial destiny," affirmed that "He (God) has made us adept in government that we may administer government among savage and senile peoples. . . . This is the divine mission of America."

The Republicans won the election and kept the dependencies. But expansion as a national policy hardly lived long enough to be a policy at all. The only foreign soil we acquired was a strip of land on the isthmus of Panamá to build the Canal, the Virgin Islands, and during the First World War as a base for defense of the Canal, and some small Pacific Islands taken in World War II and kept as naval bases.

By the 1940's, imperialism as an issue was in eclipse in the world. Britain had abandoned most of its dependencies, and seemed about to cease to be an empire at all. The furore over expansion in the campaign of 1900 illustrates the ephemerality of some issues which at the time are believed to determine permanent policies.

In the 1900 Democratic platform, one plank was less a living issue than an epitaph to a dead one. The platform called for free and unlimited coinage of silver in

the ratio of sixteen to one. That issue—phrased in slogans, "free silver" and "sixteen to one"—had been, four years before, the springboard from which Bryan had leaped into national prominence by what came to be called his "Cross of Gold" speech in the Democratic convention of 1896. A comparatively little-known man, his speech had swept the convention into nominating him for the Presidency, and he had made free silver the issue in his campaign. That 1896 campaign had been the climax of a controversy that had gone on for decades, over gold as the single standard of currency.

Partly because of the 1896 defeat of Bryan on this issue, but more because of an increase in the quantity of gold due to discovery of new mines, the issue lost power to excite. Congress, on March 14, 1900, decreed the gold dollar as the basis of currency, and provided that "United States notes and Treasury notes . . . shall be redeemed in gold coin."

This status of gold remained until, in the early weeks of the Franklin D. Roosevelt Administration (April, 1933) notes were made no longer redeemable in gold and gold withdrawn from circulation. Considering the economic and social effects associated with any vital change in the basis of currency, its intrinsic value and its purchasing power, one might have supposed that the retirement of gold in 1933 would lead to revival of the old issue. But no such issue emerged in the campaigns of 1936, '40 or '44.

— 1904 — 1908 —

by Louis M. Hacker

Theodore Roosevelt had this genius: he was alert to subtle changes in the American temper, and as public opinion reflected new interests and demands so did his utterances. The Republicans had won in 1900 and again in 1904—when Roosevelt had no trouble defeating Parker—presumably because Americans still accepted non-intervention by the state in economic matters as basic policy. But dissatisfaction was growing. Socialism—under the leadership of Eugene V. Debs—was spreading rapidly.

The muckrakers—popular journalists skilled in the techniques of exposure—were using a large group of new magazines with immense circulations to reveal corruption and manipulation in the American political and business life. Because of great concentrations and resulting controls in a good part of our heavy industry and public utilities, prices began to climb while wages lagged behind. The upward movement of real wages, in short, had ceased. Trade unionism—largely restricted to the skilled

crafts—had stopped growing and was powerless to obtain equality of bargaining rights for most American workers. Positive action was demanded; and to this pressure Roosevelt began to yield. Indeed, so skillful was his maneuvering that to many Roosevelt was a leader in the reform movement.

Something was done about concentration. In 1904, a Bureau of Corporations was created to investigate the alleged monopoly practices of Big Business. In the same year—under Roosevelt's prodding—the Supreme Court for the first time used the Sherman Act (passed in 1890) to order the dissolution of a holding company, the so-called Northern Securities case. Teeth were put in the Interstate Commerce Act (passed in 1887) by the Hepburn Act of 1906, which gave the I. C. C. the power to regulate rates for the first time. A conservation program sought to save America's dwindling natural resources for the common good. No effort was made, however, to improve and modernize the country's banking system; the panics of 1903 and 1907 were the prices we paid.

These were modest first steps. More

glamorous was the Roosevelt foreign policy. The United States obtained the Panama Canal Zone in 1903 and started to build the Canal in earnest in 1906. We challenged Britain's naval supremacy and began to build a battleship fleet that would give us command of the Pacific. The Monroe Doctrine was qualified during 1904-05 to make the United States solely responsible for the maintenance of peace—and the collection of debts—in the Western Hemisphere. Roosevelt offered his mediation in the war between Russia and Japan; he sent an American representative to the Algeiras Conference of 1906, which patched up the differences between France and Germany over Morocco. In the domestic sphere, in short, Roosevelt had prevented the spreading of discontent; in the foreign sphere, he had added new laurels to America and firmly fixed her place as a world power.

Can you remember away back when in politics the question "But who is going to pay for this?" slowed up a bill's passage?

—H.I.P.

By Thomas L. Stokes

Republicans renominated their "Teddy." Democrats tried a conservative candidate, Alton B. Parker, a judge from the New York Supreme Court. Roosevelt gave the Democrats their worst defeat since 1872, carrying all states outside the South.

Firmly seated now, the rough-riding President moved forward along a broad front of economic and social reform. So offended was the Old Guard Republican leadership in the Senate with his proposal to give the Interstate Commerce Commission power to fix railroad rates that the task of steering the bill through that body was turned over to a Democrat and a personal enemy, "Pitchfork Ben" Tillman of South Carolina. Likewise a railroad employees accident compensation act and one limiting hours of work for trainmen and telegraph operators on lines in interstate commerce were put on the statute books. And, as models for private industry and States, Congress enacted an eight-hour-day law for workers on government public

works projects and a law forbidding child labor in the District of Columbia. Analysis and dissection of the whole American economy were encouraged by the atmosphere of progressivism in the Administration.

The President also proposed a federal income and inheritance tax law to make good a reform blocked once by the Supreme Court when it invalidated an 1897 income tax law. He encouraged a healthy doubt about the Supreme Court and the economic viewpoints it represented, remarking at one time that there were "some members of the judicial body who have lagged behind in their understanding of the great and vital changes in the body politic, whose minds have never been opened to the new applications of the old principles made necessary by the new conditions," which was heresy enough, in a polite way, but not quite so irreverent as his description of one of its members as "an old fuzzy-wuzzy with sweetbread brains."

By Mark Sullivan

The Democratic nomination—of a New York State judge, Alton B. Parker—was a return of the party to control by its conservative wing.

That the Republicans should nominate Theodore Roosevelt was practically certain. After taking over the Presidency following the assassination of McKinley in September 1901, Roosevelt quickly took a line of his own, a conspicuous departure from the conservatism of McKinley.

The principal expression of Roosevelt's line of policy was attack upon monopoly, trusts, and big business. Early in his Presidency, he battled with coal mine owners and New York bankers associated with them, to make them arbitrate differences with the mine workers. Equally dramatic, and also taking place during the first year of his Presidency, was his prosecution of the Northern Securities Company, a holding company into which three great Northwestern railroads had been combined.

With his official actions went unofficial denunciations, expressed in phrases that caught the public ear—"law-defying corporations of immense wealth" and promise of regulation phrased as "the Square Deal." The sum of all gave Roosevelt a strength which assured him control of the party.

In the 1904 election, Roosevelt's victory was unprecedented, in size of his majority and number of states carried. His fight against monopoly and trusts had brought to him much of Bryan's Democratic following. Partly by this accretion to normal Republican strength Roosevelt made gains in what had previously been the Democratic Solid South, carrying Missouri, the state's first departure from the Democrats since the Civil War and Reconstruction.

Roosevelt, elected, gave out, as if in spirit of awed responsibility, a statement which put into formal words, and accepted as a limitation binding upon himself, a tradition of American politics which, though unwritten, had by nation-long tradition almost the force of law, certainly the status of a rule of our political system:

"On the fourth of March next I shall have served three and one-half years, and this three and one-half years constitutes

my first term. The wise custom which limits the Presidency to two terms regards the substance and not the form. Under no circumstances will I be a candidate for or accept another nomination."

That statement was destined to be quoted as authority and argued over many times. It was cited when Theodore Roosevelt himself, after completing the two terms he had limited himself to, and after being out of office one term, tried for another in 1912—defending his attempt on the ground that the rule against a third term applied only to a third term immediately succeeding the first two.

The statement was quoted again when, in the 1920's, Calvin Coolidge was in the same situation that Roosevelt had been in, serving a term to which he had been directly elected following one into which he had entered as Vice President after the death of President Harding. The wish of some Republicans to nominate him for another term in 1928 brought the two-term rule into debate. The rule, and Theodore Roosevelt's statement of it, was again quoted, and debated with extreme heat, in 1940 when, for the first time, the rule was broken by another Roosevelt, F. D., in his successful candidacy for a third term.

Two laws enacted during Roosevelt's second term stand out as a long stride in assertion of the power of the federal government, especially over business.

One was the Hepburn Railroad Rate Act of 1906. This extended greatly the authority of the federal government over railroads. It gave the Interstate Commerce Commission power to fix railroad rates, and added express companies and pipe lines to the Commission's dominion.

The other law that made Theodore Roosevelt's second Administration high tide of a trend in government, was the Pure Food and Drug Act of 1906 (supplemented by the Meat Inspection Act of the same year).

In several ways, this law was a momentous innovation. While technically it was recommended by Roosevelt as an exercise of the power of Congress to regulate interstate commerce, it was an unprecedented

stretching of that power. Actually, the law was an exercise of ordinary police power, by the federal government, in a way and in a field which, many jurists believed, was not contemplated by the Constitution. The individual states had police power to stop the sale, but while some did this effectively, others did not. The essential aim of the Federal Pure Food Act was to do it on a nation-wide basis. This raised another constitutional objection to the bill, as a trespass upon the rights and functions of the states. It was the states' rights objection that accounted for last-ditch opposition to the bill.

The overwhelming size, near to unanimity, of the votes for the Pure Food and the Railroad Rate bills showed that the people resented the power of business as

expressed in some of its practices, and wanted the power checked. If the checking necessitated or meant an increase in the power of government as such, and an increase in federal power as against that of the states, then the people wanted that as a means if not an end. If bringing about the change included exalting the Presidency as against Congress—in the Congressional debates and in popular discussion there was much about presidential "dictation" by Roosevelt—the people, in their mood of the time, wanted that, too.

The Electoral College is unique among all institutions of learning. When its students vote a man most likely to succeed, he always makes good.

—H.B.

— 1908 – 1912 —

By Louis M. Hacker

Roosevelt asked for the election of his friend William Howard Taft as an endorsement of his policies. Taft won easily over Bryan, running for the third time, and Roosevelt left the country to hunt in Africa and tour Europe. Taft, unhappily, did not possess Roosevelt's gifts—or his adaptability. Trust prosecutions were pressed vigorously and in 1911 the Supreme Court ordered the dissolution of the Standard Oil and American Tobacco Companies. The Interstate Commerce Act was further strengthened by the passage of the Mann-Elkins Act of 1910. A National Monetary Commission was set up to recommend a complete overhauling of the country's banking system. Conservation measures were pushed. All these were gains. But Taft could not stand up to the high protectionists in his own party.

The result was the Payne-Aldrich Tariff of 1909—and the country's confidence in Taft disappeared.

In reality, Taft was reaping the whirlwind which Big Business had been sowing during the previous decade. Great integrations, monopoly practices, declining *real* wages, labor hostility, banking domination—the resistance to those reforms which were long overdue—not only split the Re-

publican party wide open but indicated that fundamental changes in governmental policy were necessary. Insurgency in the Republican party—led by Norris of Nebraska in the House and LaFollette of Wisconsin in the Senate—raised its head. The Democratic party took a new lease on life. In consequence, the Democrats captured the House in 1910 and won a number of important state elections. Not the least of these was the election of Woodrow Wilson as Governor of New Jersey.

The years 1910–12 were simply preparation for the great debate of 1912. The Democrats established the Pujo Committee to investigate concentration and control in money and credit. They attacked the protectionism of the new tariff law. They called for a complete re-examination of the country's railroad and trust policies. So did the Republican insurgents. Forming the National Progressive Republican League in 1911, these issued a manifesto which declared: "Under existing conditions legislation in the public interest has been baffled and defeated." At the same time the Socialists—with a powerful press and strong support in the trade unions—were extending their influences widely. Even more disconcerting were the successful

organizing activities of the Industrial Workers of the World (formed in 1905) which, reaching the migratory workers and unskilled, was spreading the doctrines of class warfare and revolutionary violence.

To these influences Roosevelt could not for long remain impervious. In August, 1910—realizing that state intervention on a thorough-going scale was now necessary if the American system was to be preserved—he delivered a speech at Osawatimie, Kansas, in which he voiced his creed of the New Nationalism; said he: "I stand for the Square Deal. But when I say I am for the Square Deal I mean not merely that I stand for fair play under the present rules of the game but that I stand for having those rules changed so as to work for a more substantial equality of opportunity and of reward for equally good service."

The New Nationalism included income and inheritance taxes, labor codes, the abolition of child labor, direct primaries. Most important was Roosevelt's realistic acceptance of Big Business but with a demand for regulation of the country's corporate life in the interests of the public welfare.

In February, 1912—while sympathetic to LaFollette and his program but because he believed the Wisconsin Senator could not obtain the Republican nomination—Roosevelt tossed his hat into the ring. He would run if nominated.

It is a well-established fact that American citizens are cool to the third party idea. Many voters are so bigoted on this subject that they will not even join a second party if they can help it. —H.B.

By Thomas L. Stokes

Democrats, having lost with a conservative candidate, Parker, turned for the third time to Bryan. Roosevelt, exercising his party leadership, handpicked William Howard Taft of Ohio who had never served in an elective office but had proved administrative ability as Secretary of War and Governor General of the Philippines.

Each party tried to outdo the other in pledges of reform, creating among them a pattern of proposed changes that had an influence far into the future. One reform proposed by Democrats, the federal licensing of great corporate entities that operated in interstate commerce, still is an issue today.

A change had occurred in the relations between the Republican party and labor that was significant for the future. Samuel Gompers, the orthodox President of the A. F. of L., had been alienated by the Old Guard leadership in Congress, in other ways, by the adamant refusal of Speaker of the House Joseph G. Cannon, known as "Czar" Cannon, to recognize anyone even to speak on behalf of bills for an eight-hour day. Hitherto, Republicans had nurtured labor. But the attitude of the conservative party leadership shifted and Gompers found out after the election that he was unwelcome at the White House.

Taft stumbled at the outset of his Administration into a common pitfall for Presidents, the tariff, from which he never recovered, though in many particulars he carried forward the Roosevelt program. A tariff program supposedly designed to help agriculture was exploited by industrialists and their representatives in Congress to boost industrial rates to new heights in the Payne-Aldrich Tariff Act. His signature of the bill, against which ten leading Republicans from the West had voted, identified him thereafter with the Old Guard, conservative wing of the party. Out of this party ferment there began to develop a new progressive movement that, for the time, centered about Senator Robert M. LaFollette of Wisconsin. Taft's stewardship got a decisive vote of "no confidence" in the 1910 congressional elections when Democrats captured the House. The revolution was on in earnest. Taft tried to recoup.

He opened an anti-trust campaign on several fronts that far outdid the T.R. "trust-busting," winning, among other victories, dissolution of the American Tobacco and Standard Oil combines, which were cut up into smaller units. Taft gave his support also to two other measures long termed "socialistic"—that were enacted in

his Administration—postal savings banks and the parcel post.

The income tax amendment to the Constitution, a reform endorsed both by him and by Roosevelt before him, was approved by Congress and ratified by the states a few days before Taft left the White House. The Constitutional Amendment for direct election of Senators, which Democrats had first advocated some years before, was ratified in May, 1913, a few

weeks after the close of his regime. But Taft was discredited in the eyes of a large part of his party, and by the man who still regarded himself as leader, Teddy Roosevelt, who had returned from his widely publicized expedition to Africa and a triumphal tour of Europe in the midst of the anti-Taft revolt to disavow his one-time protégé and listen to the siren voices of his devoted followers who wanted him to run for President again.

By Mark Sullivan

The strength of Theodore Roosevelt as party head made it predestined that the Republican nominee of 1908 would be whomever Roosevelt approved. Conservatives had no say. He chose William Howard Taft, who had been his Secretary of War.

Bryan as Democratic leader, nominated himself. Within the party Bryan had power to control, and some right to. Four years before, he had stepped aside, letting the conservatives of the party nominate one of their own, Parker. The disastrous defeat of Parker gave control back to Bryan. But in the eyes of much of the public, he had suffered decline. Roosevelt, by bringing about the Railroad Rate Act in 1906, had attracted to himself many Democrats who had previously supported Bryan on the railroad issue. Bryan, sensing the loss, and striving for a new railroad issue, arrived at government ownership. But he was obliged to bear in mind also the fundamental Democratic issue, states' rights. Seeking to reconcile the two issues, he straddled both in a way that struck the country as queer: "... the trunk lines (to be) operated by the federal government, and the local lines by the several state governments."

Democratic and Republican platforms in 1908 were largely a condemnation of monopoly and trusts and restraint of big business. On this the Republican "point-with-prides" included approval of themselves for adoption of the Railroad Rate Act during the Roosevelt Administration. Going back to 1889, they took credit for the Sherman Anti-Trust Act. In the same spirit they promised further action to control railroads, and further control over potentially monopolistic interstate corporations.

Competing with the Republicans, the Democrats proposed barring directors from serving on competing corporations, and proposed federal licensing of corporations controlling 25 percent or more of the national output of the products they made.

The 1908 platforms also competed on labor reform measures. The Republican promises included an 8-hour day on public works, a child labor law for the District of Columbia, investigation of mine disasters, strengthening of laws against importing contract labor, limiting use of injunctions against labor unions. The Democratic platform promised limitation of use of injunctions against unions, immunity of unions from the laws against restraint of trade, the 8-hour day on government work, liability law, establishment of a Department of Labor.

The similarity of the 1908 platforms showed that the mood of the country, was for greater restraint of business, greater freedom and helpfulness for labor, and consideration for farmers. In sum, enlargement for the individual and the common man, restraint for organized business and wealth.

In the Republican platform of 1908 was one plank that had been perennial in their platforms for decades—indorsement of protective tariffs. When they won the election, they passed the Payne-Aldrich Act within five months. During the debates, some dozen Republican Senators—who became well known and potent as "the insurgents"—opposed the bill, and appealed to President Taft. He did nothing to modify the bill. Perhaps his doing nothing was an expression of temperament that put him in contrast with Roosevelt and caused the

public to feel diminishing esteem for the easygoing Taft.

Taft signed the bill, and publicly defended it. Thereby he brought upon himself disaster. For the Payne-Aldrich tariff law, through violent attack upon it by both the Democrats and the insurgent Republicans, as well as Western farm spokesmen and much of the country's press, became an issue in the 1910 congressional election.

The Republicans lost it, electing only 162 members of the House to the Democrats' 224. Usually when a party in power loses the congressional election in the middle of a presidential term, it loses the Presidency in the ensuing presidential election. This conforms to the alternating tides of popular emotion and political thought—the swings from conservatism to liberalism and back, which characterize the politics of a country having the two-party system.

— 1912 - 1916 —

By Louis M. Hacker

The domestic problems facing Woodrow Wilson were not easy to resolve. There was no doubt that labor's share of the national income was inadequate: in fact, labor was on the defensive, for trade unionism had stopped growing significantly after 1905. Long hours, poor wages, the beginnings of the speedup, child labor and chronic unemployment made the workers an underprivileged group in the American community. And while corporate industry was powerful, it was not capable of keeping its own house in order. It was not as efficient as it should have been; despite its links with finance, it could do nothing about the business cycle. Chiefly at fault was the primitive banking system. Business conditions continued spotty until mid-summer 1914; there was a recession even before the European war broke out; and hard times really hit the United States in the following months. The N. Y. Stock Exchange closed down and unemployment was large.

In his first inaugural, Woodrow Wilson pledged his Administration to the support of three major domestic policies, namely tariff revision, banking and currency reform, and trust legislation. In less than a year and a half these major objectives were achieved. His Administration had a greater significance, for it was a turning point in American public affairs. It marked nothing less than the beginning of state interventionism on a large scale. Not quite the whole field of social relations and individual needs was covered; it remained for the New Deal to fill in the gaps. But the social reformers of the first decade of the

twentieth century were at last being heard.

The Underwood Tariff Act of 1913 cut rates sharply, expanded the free list, sought to apply the principle of protection only to infant industries and was the first tariff law to incorporate an income tax—this time without fear of judicial interference, for the Sixteenth Amendment to the Constitution had been ratified earlier. The Federal Reserve Act was passed and signed later in the year. It tried to overcome the inadequacies of the national banking system by giving the country an elastic currency and a real reserve mechanism; more, it made the first effort to control booms and depressions in the business cycle by providing for the re-discounting of commercial paper, the raising and lowering of discount rates, and open-market operations by the reserve banks. Anti-trust legislation took two forms—the passage of the Federal Trade Commission Act (September, 1914) and the Clayton Anti-Trust Act (October, 1914). The first created a new agency with greater powers than the Bureau of Corporations: it was both to investigate and regulate, in this latter connection issuing "cease and desist" orders against companies engaging in unfair business practices. The Clayton Act specified the illegal methods; it outlawed certain corporate practices, notably those that had to do with interlocking directorates; and it freed labor from action under the Sherman Law. Section 20 of the law also sought to protect organized labor from the indiscriminate use of injunctions by the federal courts. Enough to say that the last two

hopes were not realized. It was not until the passage of the Norris-LaGuardia Anti-Injunction Law of 1932 that labor was finally given adequate defenses against legal abuses; and not until the writing of Section 7 (a) of the National Industrial Recovery Act of 1933 and the Wagner Labor Relations Act of 1935 that the independence of trade unionism in the United States was recognized.

Other legislation included: the Federal Farm Loan Act of 1916 which at last created a machinery for the financing of agricultural mortgage credit; the LaFollette Seamen's Act of 1915, which was a charter of liberties for America's seamen; the Keating-Owen Child Labor Act of 1916, which tried to end child labor (the Supreme Court, however, soon declared the law unconstitutional); and the Adamson Law of 1916, which established the 8-hour day on interstate railways. The New Freedom might have continued along the road of social reform; after all, the questions of social security and a more equitable distribution of wealth had not even been touched. But before long Europe was plunged into war, and the maintenance of American neutrality at once began to in-

volve the President and the State Department.

The outbreak of war in 1914 precipitated a short-lived recession in the United States; before long, however—as Allied purchases multiplied—a wartime boom had commenced. In 1915, thanks to permission accorded to the Allies to raise loans in the American money market, American production increasingly became tied to the Allied war effort. It is a mistake to assume that this was the only or indeed significant stake that we fought for. The flouting of our neutral rights by Germany and the growing awareness on the part of Americans that the Germans were aiming at world domination made the United States more and more pro-Ally. Wilson pursued a scrupulously correct neutral policy. On this basis he sought re-election and after a closely contested canvass he triumphed over Hughes in 1916. The next Administration was preoccupied almost entirely with questions of war and peace. There was no preparation for the postwar; so that not only the rejection of the peace but the bad recession of 1920-21 made the end of the New Freedom an unhappy one for Woodrow Wilson.

By Thomas L. Stokes

Teddy Roosevelt was in a strategic position to serve the purposes of others than his enthusiastic admirers. Big interests saw in him a foil to divert the movement for Bob LaFollette, a much more dangerous man in their eyes; and so a blue ribbon group of financiers, headed by George W. Perkins of U. S. Steel and International Harvester, who had large resources to tap for campaign funds, cannily backed the former President. But the Republican convention was safely under the thumb of the party organization with its patronage-controlled delegates, and renominated Taft. The Teddy Roosevelt delegates bolted, held a convention of their own, and in a religious frenzy seldom surpassed in our political history acclaimed T.R. as the candidate of the Bull Moose Progressive Party—from Teddy's boast "I feel as strong as a bull moose." In a long-drawn-out convention at Baltimore, Democrats nominated

Woodrow Wilson, Governor of New Jersey, former college professor and President of Princeton University, on the 46th ballot. The still powerful William Jennings Bryan threw his influence behind Wilson to overcome the candidate previously leading, Champ Clark (Mo.), Speaker of the House.

It was one of the most brilliant campaigns of our history, because of the intellectual caliber of the three candidates, from which Wilson emerged as victor with 42 percent of the total popular vote. The party split had doomed the Republicans. Roosevelt got 27 percent of the popular vote and carried six states. Taft got 23 percent, with only two states in his column, Vermont and Utah.

A great progressive wave was sweeping the country and Wilson rode it. His Administration blossomed luxuriantly—with reduction of the tariff to reduce the cost of living; an income tax law to spread more

equally the cost of a government that was beginning to spend more for the benefit of the people, and which was perhaps the most far-reaching reform of the whole era from 1900 until today, if the criterion is the ability to reshape our whole economy.

The Federal Reserve Act helped break up concentration of financial power in New York and distribute it more widely through intervention by government. The Clayton Act strengthened the anti-trust statutes and reinforced the government's authority in dealing with monopoly. The Federal Trade Commission Act set up a federal agency for investigation of unfair trade practices, including monopoly. The Federal Farm Loan Act created a dozen federal land banks to provide easier credit for farmers. The Adamson law fixed an eight-hour day on the railroads.

By Mark Sullivan

Following the Republican defeat in the congressional elections of 1910, friends of Theodore Roosevelt, and Republicans whose interest was to have their party retain the Presidency two years later, urged upon Roosevelt that the party might be defeated if Taft was the candidate.

Five months before the Republican convention of 1912, seven Republican Governors signed a round-robin soliciting Roosevelt to run against Taft for the presidential nomination. With this call not yet made public, Roosevelt on Washington's Birthday, 1912, made a speech at Columbus, Ohio. In it he laid down a personal platform, differing from actions and attitudes of Taft; Roosevelt called it a "charter of democracy." On his way home from Columbus, he answered a question by a reporter, gave the country another of his trenchant phrases: "My hat is in the ring."

For three months two men, a President and an ex-President, once intimate friends as well as intimate associates in high office and in public life, slam-banged each other in the eyes of an amazed country. Roosevelt, to captain his forces in person, went to the convention in Chicago, an unprecedented aggressiveness on the part of a candidate for a presidential nomination.

But the Republicans nominated Taft.

With these achievements the era of reform had about exhausted itself. The attention of the people now was distracted by the war that had broken out in Europe in August, 1914.

The President continually nourished the hope that he could stop the war and essayed the role of mediator in vain. Finally, toward the end of his term, after giving little encouragement hitherto to preparedness moves, he acquiesced when Congress took the initiative and increased the standing army and national guard, authorized the building in three years of ten battleships and a half dozen light cruisers, established a Council of National Defense, and created the United States Shipping Board to supervise the construction by the government of a fleet of merchant ships.

Roosevelt with his aides and followers called a convention for two months later, to organize a third party. The Progressive National Convention in 1912 was the most formidable attempt at a third party since before the Civil War, with the most popular leader and presidential candidate, and with the most thorough organization. Never was a third party founded under more favorable conditions.

It was a sign of the endurance of the two-party system in America that the Progressive party neither succeeded in its initial attempt at the presidency, nor lived afterward. By the time of the 1916 presidential election, the Progressive party had ceased to exist. Its quick fading was a lesson remembered by ambitious or idealistic leaders who contemplated starting new parties. The only future attempt having much formidableness was that of LaFollette in 1924, and he carried only his own state, Wisconsin.

In the 1912 election the Progressives carried six states, the Republicans only two. Democratic success was assured by the Republican split. The beneficiary of it was Woodrow Wilson, who had been nominated mainly by the liberal wing of the party, including decisive help from Bryan.

The platforms of the three parties in

1912 were, individually and most strikingly as a group, a landmark in the evolution of the country's political thought. They were, like the platforms of the two old parties in 1908, a competition in affirmations of the restraint upon big business, increased freedom and power for labor. With these went increased consideration for the farmer. With all went increased direct power for the voter in political mechanisms and in decisions upon public questions, by direct primaries.

Between the platforms of the Progressives and the Democrats, the chief contenders in the 1912 election, there was a faint distinction in the attitudes which both took against trusts and big business. The distinction was suggested by two slogans that came to describe the platforms and aims of the respective parties—The Progressives' "The New Nationalism"; that of the Democrats and Wilson "The New Freedom." Roosevelt and the Progressives, while they set their faces sternly against trusts and big business, recognized economic usefulness to the country that might go with bigness in some cases. They would cure the evils of big units of business by putting them under extremely rigorous regulation and control. Wilson was against them utterly; he would destroy them, or enforce upon them competition and restraints by which they would cease to be very big. Wilson's attitude was much like that of Bryan's, "Private monopoly is intolerable and indefensible."

Wilson, elected, set quickly and vigorously upon carrying out the promises of the Democratic platform and himself. Two events of the most deep-reaching importance, one taking place after Wilson's election, but before his inauguration, the other within the first three months of his Presidency, were not traceable to his leadership. They were the fruition of processes that had gone before. The Income Tax Amendment to the Constitution had been initiated by a Republican Congress in 1909. The

Amendment for direct election of Senators had been initiated by a Democratic Congress in 1912.

The two amendments, each in its way, were outstanding landmarks in the evolution of American political thought. The income tax amendment affirmed the principle that, above a minimum, which was low, citizens may be taxed, not merely in proportion to their means but out of proportion to them. The amendment, if made use of as a check upon amassments of property, could be automatic and invincible.

The amendment for the direct election of Senators was in the same spirit of more direct participation in political processes by the voter, as in the direct primaries. Both the direct election amendment and the income tax were expressions of the prevailing mood of the people to which both parties paid deference.

Wilson pressed through Congress the Clayton Anti-Trust Act, prohibiting interlocking directorates of competing companies and other practices tending toward monopoly. Labor unions, however, were exempted from the anti-trust laws. The Wilson legislative program also included the Adamson Act, limiting working hours on railroads. The Federal Trade Commission was established to supplement execution of the anti-trust laws and forbid unfair competition. The Glass-Owen bill set up the Federal Reserve System to check what Wilson and the Democrats denounced as the "money trust." The laws put through Congress during the early part of the Wilson Administration were an extraordinarily comprehensive program of reform.

Presently, however, the momentum of Wilson's pressure for his reform measures was slowed down by attention he had to give to trouble in Mexico. Then came June, 1914. Europe's war, even before we were involved in it, or many of us felt it was our concern, had its way with important social reform.

The 1948 election falls on November 2, the earliest day possible. Our two parties must realize that they have less time than usual to save the country from each other.—H.B.

The law limits individual campaign contributions to \$5,000, but a donor's sons often write their own nice checks. And so do his sisters and his cousins and his aunts.—H.B.

— 1916 - 1920 —

By Louis M. Hacker

The re-election of Woodrow Wilson and the resumption of German assaults on American neutrality almost coincided. The German decision to use the submarine against our shipping, the exposure of a German plot to involve Mexico against us, and the Russian Revolution—freeing that land from autocratic domination—made our entry on the side of the Allies inevitable. On April 6, 1917 the United States was in the war. Mobilization for the war effort at once took place. A national draft inducted almost 3,000,000 men into the national service—and, in the 19 months of our participation more than 2,000,000 of these were sent overseas. The great force of American manpower was felt in the Spring of 1918 and our fresh troops under an American command undoubtedly turned the tide of battle. America's vast resources also were thrown into the war. In the period June, 1917 to April, 1919 more than 21 billions of dollars were raised by 5 popular loan drives and an additional 10 billions by taxation: we financed our own war needs and—to the tune of 10 billions of loans—those of our Allies. A whole group of wartime agencies made its appearance to coordinate industrial production, manufacture ships and aircraft, expand agricultural plantings, turn out more fuel, enlist labor's cooperation. A Committee on Public Information sought to inform our people and those of the world of our war aims. We were fighting to make the world safe for democracy and to establish a world order that would guarantee international peace. The Attorney General and the Postmaster General concerned themselves with hunting down and punishing dissent—with unnecessary harshness, however, thus curbing the freedom of the press and jailing men who, while they may have been

mistaken, were for the most part devoted to American principles.

A miracle of production occurred. But there was failure to check the upward climb of prices or to assure labor's fair share of the mounting national income. From 1914 through 1918, wholesale prices increased 100 percent; from the end of the war into 1920, they went up another 20 percent. From 1914 to the end of the war *real* wages dropped almost 20 percent. It was not until 1920 that labor's wages had caught up with increases in the cost of living. As a consequence of these pressures labor organized and became more militant. Membership in trade unions, which had stood at 2,000,000 in 1914, increased to more than 5,000,000 by 1920. There were many wartime strikes. On the other hand, radicalism's influence declined; that of the socialists' because its leadership was anti-war and that of the I. W. W.'s because it was prosecuted and jailed.

As soon as the war closed, business' adjustment to the peace was uncertain. But by the middle of 1919 there was a real boom due to heavy consumer purchasing, the resumption of construction, and foreign demand. Prices shot up, there was a vast credit expansion, inventories piled up. A crisis, however, took place in May, 1920 and a recession continued for almost a year. During this period the general level of wholesale prices dropped more than 40 percent; unemployment became widespread; and agriculture entered into a decline from which it did not recover until the New Deal's program revived it. With Wilson ill in the White House and the government helpless in the face of these events, the presidential contest of 1920 took place. It resulted in an overwhelming Republican victory.

The campaign manager's life is full of hard work and headaches. He seeks no reward for his devoted services except the gratitude of the Republic and a job as Postmaster General.

—H.S.

Television is apt to be a pretty terrible thing in election campaigns. For one thing it is going to make it certain that you see your mistake before and after voting.

—H.I.P.

By Thomas L. Stokes

Six words in a nominating speech at the 1916 Democratic convention that set the delegates off in wild frenzy and so were appropriated for the platform—"He kept us out of war"—became the Democratic campaign slogan and perhaps provided the hair-line margin of victory by which Woodrow Wilson was returned to the White House.

Charles Evans Hughes, who was drafted from the United States Supreme Court by the Republicans, aside from lacking warmth, was also an inept campaigner, and became identified with the Old Guard wing of the party. It was one of the closest elections in our history. The East had deserted the Democrats. The South and the West and the border states rolled up the victory which would not have been possible, however, without Ohio, a lone basis for the Democrats.

"He kept us out of war" was becoming, however, only a pious hope. Germany announced resumption of unrestricted submarine warfare in a gamble for victory by starving out England. Soon thereafter more American lives were lost by sinking of merchant vessels. The verdict for war was given by Congress on April 6, 1917, after the President's dramatic appearance at night at a joint session to ask for it.

The country was ill-prepared. But it knuckled down for its crusade to "make the world safe for democracy" in a regimented state that, for the time being, huffed off all pretense of democracy.

To make the peace and realize his vision of a League of Nations to end wars and social and economic injustices all over the world, Wilson went to Europe and sat down in Paris with shrewd diplomats who were not so idealistic, now that the Prussian menace was chained. Secret commitments, entered into even in the throes of war while Wilson was talking idealism, gradually were revealed and some were written

into the Treaty of Versailles which also, however, contained Wilson's dream of a League of Nations. He had unwisely taken no Republicans with him to Paris and so, when he returned, he found that the peace had become a partisan issue at home. The people, weary of war, reacted to elect a Republican Congress in spite of Wilson's plea for a Democratic Congress to uphold him, and he saw his dream begin to fade. An appeal to the people in a cross-country tour ended tragically for him when he collapsed after a speech at Pueblo, Colorado. He came back to Washington to become henceforth an invalid in the White House, with resultant confusion of counsel and direction of affairs that weakened his Administration with Congress and the people. Now an embittered and obstinate old man, broken in health, he refused any compromise on his beloved League, and so lost it when the Senate rejected it and put nothing in its place.

The waning days of his Administration saw passage by Congress of four measures that he did not like. He vetoed the Volstead Act to impose national prohibition. Congress passed it over his veto. But he could do nothing about the Constitutional Amendment, the Eighteenth, writing national prohibition into our basic law. Nor was he an advocate of extending the vote to women which Congress proposed in submitting the 19th Amendment a few months later. One of his last acts before he left the White House was to veto the Fordney Emergency Tariff Act which he condemned for its economic isolationism in a message that outlined with uncanny accuracy just what would happen if that policy were pursued. Events of the ensuing decade bore him out. He did not forecast the ultimate in the great depression that ended the delirious decade of the Twenties, but all the implications of such a catastrophe were in his solemn final warning.

There is always a political campaign on to rescue the Americans from the income tax. But if they are ever rescued there will probably be a tax on the rescue. —H.I.P.

Some of our statesmen seem to feel that it is not dignified to woo the Presidency. They think it looks better to stay quietly at home and wait for a Leap Year proposal.—H.B.

By Mark Sullivan

The platforms of both parties in 1916 continued to emphasize regulation of business and measures favorable to labor. But the war was in every mind. On this the two platforms were not greatly different, and both were guarded. Both favored an adequate army, a strong navy. Both refrained from any definite affirmation about what was in all minds—should we, or would we, or ought we, become involved in the war?

The Democrats, while carefully indefinite about the future, nevertheless stressed strongly the fact that Wilson so far had, in words that later became a party slogan, "Kept Us Out Of War." While party leaders generally did not put in words the implication that he would continue to keep us out of war, that was intended, and relied upon as an appeal to voters.

The record was that Wilson, in the early months of the war, had gone to extremes toward keeping out of it. Two weeks after the outbreak in Europe he had issued a proclamation: "We must be impartial in thought as well as in action, the United States must be neutral in fact as well as in name." He had spoken of the war, in his address to Congress in December 1914, as "a war with which we have nothing to do." But presently Wilson, partly as a taking account of changing public thought and emotion, but more as an evolution of his own mind, began to advocate preparedness. In his December, 1915 message to Congress he recommended strengthening the armed forces. By steps, he advanced his position, reaching a point at which he advocated "a great navy second to none in the world."

During the war, the major enactments by Congress had to do with the conflict. True, the war, like all wars, had future social and economic consequences deep-reaching in effect. These included the inflation of currency and credit to provide funds for carrying on the war. The inflation became, later, a major contribution to the economic troubles of the 1920's, climaxed in the collapse of 1929 and ensuing depression. But during the war no important legislation aimed directly at economic or social change was passed.

Soon after the war, though under the administration of Wilson, yet having no essential relation to it, two amendments to the Constitution were adopted. The 19th, proclaimed August 29, 1920, gave women the right to vote, thus potentially doubling the number of voters. The 18th Amendment, declared in effect January 16, 1920, forbidding manufacture, sale and transportation of intoxicating liquors, led to a political commotion (accompanied by some changes in social conduct and attitudes) that raged throughout the 1920's. The controversy over National Prohibition ended in an unprecedented anachronism, the adoption in 1933 of one amendment, the 21st, in order to repeal another amendment, the 18th.

Wilson's record was enough to re-elect him, at least certainly not to be an impediment to his re-election. (His victory was so narrow that the Republican candidate, Charles E. Hughes, went to bed the night of the election thinking, as did most of the press and the country, that Wilson had been defeated.)

— 1920 - 1924 —

By Louis M. Hacker

The Harding and Coolidge Administrations seemed to mark the return to simpler and happier times. We lived in splendid isolation (although we continued to intervene in Latin American affairs); government withdrew its intercession from economic and social concerns (although the ugly scandals of the Harding Administration demonstrated that complacency had

its price); we proved we could have our cake and eat it too. The tariffs of 1921 and 1922 shut Europe's goods from our shores—but what matter? Our loans financed exports. Agriculture and coal were in depression—but there was no need to worry over consumer demand, for the magical invention of installment credit permitted the purchase of automobiles and house-

hold appliances and the construction of dwellings presumably without end. America took to the road, saw the radio become a household necessity, beheld the movies wired for sound. America tolerated the Ku Klux Klan until its actions had become outrageous and states began to move against it in 1924. America shut its door to the European immigrants with the writing of the first emergency quota law in 1921 and a permanent one in 1924. America had watched Negroes stream northward as part of the war effort and was content to see them treated as second-class citizens. Labor, too, was lulled into calm acceptance of a conservative order of things. Trade union membership declined; no efforts were made to organize the mass production industries; no voices were raised against the new giant integrations in industry and finance which were appearing once more.

The fact is, labor was willing to settle for half a loaf.

It has been pointed out that during 1900-14 *real* wages in the United States stood still; and during 1914-18 they had topped. From 1918 to 1930, *real* wages in the United States increased 100 percent!

It is to be observed, however, that most of these gains had been achieved during 1918-22. From 1922 to 1930, while prosperity spread its golden calm over the land, the rise in *real* wages was only 20 percent.

Here we get to the heart of the analysis—and, indeed, the fatal flaw in the prosperity of the 1920's. Thanks to mechanical invention, industrial productivity was increasing—but it was increasing faster than wages. Prices were steady—but they should have gone down because profits were high. National income increased impressively, but there were grave distortions in its distribution. For in 1929, families receiving \$5,000 a year or better constituted but 8.2 percent of the country's family population, while they got 42 percent of the country's income. In effect, a concealed "profit inflation" was occurring and the prosperity of the twenties was, therefore, based on credit: credit to finance foreign customers of our great surpluses and credit to finance consumer purchases of automobiles and household goods.

Boom had returned by 1922 and it was in such a climate of self-congratulation that America elected Coolidge in 1924.

By Thomas L. Stokes

Compromise was the order in both national conventions in the selection of candidates. A deadlock at the Chicago Republican convention among three leading candidates—General Leonard Wood, Senator Hiram Johnson of California, and Governor Frank O. Lowden of Illinois—was broken on the tenth ballot by the compromise nomination of Senator Warren G. Harding of Ohio. A strict party organization man in the traditional mold, with a record bare of any achievement of consequence, a small-town editor by profession, Harding had been picked by Old Guard leaders in the now historic "smoke-filled" room in the Blackstone Hotel. For the vice presidential nomination, the convention, on one of those occasionally successful stampedes from the floor, had chosen Governor Calvin Coolidge of Massachusetts, who was notable chiefly for a pungent statement he made during the Boston

police strike—"There is no right to strike against the public safety, by anybody, anywhere, any time."

The Democratic convention at San Francisco went for 44 ballots before it compromised on another Ohioan, Governor James M. Cox. For vice presidential candidate, the Democrats took Franklin D. Roosevelt of New York who had been identified with the Wilson Administration as Assistant Secretary of Navy.

If the intention of the G.O.P. Old Guard oligarchy to have its own way thereafter, to stop all nonsense about reform, to take the government's hands off business and to run the government for its own ends was not obvious enough in the way it hand-picked a pliable instrument in the easy-going, amiable Ohio Senator, then it was plain for all to see in the sort of campaign it ordered for him. They confined him to his own front porch in Marion where

he met delegations and spoke in agreeable platitudes contrived in the muddy English familiar to small-town, middle-class journalism. He set the pitch of his campaign with the comforting phrase—"back to normalcy." In vain did Cox and Roosevelt, in whirlwind nationwide tours, beat their fists in frustration at the wall of apathy, the listlessness. The lassitude, the let-us-alone attitude of the people then and in the era that followed was well described by the editor of the Democratic *New York World*, Frank I. Cobb, who said the people were willing to die but not to think for their country.

Cox and Roosevelt came out for the League as Wilson had asked for it, without compromise. Harding, treading gingerly between the Senate isolationists who had nominated him, on the one hand, and some distinguished internationalists in the party, on the other—Charles Evans Hughes, A. Lawrence Lowell, Elihu Root, William Howard Taft—advocated "a free association of nations." But he never explained what that was, or the manner in which he proposed to get it.

Harding was elected by the biggest landslide yet in American political history. He got sixteen million votes to nine million for his fellow Ohioan. Cox carried only the Solid South, and lost Tennessee. A fairly sizeable dissent showed itself in nearly a million votes for a candidate who was in jail. Eugene V. Debs, Socialist, was serving a sentence in the federal penitentiary in Atlanta, Ga., for violating the Espionage Act by publically proclaiming his opposition to the war.

Quickly the Old Guard Republican managers of Congress re-enacted the Fordney Emergency Tariff bill which Wilson had killed with his veto and against which he had warned; reduced taxes on the rich, though not to the extent sought by the great idol of the privileged, Secretary of Treasury Andrew W. Mellon, the Pittsburgh financier and industrialist; and then closed the door effectively against international economic cooperation by putting through a comprehensive range of tariff increases in the 1922 Fordney-McCumber Act. This did contain an innovation that was commendable, the so-called "flexible tariff"

scheme that permitted the President, on recommendation of the U. S. Tariff Commission, to raise or lower rates within a 50 percent range of existing rates. This was important, not of itself, for it was little used, but as the first step in the later broader delegation of tariff-making authority to the Executive, thus removing this function from the log-rolling atmosphere that always surrounded consideration of tariff bills by Congress.

The big-hearted President, who had a warm love for people as individuals, which he had demonstrated by pardoning Eugene Debs on his first Christmas in office, won a major reform in the field of social welfare by persuasion when he induced the steel industry, at a conference of its leaders at the White House, to establish an eight-hour day. But he permitted his Attorney General, Harry M. Daugherty, the political strategist who had brought about his nomination, to seek the most sweeping labor injunction in American history. In the domain of civil liberties, labor and progressivism suffered generally in a continuation by William J. Burns, chief of the Bureau of Investigation in Daugherty's Justice Department regime, of the "red raid" type of persecution initiated at the end of the Wilson Administration by Attorney General A. Mitchell Palmer.

The "hundred percent Americanism" of the times was cruelly distorted in revival of the Ku Klux Klan with its racial and religious persecution. The moral letdown among people, which found an outlet also in defiance of the new prohibition law and a disregard of law in general, reached into top political quarters in Washington—though the public did not discover until after the President had died how he had been betrayed by spoilsman friends in public office who took the election mandate for "back to normalcy" very personally and too literally in the most sordid saturnalia of graft and corruption since the Grant Administration.

Agricultural depression, slowly spreading in the West due to the loss of foreign markets for wheat that piled up a surplus and knocked down the price, reflected itself in the 1922 Congressional elections by the unseating of some G.O.P. regulars

in that area, and the election of rampant agrarian revolutionaries who demanded that the government do something about the farmer's plight.

The agitation in Congress resulted in a number of measures to alleviate farm distress.

In the field of foreign affairs, Harding had quietly dropped his "free association of nations," yielding to the powerful isolationist clique. Harding thus evaded a positive leadership that might have changed the course of history.

He had a spectacular alternative in the Washington Arms Conference. Secretary of State Charles Evans Hughes proposed general reduction of navies on a five-five-three ratio for Great Britain, the United States and Japan, which subsequently was embodied in a ten-year treaty. The assembled nations also prepared a nine-power treaty guaranteeing the integrity of China and the Open Door there.

Stricken in San Francisco on the way back from a trip to Alaska, Harding died suddenly, Aug. 2, 1923. Calvin Coolidge succeeded—a man who had come up in politics, routine step by routine step, by minding his own business and asking no impertinent questions about established institutions, government or private, and with none of what he would have called "fancy notions" about changing things. First unveiled as the strong, silent type, which he distinctly was not, he gradually took on the beguiling ways of a character actor—plain "Cal" or "Silent Cal"—an image that served perfectly the purposes of the business and financial lords of America who guessed rightly that he would not try to upset anything.

Hardly had he settled himself in office when the unsavory doings of the unscrupulous friends of his predecessor broke noisily into the open. The bizarre and almost unbelievable drama of corruption in high places involved Albert B. Fall, Secretary of Interior, who had bartered away valuable naval oil reserves to Edwin L. Doheny and Harry F. Sinclair, oil magnates; Attorney General Daugherty and aides and cronies, who were accused of corrupting justice for private gains; Charles R. Forbes, Veterans

Bureau Administrator, charged with graft of various kinds, and a number of minor officials. Fall was the first Cabinet officer in our history to go to jail. Forbes also went to jail. So did some minor officials. Daugherty's first trial resulted in a hung jury, and his second trial in acquittal. Two officials involved took the suicide way out.

Coolidge escaped involvement politically. Harding's death was a kind stroke of fate, both for himself and his party.

Coolidge fitted most appropriately into the "normalcy" pattern. He sponsored another "Mellon Tax Plan" which proposed very handsome reductions for the wealthy. Again more than the coalition of Democrats and insurgent Republicans in Congress would permit, based on the theory that this would free money for investment, expand business and industry, and thus spread benefits generally to the workers below—what became known as the "trickle-down" theory.

Coolidge vetoed an insurance soldier bonus to give veterans a twenty-year endowment policy in amounts based on length of service, but Congress passed it over his veto and it became law. It was a substitute for a cash bonus sought by veterans organizations.

In his first term, Congress finally approved the long-agitated Constitutional amendment to prohibit child labor and submitted it to the states.

In an action that reached far into the future, Congress passed an immigration bill definitely excluding the Japanese and thus abrogating the "Gentleman's Agreement," so-called, under which some Japanese had been permitted to enter the country. The liberals in Japan sought to avoid this definite and hidebound exclusion, fearing it would strengthen the military caste which traded in anti-Americanism, and President Coolidge used his influence to try to defeat it. But he signed it when it came to him. The fears of the liberals in Japan were proven to be well-founded when they were eliminated from office in time and the military caste assumed power and exercised it, in the future, in an aggressive expansion in China and the Orient.

By Mark Sullivan

In the 1920 Democratic convention there was, however, no sign from Wilson of any preference. After James M. Cox, of Ohio, had won, party leaders, wishing to make a gesture of deference to Wilson and the immense place he had in the country and in the world, took a step which, years afterward was looked back upon as historically interesting. They gave the vice presidential nomination to Franklin D. Roosevelt; he was Assistant Secretary of the Navy, in Wilson's cabinet.

The Republican presidential nomination in 1920 was the result of a condition that sometimes arises in national conventions. The leading contenders, General Leonard Wood and Governor Frank Lowden of Illinois, battled through several ballots; neither made gains. The convention turned to one who was little known to the country, Senator Warren G. Harding of Ohio.

The 1920 platforms of both parties were exceptionally long. Many planks in both dealt with ephemeral issues, having to do with the conduct of the war and the transition to peace. In both platforms were endorsements of old issues, restraint of big business, and elevation of labor.

The issue that towered in world importance, was the League of Nations. To the

Republicans it was an embarrassment. Leading Republicans in the Senate had been in the forefront of the fight against it, and Harding himself had taken that line. At the same time many Republicans of equal eminence favored it. In the campaign, Harding "fudged," proposing a "world association." For the Democrats, Cox endorsed the League, with evangelical fervor, saying that the election should be "a great and solemn referendum."

What was in most minds was not an issue but a condition. The people had been tired by the war, made restless or resentful under the restrictions it imposed. They wanted to get back to accustomed ways. To this mood President Harding appealed in a phrase that became widely popular and that expressed, more than any formal issue, what moved most voters, "Back to Normalcy." In the election Cox carried only 11 states to Harding's 37.

Radio has had a profound effect upon American politics, but the widespread use of television may turn out to be less important. The newsreels have already convinced many citizens that some candidates should be heard and not seen. —H.B.

— 1924 — 1928 —

By Louis M. Hacker

Never did a President carry the burdens of his office as lightly as did Calvin Coolidge; never did one have to meet opposition so rarely. Prosperity was associated with the quiet little man in the White House—who did nothing, and because he made no effort to interfere with the economic processes was regarded as wise and just. There was no unemployment; corporate profits were large; the purchasing power of the American people dazzled the world. There were grounds for our complacency. Technical innovation increased the productivity of the American laboring force vastly in manufactures, mining communications, and electrical power and light. A great building boom filled the land with new residential, commercial, and in-

dustrial edifices and plants. Public authorities built new roads, schools, and hospitals. During the Twenties, America's electric power capacity was doubled. The automobile, radio, aviation, rayon, moving picture industries matured.

The whole structure was built on credit—and not wisely. Individuals financed their purchase of durable consumer goods through installment credit. They acquired equities, bonds and real estate almost as easily, for all they had to do was pledge such properties to obtain the funds to purchase them. Nor was it more difficult for businessmen and corporations. Companies were refinanced and, with fresh capital, expanded plant and inventories. New holding companies and mergers ap-

appeared: the New Freedom's legislation was ineffective in preventing this new era of trustification. All this was accompanied by a pyramiding of capital values. Foreign dollar bonds were floated—to finance our exports and to enrich the investment houses, who regarded their obligations to American security purchasers as very light.

This credit inflation had the effect of encouraging overexpansion of business enterprise and a further inflation of credit took place. Other businessmen moved their profits into securities speculation, and here prices soared. Unfortunately, no checks were imposed by government. Taxes were lowered so that the great public debt incurred as a result of World War I was not diminished appreciably; and the failure to tax significantly eliminated one of the

brakes on the inflation. In another sector, the credit inflation was encouraged. There was a brief recession in 1924 and another in 1927; following this latter, the Federal Reserve Board stepped in and forced down the money rate. It was committed to a regime of "cheap money." From then on, speculation and company promotions could not be controlled—and the boom continued.

Despite the fact that Coolidge had shut his ears to the pleas of agriculture for relief, had done nothing to conserve the country's natural resources so rapidly being wasted, had refused to move against the new trusts, his position and that of his party remained unimpaired. Hoover had no trouble defeating Smith in the election of 1928; for Hoover had been one of the architects of Coolidge Prosperity.

By Thomas L. Stokes

Coolidge was renominated on a platform stressing prosperity—for which the party claimed credit—tax reduction and economy. Democrats, meeting in old Madison Square Garden in New York, ran into a bitter deadlock between Governor Alfred E. Smith, of New York, a Catholic and "wet" and William Gibbs McAdoo of California, a Protestant and "dry." The convention ended with a compromise candidate in John W. Davis, who was vulnerable politically because he was counsel for J. P. Morgan and Company. To "balance" the ticket, the leaders stuffed down the throats of the delegates the brother of William Jennings Bryan—Governor Charles W. Bryan as vice presidential candidate.

Progressives could find little comfort or hope in either major party and the growing agricultural distress in the West made that section ripe for revolt. They decided to strike out on their own. The forces of discontent gathered about the Railroad Brotherhoods as the nucleus but also included Socialists, independents, farmers and labor outside of the railroad unions. They met in Cleveland, declared war on both old parties, and nominated Senator Robert M. LaFollette, of Wisconsin. A Democrat, Senator Burton K. Wheeler, of Montana was designated the vice presidential candidate. Monopoly and monopoly

control of government were emphasized in the convention's platform as the overpowering evil of the day. The Supreme Court was singled out as inimical to the people's interest. It was proposed that Congress be given a veto over decisions affecting constitutionality of legislation.

Coolidge's majority of 2,000,000 over the combined vote of both the other candidates was translated into a handsome electoral vote of 382, with 136 for Davis and 13, Wisconsin's contribution, for LaFollette, who, however, got nearly 5 million votes and ran ahead of Davis in eleven states west of the Mississippi.

Coolidge and the dominant industrial-financial interest which backed him paid no heed to the handwriting across the western horizon. Washington and New York watched the rising mercury of the stock market. The West cried for relief.

Its remedy, the McNary-Haugen bill to dump surpluses abroad at whatever prices they would bring and to assess the loss back to the grower by an "equalization fee" was twice passed by Congress and twice vetoed by the President.

Likewise, Coolidge vetoed the bill sponsored by one of the western Republican insurgent leaders, Senator George W. Norris, of Nebraska, for government operation of the giant Muscle Shoals, Alabama,

nitrogen plants of the First World War to produce nitrates for cheap farm fertilizer and electric power. Such a proposal then was socialism rampant; Coolidge's big business backers would have none of that.

During his vacation in the Black Hills of South Dakota, in the summer of 1927, President Coolidge startled the politicians by the one-line statement, "I do not choose to run for President in 1928." Perhaps Mrs. Coolidge, had the answer in the remark attributed to her, "Papa says there's going

to be a depression." He left the wrath to come to his successor, Herbert Hoover, whom he is reputed to have called "The Wonder Boy."

About September of presidential election year, Republicans always hear a delightful rumor that the Solid South is beginning to crack. Like the Santa Claus myth, this story brings innocent pleasure and does nobody any harm.

—H.B.

By Mark Sullivan

The Republicans as a matter of course nominated Coolidge, who had succeeded to the Presidency after Harding's death on getting the votes of 1,069 delegates in the convention. Thirty-four delegates supported Senator LaFollette of Wisconsin. LaFollette, after the overwhelming rejection of him, was nominated as the candidate of a new third party, set up by a "Conference for Progressive Political Action."

For the Democratic nomination, a contest between William G. McAdoo and Governor Alfred E. Smith of New York prolonged the convention for sixteen days, a length unprecedented since the Civil War. McAdoo reflected geographically the Democracy of the South and rural districts; Smith, the North and the big cities. Ideologically, McAdoo was "dry"; Smith was "wet." Associated with the conflict, to some extent tacitly but frequently outspoken, was religion. Smith was a Catholic. Much of the struggle in the convention was over a resolution to denounce the Ku Klux Klan. One side, with William Jennings Bryan its spokesman, was willing to disapprove of the Klan in general terms. Smith and his side insisted that it be denounced specifically, by name. By an extremely close vote, the Smith side lost.

After Smith and McAdoo had "killed each other off," the convention, exhausted, nominated John W. Davis, a Democrat of the Jeffersonian school, formerly in Congress as a Representative from West Virginia and later Ambassador to the Court of St. James by appointment of Wilson.

The platforms of the two parties were in the main reaffirmations of their respective

positions on old issues, including the League of Nations. What weighed most was the mood of the country, responsive to a slogan which at once expressed the feeling of the country and the temperament of the Republican candidate, "Keep Cool with Coolidge." The Democrats carried only the Solid South and Oklahoma. LaFollette carried only his own Wisconsin.

The people liked Coolidge's temperament, and elected him in 1924 because they were enjoying a budding prosperity which they felt Coolidge would not disturb. "The year," said Secretary of the Treasury Mellon, in his annual report covering 1925, "has been a fortunate one for the country." Tersely, the New York Times called it "Benevolent 1925" an "annus mirabilis."

Less oratorically, but factually eloquent, Secretary of Commerce Hoover reported: "The United States has produced and consumed more goods in 1925 than ever before in its history." He added, reflecting his understanding of what business exists for, "our standard of living has been the highest in our history and is of course the highest in the world."

There were some who remembered that plenty may be followed by drought, and recognized the dangers that might turn the present benevolent prosperity into unwholesome boom, and after that malevolent bust. Secretary Hoover, in his report of superlative prosperity, included a warning. Speculation in real estate and stocks, he said, and over-extension of installment buying, might bring peril.

One of the perils, perhaps the most dynamic, was excess of money and credit

due to the inflation that had accompanied the war. A way to check increase of credit was to raise interest rates, and this course was pressed upon the Federal Reserve Board by many, among them Secretary Hoover. But Hoover as a cabinet member was outranked by the Federal Reserve Board. In the creation of that board, the intention was that it should be free from influence by whatever Administration might be in power.

Abundance of credit increased, and this was a precipitating factor among the causes of the collapse of 1929 and the depression following. That collapse and depression determined most of the country's national politics for more than a decade following.

Similarly potent in determining national politics during the 1930's and later, was the condition of farming, and an attempt to overcome it, which Coolidge frustrated.

The farmers had suffered their postwar collapse quickly, in 1921-22. For seven

years they endured the grinding distress of low prices.

Two Republicans, Senator McNary of Oregon and Representative Haugen of Iowa, introduced a bill to set up a government agency with functions which included price-fixing of farm commodities and purchase and sale of them. The bill was vetoed by Coolidge, who called it, in language sensationally violent for him, "an economic fallacy from which this country has every right to be spared." In his veto message he said: "This is bureaucracy gone mad . . . such autocratic domination over our major industry . . . would poison the very wellsprings of our national spirit."

That veto by a Republican President, the frustrating of a measure for farm relief, sponsored by Republicans, and the farm distress of which the bill was meant to be a cure, became a strong factor in the country's politics after 1929. It did not, however, affect the outcome of the 1928 election.

In recent elections the G.O.P. has shown its chief strength in the rural regions rather than in the large cities. Northern industrial states often give us nice, hot battles between widespread Republicans and congested Democrats. —H.B.

Conductors of public opinion polls would have us believe that few voters change their minds after the early part of July. According to this strange theory we love our nominees in November as we do in June. —H.B.

— 1928 - 1932 —

By Louis M. Hacker

When Herbert Hoover accepted the Republican nomination in 1928, he declared: "We in America today are nearer to the final triumph over poverty than ever before in the history of any land. The poorhouse is vanishing from among us. Given chance to go forward with the policies of the last eight years, we shall soon be in sight of the day when poverty will be banished from this nation."

In another year, there were already appearing danger signals—but there was none to read them. Construction was slowing down; automobile and steel production had dropped off; too much oil was being produced. European capital began to flow out of the United States. But the fever of

stock speculation continued unabated, security prices reaching their all-time high in September, 1929. Late in October, the market sagged. In another two weeks it had collapsed; and in a month 25 billions of dollars in market values were wiped out. Panic was followed by recession and recession by depression as confidence fled. Between the high point of September 19, 1929 and the low point of August 1, 1932, this is what happened to the leading common stocks on the New York Stock Exchange: United States Steel dropped from \$241 to \$29, American Telephone and Telegraph from \$304 to \$91, DuPont from \$210 to \$29, New York Central from \$241 to \$16, Allis Chalmers from \$298 to \$6.

This was no break in the stock market alone. The wheels of production slowed down; idleness hung over the land. Between 1929 and the end of 1932 the total physical output of goods was reduced 37 percent; total labor income fell 40 percent; the farmer's purchasing power was reduced 50 percent. In 1929, the national income of the United States—which had so awed the rest of the world—was 82.9 billions of dollars; in 1932 (in 1929 dollars) it was \$50.1 billions. Prices collapsed, and as they did so the burden of debt—on mortgaged farms and small homes, on automobiles and other durable consumer goods bought on the installment plan, on municipalities—became unendurable. And at least 15,000,000 unemployed persons—almost one third of the nation's entire laboring force—were out of work.

Homes were abandoned; youth took to the road; collections of miserable little huts began to spring up near garbage dumps; desperate unemployed veterans formed a "Bonus Army" and began to converge on Washington seeking relief. In August, 1932, after Congress had refused

to sign the so-called Bonus bill, the Bonus Army was ordered dispersed. Veterans and their families were slow in moving from Anacostia Flats, outside of Washington, where they had gathered, and they were driven out by U. S. troops.

Hoover was certain "prosperity was around the corner"; in any case, relief of the needy—by his reading—was the concern of local authority and not the federal government. In 1930, following Hoover's belief that the depression had originated abroad, Congress passed the Smoot-Hawley Tariff Act, which raised tariff schedules to the highest in our history. The result was a further contraction of our foreign trade and further decline in America's export industries. Efforts were made to assist agriculture through the creation of the Federal Farm Board (1930), which was empowered to buy up cotton and wheat surpluses. And distressed railroads, banks, and insurance companies were offered a helping hand through the establishment of the Reconstruction Finance Corporation (1932). Small loans were also made to states and cities to help in the relief problem.

By Thomas L. Stokes

Herbert Hoover was nominated by the Republican convention on the first ballot. Some were skeptical—the professional politicians who distrusted a man who had never run for public office and had seldom cast a ballot, and the high priests of American finance and industry. Hoover had been safe enough as Secretary of Commerce, but now a group of intellectual "liberals" were claiming him for their own and predicting great things.

Alfred E. Smith triumphed easily in the Democratic convention. For the third time, his name was put in nomination by Franklin D. Roosevelt.

Al Smith refused to accept the "dry platform" his party adopted at Houston and announced that he would write his own personal platform on the issue, which was for "fundamental changes" in the prohibition law to "secure real temperance, respect for law, and eradication of existing evils," but not for return of the saloon.

He pledged farm relief along lines of the

McNary-Haugen bill, and development of public power—both popular in the West.

Hoover was for what he called "an experiment . . . noble in purpose," shortened in popular language to "the noble experiment," meaning prohibition. He had more conservative views than his opponent on farm relief. He was primarily the apostle of continued prosperity, which the Republican National Committee put very alluringly in advertisements promising "a chicken in every pot and two cars in every garage." Hoover, himself, proposed to banish poverty in America. His victory was overwhelming, over six million majority. He shattered precedent by breaking into the Solid South, carrying Virginia, North Carolina, Florida and Texas, reflecting the religious, social and prohibition antagonism to Al Smith, the man from the sidewalks of New York.

Never had a man entered the White House with so high promise. But, like Taft some years earlier, Hoover was caught

quickly in a tariff impasse which split his party and weakened him for the more serious trouble that tumbled about him later. Senator Borah, of Idaho, induced him to call a special session of Congress for farm relief and tariff adjustment to protect agriculture. Borah feared the effect of Al Smith's espousal of the McNary-Haugen proposed solution so popular in the West.

Within less than three months Hoover got through Congress his first farm bill setting up a Federal Farm Board to lend money to farm cooperatives to buy up farm surpluses and take them off the market by storing them or selling them abroad. This did not satisfy the western agrarians, including Borah. Next, they were definitely alienated by the turn that the tariff issue took. Borah had understood that Hoover intended to limit tariff revision to agriculture. But the President included "limited revision" of industrial rates. This invitation was seized eagerly by the industrialists and they came pouring through the breach to produce eventually, through the familiar log-rolling process, the Hawley-Smoot Tariff Act that became notorious throughout the world. Borah and the Westerners joined with Democrats, progressives, internationalists and outstanding economists, in imploring the President to veto the bill. He signed it.

This identified Hoover with the conservative element of the party and its business affiliates. Western insurgents worked with Democrats against him. He was handicapped further when Democrats assumed control of the House in 1931.

The depression had become a reality. Washington and the East woke up to it suddenly and belatedly with the stock market collapse in October, 1929.

Hoover reacted with phrases that became ironic and returned to plague him—about prosperity being "just around the corner" and business being "fundamentally sound." He did recognize at the outset, however, the responsibility of the President and the Federal government for leadership. He began to act in the traditional way, that is, through conferences and committees. He called railroad leaders to the White House and asked them to help by maintaining normal construction work. He summoned

business and labor leaders two days later—that was in November, 1929. He got a pledge from industrialists not to cut wages, but sincere though it may have been, it was not long kept.

He recommended additional appropriations for federal public works, which Congress gave him, and set up a national committee on unemployment. Out of this came local committees to persuade business and industry to hold the employment line. Much publicity produced little results.

As the unemployed became a great multitude, the issue arose as to whether the federal government should appropriate money directly from the Treasury for relief. It came up first, and in a relatively minor way, in Congress early in 1931 in connection with a drought in southern and southwestern states, which hit Arkansas with particular intensity. When a bill to appropriate \$45,000,000 for loans to drought sufferers for purchases of seed and feed for cattle came up in the Senate, the Democratic leader there, Senator Joseph T. Robinson, of Arkansas, sought to attach an amendment for an appropriation of \$20,000,000 to feed the human sufferers.

Here Hoover took his stand against direct federal appropriations for relief, seeing how a precedent might be established for broad application later in the general depression situation. The chairman of the Red Cross, John Barton Payne, after a conference with President Hoover, went before the House Appropriations Committee, to which the bill had now returned with the Senate amendment, and announced flatly that the Red Cross would not assume the task of dispensing relief money voted from the Federal Treasury. Some Democrats and Republican insurgents in both branches of Congress asked bitterly whether Congress was going to vote money to feed animals and not human beings. Hoover retorted, "Our American system requires that municipal, county and state governments shall use their own resources and credit before seeking such assistance from the Federal Treasury." He did promise, however, that "if the time should ever come that the voluntary agencies of the country together with the local and state governments are unable to find

resources with which to prevent hunger and suffering in the country, I will ask the aid of every resource of the federal government because I would no more see starvation amongst our countrymen than would any Senator and Congressman. I have faith in the American people that such a day will not come." The item was eliminated from the bill.

But a day did come when the President was forced to move with direct federal action—not direct appropriations to feed people, but financial assistance to shore up the tottering financial and industrial structure that now was beginning to crack at the seams. This was through creation by Congress, on Hoover's recommendation, of the Reconstruction Finance Corporation, the world's greatest bank, which was authorized at first to lend to banks and other financial institutions and railroads.

The RFC solution of Hoover brought criticism upon him for using the resources of the federal government to bail out "the big fellows" while still resisting direct appropriations for the "little fellows" at the bottom of the economic heap. But he was being beaten back slowly by circumstances and he compromised, too, on this front by approving inclusion in the over-all relief bill embracing the RFC of an appropriation of \$300,000,000 for loans to states for direct relief, which nobody ever expected would be paid back, and which were not. They were subsequently canceled. However, Hoover had clung steadfastly and stubbornly through the "loan" medium to the principle that there should not be direct appropriations from the Treasury for relief, which to him was contrary to our system of government and, impolitic as it was, it took a raw sort of courage in the face of conditions, for he was a man of proved humanitarian impulses. Millions and millions could not understand such a principle in a democracy.

The Omnibus Relief Bill also included an appropriation of \$322,000,000 for public works, which had been reduced, on Hoover's insistence, from \$1,200,000,000.

Things got worse. The Bonus Army, several thousand jobless veterans, converged upon Washington. They were routed out one night, on orders of the President, by

General Douglas MacArthur, Chief of Staff of the United States Army. They dispersed peaceably. The Bonus Bill was enacted by Congress, vetoed by President Hoover, passed over his veto.

Last of all came the thundering crash of banks all over the country.

Hoover's Administration was so engulfed in the emergency that neither he nor Congress had much time for other measures. During his Administration, however, a reform long sought by labor was accomplished in the Norris-LaGuardia Act to restrict the use of Federal court injunctions in industrial disputes, which the President approved.

A Federal Power Commission was created to supervise private utilization of water-power for electricity. President Hoover was for this reform, but he refused to approve the principle of government ownership and operation of power plants as embodied in the Norris Muscle Shoals bill. Like Coolidge before him, he vetoed that measure.

President Hoover appointed a commission headed by George W. Wickersham to investigate prohibition. A majority favored some change, but Hoover still opposed any change. Toward the close of Hoover's Administration, however, Congress submitted a repeal amendment to the states.

During his Administration, Congress approved another constitutional amendment, the twentieth, sponsored by Senator George W. Norris. It abolished the "lame duck" session of Congress, which served for 13 months after election. The date of the meeting of Congress was advanced to January 3, when members elected the previous November would take their seats. Inauguration of the President was advanced from March 4 to January 20.

In the Far East there was an ominous prelude to the future when Japan began her conquest of China by the seizure of Manchukuo, and here President Hoover moved with vigor that merited a better reward. Our government through Secretary of State Henry L. Stimson called on the other signatory powers to the Kellogg-Briand Pact to join in stopping this aggression. But Great Britain and France declined.

President Hoover had a series of conferences with President-elect Roosevelt in the interim between election and assumption of office by the new Democratic Ad-

ministration. Roosevelt declined to commit himself in advance on international policy, and declined to accept joint responsibility in action closing the banks.

By Mark Sullivan

Nearly a year before the 1928 Republican convention, President Coolidge, taking notice of suggestions that he be nominated for a third term, gave out a statement, "I do not choose to run." After a searching of dictionaries, and pursuing variations of the new England idiom to the Vermont hills that were Coolidge's birthplace, in order to find the precise shadings of refusal and firmness conveyed by the word "choose," the conclusion was that Coolidge was not available. The nomination was given to Secretary of Commerce Hoover.

When the Democrats nominated Governor Alfred E. Smith of New York, it was, to a considerable degree, an act of resignation on the part of Southern and "dry" leaders of the party. They recalled the deep split in the party caused by the rivalry of "wet" Smith and "dry" McAdoo in 1924. They recognized the power of Smith's personality and the strength of his following, and the momentum of the "wet" cause. They knew also the harm done the party by widespread feeling that one of the causes of the rejection of Smith in 1924 had been his religion.

That religion had a part in the campaign and election could not be denied. The frank opposition to Smith on the ground of his "wetness," and his association with Tammany, carried with it an opposition, sometimes open but often silent or furtive, based on his religion. Hoover, distressed by it to the marrow of his maker humanity and tolerance, publicly repudiated it and sternly insisted that party workers everywhere do the same. Then, in the election, Smith lost five Southern states, habitually and strongly Democratic and also strongly Protestant, the charge that religion played a part was cepted as convincing.

Barely seven months after Hoover was inaugurated, economic storm loosed its initial thunderbolt, in the form of a collapse

of prices on the New York Stock Exchange. Month after month, his back to the wall, Hoover confronted blow after blow—spreading unemployment, falls in prices of farm products already low, homes and farms lost by foreclosure of mortgages, shutting down of industrial plants, bankruptcies of business—the sum of all, a spreading economic paralysis.

After a year and a half, by about early Spring of 1931, there was evidence that the storm had lost its force and on this assumption there was a stirring of hope and confidence. But soon came a new storm, the more unexpected and discouraging because it came from abroad. The initial blow, failure of a central bank in Vienna, important throughout the finance and industry of Central Europe, was followed by other blows including termination of German payments of reparations to Britain and France. Each blow caused others, like falling cards. Presently there was flight of gold from one country to another, and then, as faith was lost in the sanctuary, flight to still another. Gold, Hoover remarked, was like a loosed cannon plunging about on the deck of a ship in a storm.

That the constant stress and wrenching strains of the depression would endanger the country's economic system and even its form of government, was plain enough. Country after country had gone collectivist and authoritarian, either the Communist type of Russia or the Fascist type of Italy. If ever America was in danger of revolution, if it was susceptible to revolution, this was the time.

This, Hoover realized. The business and industry of the country must be buttressed, and distress of the people relieved, and this necessitated emergency measures. But the measures must be so chosen and so administered as not to destroy the country's economic and governmental system, or start a process that would end in destruction.

The careful path was hard. A basic detail of it, in Hoover's mind, was that the country must be kept solvent, to the end, among others, that its currency remain sound. There must be spending, of course, to relieve distress and to buttress banks and other institutions. At the same time there must be a guard against the danger that mounting deficits might bring, wreck of the country's credit and of its currency which, as had happened in other countries, might open the way to totalitarian government. Hoover's measures for relief inevitably involved large expenditures. But he held that while the federal government should use all its powers, it should preserve the fiscal strength of the country.

Hoover managed it. After more than

three years of his Administration, a commentator wrote in August 1932: "No change has been made in American institutions. The government, as Hoover heads it today, is the same with which he was entrusted. Nine out of ten countries of the world have either changed their form of government, or gone through revolution, or abandoned their standard of currency, or adopted other autocratic measures."

Election returns in recent years seem to indicate that newspaper editorials have little influence upon the readers' votes. The views expressed by the editor are not necessarily those of anybody except the owner of the paper.

— 1932 - 1936 —

By Louis M. Hacker

The New Deal of F. D. Roosevelt meant the return of the interventionist state; but it was a state that was far more powerful than anything Theodore Roosevelt or Woodrow Wilson had dreamt of. The new state—called the social-service state by its friends, the bureaucratic state by its enemies—intruded into virtually every aspect of the American economic and social scene. It imposed regulations and controls on business; it became an enterpriser itself, buying and selling, lending and borrowing, building and managing; it used its great fiscal and financial powers to redistribute wealth and to create income; it embarked on an elaborate program of social security. Part of the New Deal program was hastily-contrived improvisation; part of it was carefully-planned reform. The New Deal sought to bring back recovery into the country's economic life and to stabilize business. Seen in its simplest relations, its methods were two: to redistribute income by improving the purchasing power of the country's farmers and workers; and to use government spending—so-called deficit financing—to prime the business pump and to replace private investment by public outlays. This was not socialism by any stretch of the imagination. In fact, Roosevelt declared repeatedly it was his inten-

tion to preserve capitalist institutions; and he did so. But it was capitalism with a difference that emerged. For it was state capitalism. Through fiscal policy, government was in large part directing the course of business. To put it simply again: confidence was restored, but the prices paid were heavy—in an unbalanced budget and a vastly increased public debt; and in an extraordinary expansion of the federal offices.

The outstanding New Deal programs were the following: 1. *It set to work to restore and support prices.* Among other devices used were the following. The dollar was devalued—by the Gold Reserve Act of 1934, under which the President fixed the value of the dollar at 59 cents. He was also permitted to buy gold anywhere at \$35 an ounce. Limitations were imposed on the production of agricultural products, petroleum and coal, floors being fixed on prices. The AAA of 1933 also used crop loans and subsidies to make production controls effective. Codes of fair competition in industry—authorized by the National Industrial Recovery Act of 1933—were hoped upon to eliminate cut-throat methods.

2. *It reduced debt.* For agriculture through the Federal Farm Mortgage Corporation; for home owners, through the

Home Owners' Loan Corporation; for businessmen, corporations, and municipalities, through radical changes in the bankruptcy law.

3. *It revived and expanded credit.* It expanded the powers of the RFC and increased its revolving fund to more than 4 billions of dollars. It established virtual public control over the Federal Reserve system by the Banking Acts of 1933 and 1935.

4. *It raised the purchasing power of labor.* Through section 7(a) of the NIRA and the National Labor Relations Act of 1935, trade unions were recognized as the workers' bargaining agencies. The great mass production industries—steel, automobiles, rubber, electrical goods—soon were unionized and employment was stabilized and wages raised. The Fair Labor Standards Act of 1938 fixed a minimum wage and a maximum hour work week and made possible the abolition of child labor.

5. *It made this last connection, by a single stroke and through departmental order, a great reform was achieved after decades of heart-breaking failure.* Children—in most states of the Union—could now go to school through the age of 15 at least.

6. *It helped the building of homes.* The United States Housing Authority, with government financing and subsidies, was to assist public authorities to build low-cost housing.

7. *It moved to protect the investor and the saver.* This was done through two new government agencies—the Securities and Exchange Commission and the Federal Deposit Insurance Corporation.

8. *It launched on a great social experiment in connection with electric power.* The Tennessee Valley Authority (1933) was set up to protect the valley from floods and dam construction, bring electric power and light into one of the poorest regions of the land. Here the successes of the New Deal were impressive.

9. *It revived foreign trade.* This program was carried out through the reciprocal trading agreements Secretary of State Hull wrote; and through the Export-Import Bank, which financed the flow of goods.

10. *It came to the relief of the needy and began a program of social security.* The Works Progress Administration created jobs for the unemployed; the Public Works Administration launched long-term public construction projects; the Social Security Act (1935) made provision for unemployables and created an unemployment-insurance machinery and provision for the retirement of America's workers.

The results? Capitalism was saved—from the demagogues and witch doctors like Long and Coughlin who, behind fair words, really threatened America's free institutions. Agriculture was revived. Labor, clothed in its new dignity, organized and made its voice heard in the creation of business policy. There were not more than two million organized workers in 1930. Ten years later their numbers were 13 millions. A powerful influence here was the C. I. O. which, appearing in 1935, organized the great mass-production industries. The foreclosure of mortgages ceased. While business was healthier, there still remained at least 9 million unemployed at the end of 1936, however.

The fact is, because recovery was so closely linked with deficit financing, it was not unlikely that the government's spending and lending policy was frightening off new business investment. Federal budgets remained unbalanced; taxes were pushed up—making it hard for new venture capital to appear. In the 1930's, the federal debt was increased from about 16 billions of dollars to more than 40 billions.

Whatever the cost, the American people continued to show their confidence in New Deal men and measures by re-electing Franklin D. Roosevelt for a second term in 1936.

It has always seemed to me that the one set of persons who must top all others in excuses for laughter are the newspaper composers and proofreaders. They have to read all the political platforms—H.I.P.

Just for the novelty, we wish a candidate for office would some day get all mixed up and join a baby tribe, kiss a Blackfoot Indian and be photographed patting a locomotive on the head.
—H.I.P.

By Thomas L. Stokes

The overwhelming verdict of the American people against Herbert Hoover was foreseen months before the event. Defeatism was apparent in the convention which assembled in Chicago to renominate him.

Democrats gathered afterward in Chicago in triumphant mood and left even more triumphantly, sent off to their campaign by the ringing appeal for a "new deal" by their candidate, Governor Franklin D. Roosevelt of New York, who broke precedents by flying to Chicago from Albany after his nomination to address the convention in person. His nomination had come on the fourth ballot after a show of resistance by other candidates, among them, his one-time sponsor and now openly declared enemy, Alfred E. Smith, who thought he deserved another try.

Nowhere in the concise and unusually short platform, which heavily stressed government economy, a balanced budget and sound money, was there any hint of the era that followed. His campaign speeches contained no blueprint of the sweeping changes he fostered subsequently, though he did outline a broad philosophy, which was that the American economy must be readjusted so that its benefits would be distributed more equably. It is unlikely that campaign speeches had much influence with the people at large. They wanted a change, and they voted it, overwhelmingly, over seven million majority, casting twenty-two million votes for Roosevelt. Hoover, who got 15 million, carried only six states in the East and Northeast.

Roosevelt electrified the nation with his inaugural address—"the only thing to fear is fear itself"—standing on the platform at the front of the Capitol, head bared to the raw March wind, instilling courage into a dejected and despairing people. He had said, "We must act quickly"—and he did. Two nights later he closed the nation's banks under a plan worked out by Treasury officials of his Administration in cooperation with Republican officials who had remained behind, at his request, to assist. The following night, in the first of his famous "fireside chats," he explained the problem to the people in

simple terms over the radio. He had summoned state governors to the White House a few hours after he took office to appeal for their cooperation, and to them, reflecting the basic conservatism of the platform, he said that while the federal government must prevent anyone from starting, the primary responsibility was upon states and localities, and the federal government should not act until their resources had been exhausted. He called Congress into special session before he had been in office a week and there began the amazing series of legislative acts to repair the broken economy, beginning with an emergency banking act providing regulations for opening of the banks, also drafted cooperatively with former Republican Treasury officials. It was rushed through Congress, because of the urgency, before members even had a chance to read it.

Every front was attacked boldly and resolutely in what became known as "The First Hundred Days." To provide jobs in industry, there was the National Industrial Recovery Act, setting up the NRA which provided for exemption of business and industry from the anti-trust acts to stimulate voluntary codes establishing the 40-hour week to spread employment and minimum wage scales to inject purchasing power into the bloodstream of business. Included in NRA codes also was the famous Section 7a to guarantee labor the right of collective bargaining which opened the way for organizing campaigns for labor and which dealt with the wages and hours standards, laying the basis for subsequent legislation.

To resuscitate agriculture, there was the Agricultural Adjustment Act, creating the AAA—Agricultural Adjustment Administration, equally famous in the field of farming, under which, to meet the surplus problem, crops were limited and farmers were paid benefits for taking land out of cultivation from proceeds of a processing tax levied at the processing level.

To relieve unemployment among youngsters who could find no jobs, there was created the Civilian Conservation Corps providing work in conservation of forest and forest resources. For protection of

In May, 1935, the Supreme Court effectively killed NRA by holding substantial features of it unconstitutional. A few months later, in January, 1936, the Su-

preme Court likewise nullified AAA by holding that the processing tax for financing it was unconstitutional. Both of these decisions stirred up a great issue.

Even before the Roosevelt Administration had taken office, Congress had accepted the mandate of the election on national prohibition and began the process of rooting it out of the Constitution by submitting to the people for ratification the 21st Amendment to repeal the 18th Amendment. Soon after he entered the White House, President Roosevelt recommended to Congress a law legalizing light wine and beer and Congress authorized 3.2 percent beer and wine in a bill that he signed into law March 22, 1933. National prohibition finally came to an end on December 5, when ratification of the 21st Amendment was completed.

In another direction, however, the Ad-

ministration was successful in initiating an international trade promotion policy. Congress enacted what has come to be called "the reciprocal trade program" authorizing the State Department to enter negotiation with other nations to lower tariffs and remove other trade barriers, which took tariffs out of the domain of Congressional logrolling. This policy, for which much credit went to Secretary of State Cordell Hull who long had pioneered it, was an enlargement on the flexible tariff idea originated by Republicans many years before

We have an unwritten law in the United States that a candidate for President must go fishing. Such activities as pitching hay, wearing Indian headdress, running locomotives and attending ball games are optional rather than compulsory. —H.B.

By Mark Sullivan

Franklin D. Roosevelt, after he was nominated for the Presidency and was running against Hoover, advocated and pledged a policy of economy rigorous beyond Hoover's; indeed he accused Hoover of having spent too much. Roosevelt based his emphasis on economy, and also on sound currency, upon recognition that, as he put it after he was elected: "Too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy, we must avoid this danger."

In that spirit, Roosevelt, in his campaign, cried out, "Let us have the courage to stop . . . the deficits . . . and insist on a sound currency." He solemnly affirmed a plank in the Democratic platform for "an immediate and drastic reduction in governmental expenditures . . . to accomplish a saving of not less than 25 percent in the cost of federal government . . ."

Roosevelt, within a week after he became President, acted upon his pledge of economy with a rigor which made his action, so long as it lasted, the boldest step in government economy ever taken by any President. To Congress, March 10, 1933, he sent a message saying: "For three long years the federal government has been on the road

to bankruptcy," with "an accumulated deficit of five billion dollars . . . we must move with a direct and resolute purpose

Roosevelt received authority to cut up to 15 percent in the salaries of government officials and workers, and up to 25 percent in pensions and benefits for veterans. But his stern drive for economy ceased within six weeks after inauguration. In April 1933, paper currency was made no longer redeemable in gold and gold was withdrawn from circulation. A policy of large expenditures, for relief of unemployment and other purposes, was initiated.

Roosevelt retained hope of balancing the budget, later. In his first annual message to Congress, January 1934, he spoke encouragingly of "a definitely balanced budget for the third year of recovery (1935) and from then on . . . a continuing reduction of the national debt." That hope was repeated in every budget message until 1939. By then the accumulated national debt was some 50 billion dollars.

Roosevelt's campaign speeches had not created expectation of drastic innovation. But during his first term he put through a group of measures for the sum of which the "New Deal" came to be a common term

justified by the novelty of the legislation. NRA, suspended the anti-trust laws, established trade associations in industries and businesses, and authorized them to set up codes of fair competition.

The Agricultural Adjustment Act, 1933, authorized limiting of acreage of farm crops and paying of benefits to farmers, the money to be raised by a "processing tax" upon processors of farm products.

By the Tennessee Valley Authority, 1933, the federal government was empowered to develop and sell electric power. The Social Security Act provided old-age benefits based on earnings before the age of 65. The National Labor Relations Act, made collec-

tive bargaining compulsory on employers, strictly forbade what the act called "unfair labor practices" by employers, and otherwise gave far-reaching advantages to labor and labor unions.

The sum of the New Deal innovations became the comprehensive issue in the 1936 campaign. So far as Roosevelt's going counter to his pledge to reduce government spending had a part in his campaign for re-election, it was less a detriment than perhaps an advantage. Much of the Roosevelt spending had been done to provide work for unemployed persons, and the number of these and their relatives was a considerable part of the electorate.

— 1936 - 1940 —

By Louis M. Hacker

The threat of unconstitutionality of the New Deal measures which the Supreme Court had raised—it had voided the NIRA in 1935 and the AAA in 1936—President Roosevelt met in 1937 when he called upon Congress to reform the Court. Congress resisted and the measure died; but the Supreme Court gave way and from thence on it offered no objections to New Deal enactments. In any case, after 1937, the New Deal explored no new fields. In part, this was due to a growing resistance within the ranks of the Democratic party, notably among Southern legislators. In part, it was due to Roosevelt's increasing concern—as had happened in the case of Wilson in 1916—over the state of world peace. In October, 1937, Roosevelt made his famous "quarantine" speech at Chicago in which he warned Americans that we could not remain aloof to what was occurring in Europe and Asia. Germany and Japan were menacing the peace of the world.

The emphasis from 1937 on, therefore, was on recovery; and the leading device continued to be deficit financing. In the spring of 1937 the New Deal sought to curtail government spending and talked of balancing the budget. There set in at once a recession in mid-summer 1937 and this continued until the spring of 1938. With the resumption of public spending in the

summer of 1938 revival once more took place. In 1939 and 1940—as war threatened and then broke out in Europe—the U. S. began to step up its naval and military expenditures. By 1940 there were impressive increases in industrial production and national income and unemployment was rapidly dwindling. While it had not succeeded fully and it had begun to raise serious doubts in the minds of many as to the efficacy of its fiscal policy, the New Deal had proved that in our highly complex modern society, government could no longer stand aloof. Intervention was here to stay; from this position there could be no real retreat. Reforms, on the other hand, were impressive; and the new dignity of agriculture and labor gave a stability to the American economic structure which had almost been destroyed.

These things were almost taken for granted in the election of 1940; few there were ready to talk of turning the clock back to the 1920's. The electorate concerned itself with the third-term issue and foreign affairs; although Mr. Willkie's fears about the great bureaucracy the New Deal was building up were given serious attention. Agriculture in the Middle West returned to the Republican fold, but labor continued to vote Democratic—and Mr. Roosevelt was elected for a third term.

By Thomas L. Stokes

The atmosphere in which the national conventions met in the summer of 1936 was charged with public debate and private discussion about how far the federal government should go, and could go, in using its powers to bring about reforms in the national economy. The question was raised—and it was a momentous issue—by the success with which one of the tripartite branches of the government, the Supreme Court, had nullified outstanding measures of the Roosevelt Administration, among them, NRA and AAA, affecting two great groups embracing millions of citizens, industrial workers and farmers. Roosevelt had given the people a phrase—"horse and buggy age"—by declaring that the Supreme Court would return to that long-ago era by its denial of the powers of the federal government to improve the economic condition of the rank and file.

In renominating Roosevelt and Garner, the Democratic convention at Philadelphia proposed that states be empowered by a constitutional amendment to enact laws affecting the social and economic welfare of citizens in areas where the Supreme Court seemed to forbid state action by its recent decisions.

The increasingly ominous turn of events in Europe with the rise of Adolf Hitler in Germany got a faint echo in the platform, as had the developing First World War in the platform of the convention which named Woodrow Wilson for a second term. The yearning for peace was expressed in declarations reaffirming opposition to war as an instrument of national policy; a pledge of neutrality in disputes of other nations; a promise to continue to work for peace, to take the profits out of war, and to guard against being drawn into war by political commitments, international banking interests and private trading, the last admonition provoked by the Senate Munitions Investigation fixing responsibility for the World War upon banking interests and munitions makers, a theory widely accepted at the time as a result of the latest World War debunking exposé.

The Republican convention at Cleveland, picked Governor Alfred M. Landon of Kansas, a little known figure nationally

who was built up, however, as a budget balancer—he had balanced his budget of necessity, for the state constitution required it.

As his running mate, the convention picked Frank Knox, the Chicago newspaper publisher, Landon's chief rival at the convention, after Senator Arthur Vandenberg of Michigan, also a contender for the first place, had turned down the offer of the vice presidential nomination.

Despite the Republican candidate's personal mild liberalism, and despite the promises he made for all sorts of federal largesse to the farmers, which were a little hard to square with his pledges to balance the budget, he could make little impression against the dynamic Roosevelt. He suffered perhaps the most ignominious defeat for a presidential candidate of a major party in our history, carrying only the states of Maine and Vermont.

Roosevelt waited for three months to strike with his Supreme Court reform plan, which came to be known as "the court-packing plan," providing, as it did, that a new judge would be added to the court for each sitting judge over seventy who did not retire voluntarily—and there were six of these—the theory being that judges should not serve after they had reached the age of seventy. It stirred up a great public debate that served to inform the people that Supreme Court judges were only human beings, after all, and "economic predilections," and thus stand in the way of progress. But, conscious as the public was of the need for reform, this remedy was too tricky, and, during prolonged hearings by the Senate Judiciary Committee, the protest rolled up in such volume that the bill was shelved by the Senate. It split the Democratic party, too. But it served Roosevelt's long-time purpose, for the Supreme Court yielded, under Chief Justice Charles Evans Hughes' guidance, to the temper of the times.

The shift in the Court opened the way for re-enactment of the AAA, formerly nullified by the Court. It approved a new act of Congress providing for direct appropriations from the Treasury to finance the crop limitation, instead of the process

ing tax to which the Court had objected previously. Likewise, the labor decisions encouraged the Administration to push a wage-hour law, prescribing a 40-hour maximum work week and 40 cents an hour minimum wage after three years for industries in interstate commerce. Congress finally enacted it over bitter and stiff resistance from southern Democrats and some Republicans. This was the only outstanding reform breaking new ground in the second Roosevelt Administration.

Further reforms, though projected, were blocked by an increasingly hostile Congress and ultimately were abandoned in the face of the rapidly spreading war in Europe.

Republicans greatly increased their strength in Congress in the 1938 elections, nearly doubling their small membership in the House, 88, to a total of 169, and making substantial gains in the Senate. This enabled Republicans to form a coalition with affected Democrats, largely Southerners who had cooled off to the Roosevelt economic reforms as they began to affect directly the big financial, industrial and farm interests of the South. Thereafter this coalition raised an effective blockade against any more New Deal reforms after the wage-hour law.

Early in his second Administration the President saw clearly the rising danger of totalitarianism in the Hitler regime and the threats of conquest and, in a speech in Chicago in 1937, declaring the need to "quarantine" the aggressors, he set forth the ultimate dangers to the United States from the dictatorial regimes in Germany and

Italy were permitted to continue their courses of conquest unchecked. But the speech was received coolly by a people desirous of peace.

When war broke out in Europe with Germany's invasion of Poland, Sept. 1, 1939, the President proclaimed our neutrality as required by the Neutrality Act passed early in his regime and he called Congress into extra session to repeal the arms embargo of the neutrality act to permit "cash and carry" sales of munitions, that is, the belligerents to buy them for cash and carry them in their own vessels. This was in pursuance of the policy he adopted and proclaimed for the Administration which was to help the Allies to defend themselves and thus keep the war from the United States. It was represented as a move to keep us out of the war. Congress acceded to his request.

In September, in the midst of the presidential campaign, and after the disastrous series of events starting with the fall of France in June and opening of the all-out air attack on England in August, Congress enacted a selective service act to train American young men, but limited it to a year. A month before, the President made the deal for exchange of 50 over-age destroyers to England for 99-year use of sea and air bases in western Atlantic islands belonging to Great Britain. On December 29, he proposed the lend-lease policy, the ultimate step to make the United States "the arsenal of democracy" for the now hard-pressed Allies.

Our political parties like to hold their National Conventions in Philadelphia because that is where this whole business started. Besides, it is a nice, friendly old city and generous with expense money.

—H.B.

An old-time American public official is a man who stutters over a proposal to spend more than a billion dollars.

—H.I.P.

By Mark Sullivan

The renomination of Roosevelt was unanimous. The Republicans nominated Governor Alf Landon of Kansas. Their defeat, with only two states carried, Maine and Vermont, was the worst ever suffered by any major party.

Roosevelt took, less than three months after his re-election, the boldest step of

his Presidency. He had resented the invalidation by the Supreme Court of two key measures of the New Deal, the National Recovery Act and the Agricultural Adjustment Act. The day following the court's invalidation of NRA, which was unanimous, Roosevelt had said the attitude of the court would set the country back to the

"horse and buggy" era. He felt that the effectiveness of the New Deal would be frustrated by the court.

In January, 1937, Roosevelt sent to Congress a bill to give the President authority to add six new justices to the nine who composed the Supreme Court. Roosevelt had not previously consulted any member of Congress. The bill had been written out, to the last comma, in the executive department, by three close associates of Roosevelt, who were the only persons who had knowledge of the measure. Roosevelt's action seemed an assumption on his part that Congress would be a "rubber-stamp."

The bill, called by opponents who arose in large numbers and with much violence, "the court-packing bill," led to one of the most prolonged and bitter battles in the history of Congress. Democrats of the highest rank in the party set themselves sternly against it. The bill was never acted upon. After five months of debate the party leaders in Congress told Roosevelt that the bill could not be passed.

The resentment in Congress and the

country, caused by the court measure, was increased when Roosevelt took a sensational step reflecting resentment of his own. A year later, in the 1938 Democratic primaries for nomination of candidates for the Senate, Roosevelt personally went into the states of three Senators—George of Georgia, Tydings of Maryland, Smith of South Carolina—and urged that they not be renominated. All were re-elected.

The feeling of the country was expressed in the congressional elections of 1938. In the preceding election, 1936, Republican representation in the House had been reduced to the lowest proportion either party had had in recent history. There were predictions that the party would cease to exist as a major party. But in the congressional election of 1938 the Republican strength in the House was almost doubled

Can you remember away back when you could tell a kid he might grow up to be President and not cause him to age prematurely?
—H.I.P.

— 1940 — 1944 —

By Louis M. Hacker

When the third Roosevelt Administration opened, mobilization for defense was already under way; before its first year was over the United States was at war and mobilization for war had to be pushed seriously. From 1934 to 1939—after Hitler had come to power—Americans had begun to express concern over possible involvement in another world conflict. Aware of the fact that neutrality was impossible—World War I had demonstrated that—serious thought was given to the possibility of maintaining isolation. The Johnson Act of 1934, which forbade the flotation of securities in this country by nations in default of their World War I obligations, was the first step. The Neutrality Act of 1935—which set the pattern for the subsequent enactments of that name—was the second. It prohibited Americans from selling munitions to belligerents or granting bank credits to them and denied Americans the right to travel in war zones.

When Hitler struck in 1939, Allied purchases of goods in this country—paid for in cash—were stepped up. Slowly, American expenditures for defense also increased. Continued government spending and exports slowly reduced the total of the unemployed. By 1940 we were moving back into a full-size recovery.

Roosevelt had never believed in the Neutrality Acts' effectiveness; he had, beginning with 1937, been seeking to warn the American people that we could not stand aloof in the face of German and Japanese aggression. When France fell in 1940 and only Britain remained to protect our flank, the ingenious invention of lend lease made its appearance. In March, 1941 Congress enacted the bill; and now the U. S. could send munitions and goods to Britain and China despite the neutrality laws. It is enough to say that from 1941 to V-J Day we sent out \$44 billions of supplies to our allies in the war.

After Pearl Harbor the United States turned to the preparation for war seriously. Men, resources and labor were mobilized. A total of almost 10 million men was called to service during 1940–45. A large group of wartime agencies made their appearance of which the most important were the Office of War Mobilization, the War Manpower Commission, the War Labor Board, and the Office of Price Administration. These worked very effectively; the American people supported the Administration—there was remarkably little anti-war sentiment; and a miracle in production was the result. We built a new merchant marine of vast proportions, a great air fleet, literally hundreds of new warships, and enormous quantities of tanks, trucks, cars, guns and munitions. We had our guns and did our allies; but we had our butter, too, for consumer demand was also met. In the face of a labor force that grew beyond 50 millions.

The gross national product of goods and services, which had been \$90 billions in 1939, climbed to \$159.6 billions in 1942 and to almost \$200 billions in 1945. Whereas 1939 war expenditures represented only 10 percent of the total product turned out, in 1942 they represented 33 percent.

Prices, of course, went up but thanks to controls all along the line not nearly as sharply as they had during World War I.

The cost-of-living price increase was 30 percent during 1940–45. Wage adjustments had to be made and were; in fact, because American productivity had advanced so sharply, labor gained as much as did capital. Therefore, *real* wages increased during the war—again the reverse of World War I experiences.

The American people bore the dislocations of the war effort without protest. Plants worked 24 hours; housing was hard to find in new, mushroom war centers; children had to fend for themselves; transportation presented a problem because of gas rationing. Government expenditures increased enormously—in 1941, outgo was \$14 billions and in 1943, \$79 billions; and while taxes were increased government's chief dependence was upon borrowings. At the end of the war the national debt—which had been \$40 billions in 1939—stood at almost \$260 billions. Yet there were real checks on inflation; in taxes, savings, limitations on credit expansion. The United States had learned important lessons as a result of its careful study of the mis-handling of such policies during World War I. We could not save our national resources, of course; iron, oil and wood reserves were disappearing at an alarming rate.

It was in the midst of war that President Roosevelt ran for a fourth term in 1944.

By Thomas L. Stokes

Roosevelt was renominated to break the precedent against a President seeking a third successive term, and the atmosphere about the 1940 Chicago convention had a cynical tinge because of a lot of clap-trap about a "draft" that was no "draft" at all, since it all had been planned in advance. Vice President Jack Garner, who was influential in the formation of the South-Democrat-Republican coalition in Congress to check further New Deal reforms, was dropped, and Secretary of Agriculture Henry A. Wallace was imposed by President upon a reluctant convention as a gesture to the now neglected New Farmers.

A new figure emerged as the nominee of the Republican convention in the engaging

person of Wendell L. Willkie, once a Democrat, a lawyer-businessman who directed a great private utility. His nomination was the culmination of a coup by a strange combination of big business backers, who had financed a short but very effective propaganda campaign in his behalf beginning only a few months before the convention, and zealous "amateurs," as they were called, consisting of people all over the country who were weary of the old type politicians and political hacks and wanted a new face and new blood. The influence this combination brought to bear on the convention bowled over experienced and practical politicians who were on the verge of putting over Senator Robert A. Taft of Ohio, after the early front-runner, Gov-

ernor Thomas E. Dewey of New York, had wilted.

Willkie was one of the few at that convention who sensed the real threat to our own security in war developments in Europe, though the convention assembled only a few days after the fall of Dunkerque, the fall of France and the triumphant entry of the German army into Paris. The platform opposed involvement in foreign wars, charged that the Democrats had left the nation unprepared; pledged to build up national defense, and condemned President Roosevelt for utterances and acts leading to war. It favored aid to peoples fighting for liberty if this did not violate international law or weaken our own national defense. The Republican party had become the party of isolation, though its nominee was in the internationalist tradition, as he had made clear in speeches in the weeks preceding the convention.

Willkie accepted most of the New Deal economic and social reforms, but promised, if elected, to administer them better. As for the main issue of war or peace, both Roosevelt and Willkie promised not to send American boys to fight in "foreign wars."

The intense popular interest in the election was shown in a total vote of slightly under 50,000,000. It was divided: Roosevelt, 27,243,466; Willkie, 22,304,312, with the rest going to minor parties. Roosevelt got 449 electoral votes, carrying 38 states, while Willkie carried 10 states for an electoral vote of 82.

Soon after the beginning of 1941, Roosevelt created the National Defense Advisory Commission to administer production. Jointly headed by William S. Knudsen, of General Motors, and Sidney Hillman, C. I. O. President, it was the first of a series of defense and war production agencies which grew, one out of the other, in successive reorganizations, with new names and initials, to end finally in permanent form in the War Production Board, W. P. B., into which thousands of businessmen were enlisted. In late May, 1941, Roosevelt declared an "unlimited national emergency." The continuing hold-back in the nation, despite the relentless advance of the German war machine, was manifest

in Congress in August when extension of the draft act was carried in the House by a single vote, 203 to 202, with Republicans making a party fight against it. But Pearl Harbor, on December 7, changed all that, and the nation girded itself for its battle for survival. Congress voted billions upon billions for the war, and the nation was regimented in a manner that made regimentation of the First World War almost insignificant.

Of many dramatic episodes in Congress during Roosevelt's third Administration, of which the declarations of war on Japan and Germany were outstanding, was another occasioned by President Roosevelt's veto of a tax bill, the first veto of a tax bill in history. Congress was angered at this interference with its prerogative of control of the purse, and, in the Senate, the Democratic leader, Senator Alben W. Barkley, denounced the President from the floor, and resigned his leadership in one of those theatrical displays to which Congress and Congressmen often resort. He was, of course, promptly re-elected to carry out the plot, and Congress passed the bill overwhelmingly over Roosevelt's veto. The President had deplored the measure, which offered very favorable tax terms for renegotiation of war contracts, as "providing relief not for the needy, but for the greedy," and said it was "replete with provisions which not only afford special privileges to favored groups but set dangerous precedents for the future."

This tax bill was illustrative of the preponderant conservative influence in Congress. This conservatism was heavily entrenched by the 1942 Congressional elections when Republicans all but captured the House, running their strength there to 209, just nine short of a majority, and with a gain of ten seats in the Senate to bring their total to 38 in that body where 49 is a majority. These gains made possible a firm and workable coalition of Republicans and conservative southern Democrats that successfully blocked any domestic legislation in the New Deal pattern, and, on the other hand, provided such favorable terms for big interests to capitalize on their opportunities during the war, not only in award of contracts, re-negotiation and tax allow-

nces, but also for purchase of surplus war plants, that they emerged greatly strengthened from the war, and with new potentials for monopoly.

Repeatedly during Roosevelt's third Administration conservatives sought to pass bills restricting privileges of labor unions. Such measures were passed by the House, but always stopped in the Senate. However, under provocation of John L. Lewis's coal

strikes and threatened strikes, Congress finally passed what was known as "the anti-strike" bill, a war emergency measure to expire six months after the end of hostilities. It gave the President power to seize plants and mines when there was disturbance to production by strikes, and prohibited strike activity by union leaders in seized plants or mines. The President vetoed the bill.

By Mark Sullivan

It was the outbreak of the war in Europe, and the need of America to take account of—need, as the overwhelming majority of Americans felt, to avoid involvement in it—that provided much of the justification for Roosevelt's attempt at a third term. Roosevelt as President was familiar with the war and the implications it had for America.

In the vice presidential nomination, a change was made. Roosevelt's running mate in his first two campaigns, John N. Garner of Texas, was thought by many New Dealers to be too conservative. He was supplanted by an outstanding symbol of New Deal philosophy, Henry A. Wallace.

In the Republican convention, the two leading contenders, Senator Robert A. Taft of Ohio and Governor Thomas E. Dewey of New York failed to make progress after the early balloting. The convention turned to one who most of his life had been an active Democrat, and who, until shortly before, had been little known to the country, Wendell Willkie.

The Democratic platform was forthright and specific: "We will not participate in foreign wars, and we will not send our

army, naval or air forces to fight in foreign lands outside of the Americas, except in case of attack." The Republican platform was tersely firm: "The Republican party is firmly opposed to involving this nation in foreign wars. . . . We are still suffering the ill-effects of the First World War."

To Roosevelt's prospects for election, the war was at once a detriment and an advantage. As President he had to go on with steps for preparedness. The Draft Act was passed and signed by him at the very height of the campaign. But Roosevelt had the strings of foreign relations in his hands, and presumably could avoid involvement better than a new President. Moreover, most of our people earnestly wished Britain and France to win, and hated Nazi Germany. This was Roosevelt's feeling, and his frequent expressions of it, making the Germans angry, had caused them to retort with denunciations of him.

On December 7, 1941, the qualifying clause in the Democratic platform "except in case of attack" was invoked by the attack of the Japanese at Pearl Harbor. The following day we declared war against Japan, three days later against Germany.

— 1944 – 1948 —

By Louis M. Hacker

Before the first year of the fourth Roosevelt Administration was over the war in Europe and Asia had ended victoriously; Roosevelt was dead. The country's reversion to peace amazed ourselves and the whole world. Reconversion was a painful process economically and socially. The military and industrial army was

demobilized and men and women returned to work or their homes or thronged into schools and colleges, in this last connection helped by the G. I. Bill of Rights. Wartime controls over production and prices were discontinued, the OPA being dismantled by the fall of 1946 (except in the case of rents) and regulations of installment sell-

ing terminating by the fall of 1947. The United States was back fully on a peacetime basis two years after V-J Day.

All the forebodings of pessimists and ill-wishers turned out to be idle! Instead of large-scale business recession setting in, the reverse occurred. A boom of immense proportions at once developed; and it was soundly based, for it grew not on credit inflation but on the great and unsatisfied needs of Americans for capital and consumer goods. Pent-up purchasing power—a power that continued to expand because of increases in *real* wages—absorbed all the food, clothing, autos, houses and services America could produce. And prices were bid up in consequence. Part of the prosperity was linked with Europe's great need as America vastly expanded its exports to send food, fuel and machinery to a continent ravaged by war and suffering from the worst famine in modern times.

By mid-summer of 1947, President Truman could justly say: "Americans today live in a richer and more productive economy, and are enjoying its benefits more equitably, than ever before in peacetime history." The country was producing goods and services at the rate of \$225 billions annually. Sixty million people were employed. Farm income was reaching a record level (three times that of 1939). Management and labor were co-operating in maintaining industrial peace. Productivity was on the increase. The average factory worker's weekly wage in September, 1947 was \$50.42—the highest in our history. Since 1939, *real* wages had increased 30 percent. And while government expenditures continued on an enormous scale—the U. S. was spending at the rate of \$46.8 billions annually in 1947 as compared with less than a billion before the outbreak of World War I—Washington showed its ability to balance the budget. During the fiscal year 1947, in fact, there was a surplus of \$5 billions. President Truman sought to pursue this course; it was his chief reason for resisting tax reduction. This was the other side—and the correct one—of deficit financing.

There were disturbing elements in the picture, however. Housing construction was lagging seriously. In mid-year 1947, notably,

prices began to move up sharply; in fact, from October, 1946 to September, 1947, prices rose 39 percent and came close to the peak of May, 1920. In part, this was due to the new round of wage increases which took place in the spring of 1947; more particularly, it was due to food and primary-goods shortages. A bad corn year, great food exports to Europe, the finishing of meat animals and poultry with wheat, and increasing domestic demand due to a larger labor force accounted for unprecedented rises in the prices of meat, bread and dairy products. Other goods in short supply—due to domestic and foreign demand—and therefore contributing to the price rise were steel, coal, agricultural machinery and fertilizer. As a result of the inflationary development, labor was becoming discontented and the lot of fixed-income receivers was an unhappy one. A new round of wage-increase demands threatened as 1947 closed. So did, from more and more quarters, a demand for price controls and even rationing. Indeed, when President Truman addressed Congress on Nov. 17, 1947, he asked for the revival of many of his war-time powers in order to cope with the inflation.

Labor, too, was resentful of the Taft-Hartley Act (an amendment to the Labor Relations Act of 1935). Passed in 1947, over a Truman veto, the new measure limited the powers of unions—although not abridging any of their rights—and protected the liberties of individual workers. The closed shop was ended; jurisdictional disputes and secondary boycotts were banned; union funds might not be used for political purposes; and communists could not be union officials. On the other hand, initiation fees were not to be excessive and workers could not be expelled from unions except for non-payment of dues.

Also, the collapse of Europe involved the United States. American planning proceeded on two fronts: to widen trading opportunities throughout the world and thus bring European goods back into the world market; and to help Europe back to production by developmental loans. The first was associated with the work of Assistant Secretary of State Clayton: it was meeting with heartening results. After

6 months of negotiations at Geneva in 1947, the state department could announce that 18 countries had signed a round of 120 reciprocal trading agreements calling for the reduction of trade barriers. It was expected that as much as two-thirds of the world trade would be involved.

The second was the Marshall Plan, so-named after Secretary of State Marshall. Part of America's difficulties as regards domestic prices hinged on the fact that our export surplus of goods and services in 1946 came to \$8.1 billions; and in the third quarter of 1947 this surplus was running at the annual rate of \$10.3 billions. Europe could not be restored to normality until economic reconstruction was achieved. As a result of the stimulation of the Marshall

Plan, the representatives of 16 European nations met in 1947 and submitted a general program of economic and fiscal rehabilitation which called for American financial aid over a 4-year period. It was then assumed Europe would be on its own feet. Estimates of American assistance ran in the neighborhood of \$20 billions to be spread over these four years.

This was the domestic, social and economic scene as 1948 opened and the great debate of the Presidential year began. Americans faced their own world at home with confidence but were troubled by the fact that Russia—other than its membership in the U. N.—was refusing to participate in any of the international arrangements for economic reconstruction.

By Thomas L. Stokes

With the nation at war, the Democrats had no problem about a choice for President in 1944. It was Roosevelt for a fourth term. But there was a question about the vice presidential candidate. Machine bosses—Frank Hague of Jersey City, Ed Flynn of the Bronx, Ed Kelly of Chicago and Robert Hannegan of St. Louis—persuaded the President in a secret White House conference before the convention that Henry Wallace, if renominated, might alienate enough votes to lose the election, while Senator Harry S. Truman of Missouri, who had won nation-wide recognition as chairman of the Senate Committee that investigated war contracts, was the choice.

Governor Thomas E. Dewey of New York easily won the Republican nomination. His leading rival, Governor John W. Bricker of Ohio, was chosen as vice presidential candidate.

The election was hotly contested. The war undoubtedly saved Roosevelt. Democrats emphasized strongly the need to continue the President in office to win the war. His vote was two million less than four years before. Dewey polled almost the same vote as had Wilkie.

Soon after his fourth term began, Roosevelt made a gesture in the direction of the labor-liberal forces in the party by appointing Henry Wallace, who had campaigned actively and energetically for his reelection despite being dropped from the

ticket, as Secretary of Commerce to replace Jesse Jones, who was summarily retired.

In the climax of the victorious advance of our armies Roosevelt died suddenly, April 12, 1945, only a few months after he had started his fourth term.

Truman was thrust into the Presidency in circumstances perhaps the most trying since Johnson had succeeded Lincoln—in the midst of a great war, and with a Congress in which the progressivism to which he had given support when he was a member of the Senate was now but a minority influence. To the country he appeared the symbol of the average man, with his small town, middle-class background, and the people were attracted. It got him off to a good start.

He inherited the reservoir of cooperation on the war and on postwar international organization that Roosevelt and former Secretary of State Cordell Hull had carefully built up in Congress as a whole, in the Senate in particular.

Truman continued and nurtured this liaison. He included Republican leaders of Congress, and frequently outside of Congress, in the various delegations to international conferences, beginning with the San Francisco conference, called by Roosevelt, which met only a few weeks after Truman had become President, and from which came the United Nations Organization. This bi-partisan cooperation was

decisive in the subsequent, almost unanimous, ratification by the Senate of the U.N.; also in approval of corollary agencies and programs of an economic character—the international bank; extension, once again, of the reciprocal trade program for another three years; the British loan; the International Refugee Organization; the International Food and Agriculture Organization, among others.

Truman adopted the Roosevelt domestic program but he was stymied by Congress. There was one exception, the so-called full employment bill. Congress eventually passed a much watered-down version providing for a three-member Council of Economic Advisers to keep the President informed on economic conditions, and required the Executive to submit an annual message to Congress with recommendations for legislation to keep the economy in balance and also with provision for periodic reports to Congress on changes in the economic condition, if the President deemed such necessary.

In accordance with the law, the President submitted his first economic report in January, 1947, to a Congress then controlled by Republicans, but it was laid aside.

The President soon found himself completely on the defensive on all fronts. In mid-1946 he vetoed a bill that severely weakened OPA. Congress, lacking the votes to pass it over his veto, then passed another, not noticeably much better which he signed under protest that it would not protect from inflation, a forecast that was exact and accurate. Then, with the Congressional elections coming on, he began to retreat. Republicans made an issue of OPA and other controls, and stirred up public clamor over controls on meat. Beef producers virtually went on strike for higher prices, holding their cattle off the market. Just a few days before the Congressional elections in November, 1946, the President abolished meat and other controls, thinking thereby the obvious tide toward the Republicans might be checked.

It did not work out that way. Republicans, in a landslide victory, captured both houses, thus giving the nation a divided government beginning with the Congress of January, 1947. Though the election un-

doubtedly reflected the usual postwar reaction from sacrifices, war restrictions and regimentation, Republicans interpreted it as a "mandate" that the public was tired of the New Deal. During the campaign Republicans had blown up the issue of "Communism" against the Administration, claiming that Communists were influential with the Administration. This seemingly found fertile ground in the growing anti-Russian feeling in the country.

With control in Congress, the Republican leadership began to unfold a program in keeping with the "mandate" they professed to find in their victory, broadly, tax reduction, labor regulatory legislation, and economy. Twice Congress passed a tax bill, twice Truman vetoed it on the ground that tax reduction was inflationary; that the public debt should be reduced, and that it took too little account of the burden on low income groups.

Truman vetoed the Republicans' comprehensive labor regulatory bill that whittled away some of the gains for labor in the Wagner Act. But Congress passed the Taft-Hartley Act over the President's veto. Labor bitterly protested the law and laid plans to make it their leading issue in the next election.

The Republican Congress abolished virtually all remaining controls on housing that had been authorized the year before, leaving only rent control. It thus finished what Truman had left undone when, in another retreat after the election defeat, he had ordered abandonment in December, 1946, of the housing program. Housing Expediter Wyatt resigned on the ground that the abolition of numerous controls by Truman would make his job impossible.

In the name of economy, the Republican House cut deeply the proposed appropriations for public power and reclamation projects in the west, but a howl arose and some funds were restored by the Senate.

The "Communism" issue was carried over into the 80th Congress, manifesting itself in charges that Communists had jobs in government agencies. President Truman met the clamor by an executive order, known as the "loyalty" order, establishing a comprehensive mechanism for re-check-

ing every government employee, an order criticized by liberal groups as not affording employees accused of disloyalty sufficient protection of their Constitutional rights and also for restrictions it placed on information about government activities which were described as an infringement on freedom of the press.

While President Truman advocated, in general, the Roosevelt New Deal program,

his Administration took on a more conservative complexion through changes in the Cabinet and in the secondary posts which eliminated the aggressive and ardent New Deal type of administrators and replaced them with more conservative figures; with the result that the attitude and approach was middle-of-the-road, rather than the dynamic progressivism of the Roosevelt era.

By Mark Sullivan

In the 1944 Democratic convention, a fourth nomination of Roosevelt was facilitated by what had helped toward his third. As in 1940 continuation of Roosevelt in the Presidency was said to be desirable because of the outbreak of the war in Europe. In 1944, the argument was strengthened by the fact that we were now in the war.

Renomination of Roosevelt in 1944 was without serious controversy in the convention. But about the proposed renomination of the Vice President, Henry A. Wallace, there was a bitter contest, the outcome of which had high historic importance. The support of Wallace, mainly by the left wing of the party, came within a hairbreadth of success. But the convention turned to Senator Truman of Missouri.

Had Wallace been renominated for Vice President in 1944, he would have become, upon the death of Roosevelt less than a year later, President of the United States.

From the moment Mr. Truman succeeded to the Presidency, there was under way an acute eruption of a deep issue that perennially recurs, between the Executive and Legislative branches of government. Congress had become watchful about Roosevelt's power. During the last weeks of his life, it had withheld an emergency war power asked for, the authority to allocate manpower in industry. To most emergency war powers, Congress attached provisions giving that body, equally with

the President, power to fix the date when the emergency would be legally terminated. Succession of Truman ended tension with Congress; he seemed indisposed to wish for power.

Of the cabinet President Truman inherited, several resigned or were let go. These included most of the strong New Dealers. The impression created was that Truman would take a conservative course. But among those Truman kept was Wallace, and a cabinet that included him could not be convincingly regarded as middle-of-the-road. In September, 1946, Wallace, acting beyond his Commerce post, gave out a policy about Russia inconsistent with that of the State Department. Mr. Truman let him go.

The congressional elections of 1946 were, as normally, a contest between Republicans and Democrats, but they included a conflict within the Democratic party, between the wing symbolized by Wallace and old school Democrats. The Republicans won 246 in the House to the Democrats' 188. When, in a congressional election coming in the middle of a presidential term, the opposition party wins control of the House, it is by precedent supposed to augur that the party will win the ensuing presidential election. Those who do not accept the augury argue that weather signs fall in times of storm, and the precedents cease to be probative in the condition in which the country and the world are in, in 1947.

It has never been proved that giving the vote to women has changed the result of any national election. As far as we can make out, most wives vote as their husbands tell them to, or vice versa. —H.B.

Politicians have a quaint superstition that a nominee for Vice President can carry his state for the ticket. This belief has managed to survive a long time without any visible support from history. —H.B.

GREAT PUBLIC QUESTIONS OF THE TWENTIETH CENTURY

by PROFESSOR ALLEN NEVINS

De Witt Clinton Professor, Columbia University

Author of "Ordeal of the Union."

International Relations of the United States

AMONG THE CHIEF ISSUES IN THE presidential campaign of 1900 was the question of "imperialism." American expansion into overseas territories raised a question as to which of them would remain dependencies and which would grow into equal states of the American republic. Bryan and the Democrats assailed imperialism as represented by the acquisition of the Philippines and Puerto Rico after the Spanish-American War; the Republicans upheld the new venture. During the decade before World War I, the Republicans continued to urge policies for increasing United States influence in world politics, while the Democrats concentrated on the issues of reform at home. Party positions shifted in the 1920's, making the Democrats advocates of American participation in international organization while the Republicans stood aloof. Experience in the Thirties and World War II has narrowed the differences between the parties.

Between 1903 and 1906, Roosevelt established an American hegemony in the Western Hemisphere. He did not foment the separatist revolution which established the Republic of Panamá in 1903, but he recognized the new republic with benevolent speed and secured from it the canal concessions which Colombia had refused.

In the Pacific, John Hay's Open Door notes of 1899 and 1900 attempted to secure guarantees of the territorial integrity of China and of equal commercial opportunity there for all nationals. Roosevelt's mediation in the Russo-Japanese War in 1905 affected the European as well as the Pacific balance of power, for while a completely victorious Japan might oust the chief Western nations from their commanding position in the Orient, continuance of the war might so exhaust her as ultimately to increase Russia's weight.

As the whirlwind of the Roosevelt Administrations subsided into Taft's calmer term, party positions continued relatively stable. The Democrats attacked the "Dollar Diplomacy" of Republican Secretary of

State Philander C. Knox, who intervened to protect American financial interests in Nicaragua, and to secure opportunities for American capital in China.

Wilson and his party refused to endorse the Chinese loan project and maintained a relatively restrained policy during the turbulent course of the Mexican revolutionary movement of 1913-30. In the Caribbean, however, the Dominican Republic and Haiti were taken over, and their governmental direction was entrusted to American naval officers. The Taft protectorate over Nicaragua was continued.

American interest in World War I divided on sectional rather than strictly party lines, but while Wilson asked the nation to be neutral in thought and deed, Theodore Roosevelt and other Republican leaders urged that the United States take the Allied side. Republican's like Elihu Root and ex-President Taft approved U. S. participation in an organization to maintain peace. Not until the election of 1920 did joining the League of Nations become a party issue. As a result of that election, the Republicans, who began the century with our first ventures into the European balance of power, now drew back, concluding a separate treaty with Germany, and for the twelve years in which their party held power, remained aloof from efforts to maintain peace through international organization.

During the Twenties, too, Republican Administrations began to recede from their earlier policies toward Latin America. American occupation of the Dominican Republic ended in 1924; the marines were withdrawn from Nicaragua in 1933; and it was agreed that government of Haiti by a U. S. high commissioner would end in 1936.

When the Democrats succeeded to power in 1932, their policy did not follow the Wilsonian pattern of action. The Platt Amendment was abrogated in 1934, and the United States gave up the right of intervening in Cuba's domestic affairs, al-

had been provided in 1901 and 1903. Our virtual protectorate over Panamá was surrendered in 1936, and our administration of Haiti was terminated. A Democratic Congress, in 1933, set a definite date for Philippine independence.

In 1934, President Roosevelt judged the Russian government a going concern and resumed formal diplomatic relations. When the Soviet Union was invaded by Germany in 1941, it received lend-lease aid although Republican spokesmen like Herbert Hoover deplored the policy. The Republicans had been willing to initiate multilateral arbitration and disarmament treaties. During the Thirties, they continued opposition to American partnership with other nations in preserving the peace by political action, either in cooperation with the League of Nations or through a program of joint

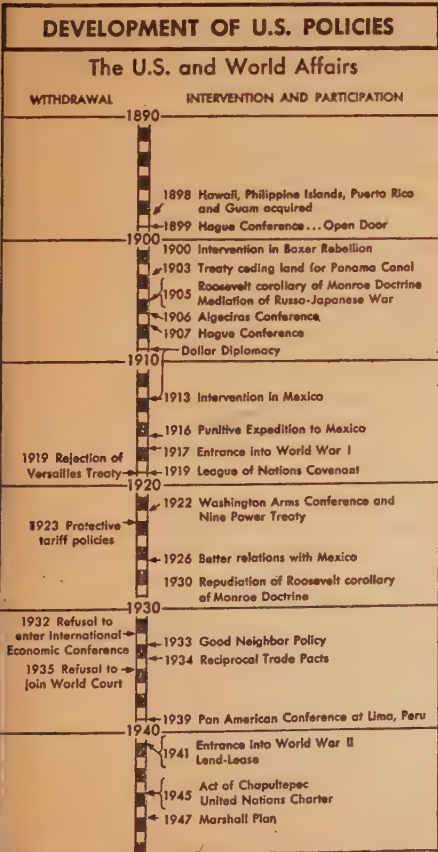

action against aggressors outside the League. Non-participation by the United States was one of the reasons given by the great powers in the League for refusing to impose thorough-going sanctions against Italy and Japan.

During and immediately after World War II, party positions began to approach each other. Before the end of hostilities, support for international organization to preserve the peace came from both parties, as was indicated by the Ball-Burton-Hatch Resolution. The Senate accepted the United Nations Charter by an overwhelming vote, and after relatively little debate. Both President Roosevelt and President Truman laid stress upon the new "bipartisan" aspect of America's foreign policy, the issue of national power outweighing the cleavages of party politics. Yet certain Republicans, Senator Taft particularly, would have the United States limit at least its financial commitments, even while it assumes its position as the most important power in world affairs, and in the world organization which it helped to found.

States' Rights and State Intervention

In a federal government, either the central authority or the states may dominate. Hamilton, and the Republicans who in 1900 were the heirs of his political ideas, insisted that the central government hold first place lest the rights of the propertied minority be destroyed by the whims and envy of the mob. Jefferson, and the Democrats who inherited his political philosophy, insisted that the states extend their sphere to the fullest lest the "monied interest," dominating the central government, overbear the independent farmers who in his opinion should form the core of a free nation. Both accepted the premise that the citizen was possessed of rights beyond any governmental control.

By the first decade of the twentieth century, the Supreme Court had limited the states' police power to regulate the conditions of labor, at least for adult men. It had also interpreted the commerce clause of the Constitution to exclude much of our business processes from "interstate commerce." Theodore Roosevelt, the first Republican to urge that a central govern-

ment conceived in Hamiltonian terms use its power for other purposes than the protection of property and the nation's credit, declared that the sum of the Court's decisions left a "twilight zone" in which economic power might act unchecked. The federal government must undertake regulation and welfare activities. Woodrow Wilson's political theory stressed the rights of the states. He wished to halt all economic concentrations fostered by special favors from the central government, restore free competition, and so limit the need for state intervention to protect the weaker elements in society. Yet he asked Congress to pass the Keating-Owen Bill to exclude the products of child labor from interstate commerce, and approved the creation of a Federal Trade Commission to watch business practices for the purpose of eliminating "unfair competition."

No leading Republican protested against the deepening of the "twilight zone" during the Twenties, when Supreme Court decisions invalidated the Keating-Owen Bill as an unwarranted extension of the commerce power, and annulled the Arizona Minimum Wage law as a violation of freedom of contract. The Democrats fought Republican measures to subsidize the merchant marine, and even filibustered a House measure to extinction in the Senate in 1923. Although the Republicans were willing to have the nation intervene in economic relations by enacting protective tariffs, and granting subsidies to shipping and the nascent aviation industry, President Coolidge vetoed bills to subsidize producers of agricultural staples.

During the next decade, the Democratic party, with notable exceptions among members from the Solid South, discovered a new regard for national authority, while the Republicans showed a new respect for states' rights. By 1936, when Supreme Court decisions declared the New York State Minimum Wage Law and the National Industrial Recovery Act unconstitutional, thus placing large sectors of economic life beyond any regulation, party leaders moved to new ground. Democratic President Franklin D. Roosevelt continued to advocate that a national government, with the power of the Hamiltonian con-

cept, use its authority for what he esteemed Jeffersonian purposes. Republican Herbert Hoover took up a states' rights position in the interest of protecting what he esteemed individual liberty. By 1946, Senator Taft, in an address following the announcement that he sought the Republican presidential nomination, declared that the nation's principal task was making certain that the federal government did not increase its power.

Welfare Legislation

Laws to protect the weaker elements in society against the hazards of child labor, accident, dependent old age, and slum housing had their origin in the states in the early 1900's, and were promoted and supported by the "progressive movement," which did not regard party lines. The Progressives of 1912 were the first, apart from Labor, Populist and Socialist groups, to include a program of such legislation in a national party platform. Wilson's Administration made the earliest attempt to check child labor by use of the federal commerce and taxing powers. Both its laws were invalidated by the Supreme Court, and the resolution amending the Constitution to give the federal government the necessary powers, which was adopted by a Republican Congress in 1924, failed of ratification.

Under the Republican ascendancy in the Twenties, no significant federal welfare legislation was adopted beyond the extension of workmen's compensation to harbor and longshore workers in 1927. President Hoover did call conferences which published notable reports on child welfare and the costs of medical care, but he considered the duty of the government done when it made available the facts needed for private action or state legislation.

Not until 1937 did there appear anything approaching a program of federal welfare legislation, although a full outline of such a plan had been presented in Theodore Roosevelt's Progressive platform of 1912. The Social Security Act of 1937 and its 1939 amendments set up a system of old age and survivors' insurance, provided financial support for approved state unemployment insurance programs, and made

federal contributions toward state plans for the care of the needy aged and blind, dependent and crippled children, and maternal and child health. The Fair Labor Standards Act of 1938 used federal powers over interstate commerce to regulate child labor and minimum wages, and this time the Supreme Court did not find the law unconstitutional.

Although most Republican leaders deny any intent to revoke existing welfare legislation, their stress on economy means it will be held to a minimum. The Republican Congress of 1946 did not act on President Truman's proposal that minimums under the FLSA be raised from 40 to 60 cents an hour; it did not increase coverage under the Social Security law, and it refused to consolidate federal housing activities under a single agency. Low-cost housing projects had been sketched in the laws of 1934 and 1937, which set up the Federal Housing Administration and the United States Housing Authority. Provision for aid to medical research and planning and grants to free state hospitals, as embodied in the Democratic Wagner-Murray-Dingell Bill, have not been accepted by a Republican Congress. The Wagner-Ellender-Taft Bill for federal aid to housing has also been blocked, although its sponsorship crosses party lines. Concern over the current plight of our public schools has increased the demand for federal aid, but objection to cost and fear of federal control prevented legislation.

Agriculture

As a factor in national politics, the embattled farmer had lost ground by 1900. Republican victory in 1896 halted his drive for cheap money through the free coinage of silver. The farmer's need for easier credit, which had impelled him toward inflationary proposals, was ignored by both parties. Under Wilson, the Democrats finally gave some help. The Federal Reserve Act of 1913 made six months farm paper eligible for re-discount, and the Federal Farm Loan Act of 1916 made it possible for farmers to get long term mortgage credit at 6 percent through the Federal Farm Loan Bank System instead of paying 10 percent for three to five year credit.

During the Republican regime in the Twenties, the Intermediate Credit Act of 1923 authorized the Federal Farm Loan Board to charter twelve new institutions to provide credit for six months to three years; the intermediate credit banks were also to re-discount agricultural paper and lend money directly to farm cooperatives on staples pledged as collateral. The farmer's need for credit had been met, but that was no longer his major problem. By the Twenties the farmer's position was worse than it had been before World War I; for his taxes and costs had risen while prices had dropped and the value of his land had declined. The insurgent Republicans of the farm bloc sponsored the equalization fee and export debenture plans to meet the situation. Both attempted to hold American agricultural staples at a price above that prevailing in world markets. President Coolidge vetoed the McNary-Haugen equalization fee bill in 1927 and 1928; and the export debenture plan failed in 1929. The Agricultural Marketing Act of 1929, which President Hoover endorsed, rejected price-fixing and subsidy in principle; but when Hoover's Federal Farm Board entered the commodity market through its Grain and Cotton Stabilization Corporations and pegged prices, the result appeared much the same as if the Administration had approved of subsidies.

The Democrats undertook to reduce mounting surpluses by helping farmers bear the cost of cutting staple plantings. From the voluntary system of 1933, they passed to cotton and tobacco production quotas in 1934. The Supreme Court found the Agricultural Adjustment Act of 1933 unconstitutional in 1936. Congress nevertheless provided grants to all farmers who promoted soil conservation by cutting staple plantings, and in 1938 undertook to give the farmer "parity income"; that is, to restore the 1909-14 ratio of farm revenues to other incomes in the economy. Acreage and marketing quotas, crop insurance, commodity loans were introduced.

When World War II began, agriculture had become a special interest, subsidized and regulated by the government. The need for greater production was met by the price incentive and by Congressional

guarantees of 110 percent of parity prices for two years after the war. Price controls were not applied to farm products as early as to manufactured goods and critical raw materials. Agricultural commodities rose rapidly, and since the ending of controls in 1946, grain and livestock have passed their 1920 highs. No leading spokesman of either party has suggested repealing the wartime laws guaranteeing parity payments, nor has any leading Republican declared in favor of ending the New Deal program for maintaining farm prices.

Organized Labor

In 1890, Congress adopted the Sherman Anti-Trust Act to check combinations in restraint of trade. The law was intended to apply to monopolistic concentrations of industry, but its broad phrasing allowed the Supreme Court to issue injunctions against labor organizations on the ground that they might be regarded as a conspiracy to restrain trade. When the Wilson Administration proceeded to attempt to revise the Sherman Act in 1914, labor pressure secured the incorporation of sections 6 and 20 into the Clayton Anti-Trust Act. Section 6 declared that the labor of a human being was not an article of commerce and that labor organizations were not to be construed as combinations in restraint of trade. Section 20 prohibited the use of the injunction unless it was deemed necessary to prevent irreparable damage to property, and prescribed jury trials in contempt cases unless the contempts were committed in the presence of the court.

By 1921, Supreme Court decisions established the fact that labor had won no immunities under the Clayton Act. Indeed, since injunction proceedings might be brought in the federal courts by individuals as well as the Department of Justice, labor had actually lost by its "Magna Charta." Abuse of the writ of injunction resulted in the Norris-LaGuardia Act of 1932, sponsored by insurgent Republicans and signed by President Hoover. The law forbade federal courts to issue any injunction against peaceable assembly, joining trade unions, ceasing work, making public the existence of a dispute, or paying

out strike benefits. It required that injunctions be issued only after the hearing of testimony in open court, and to a complainant who appeared with clean hands. It provided jury trial in contempt cases, outlawed the "yellow dog" contract, and declared that union members were not to be held liable for damages caused by other union members.

The Norris-LaGuardia Act freed labor from certain disabilities, but it gave unions no positive protection. In 1933, however, section 7a of the National Industrial Recovery Act guaranteed labor the right to organize and to be represented by unions of its own choosing (section 7b guaranteed the converse). After the Supreme Court invalidated the NIRA, Congress passed the National Labor Relations Act of 1935. The Wagner law not only guaranteed the right to organize, but defined and forbade unfair labor practices by employers, and established a National Labor Relations Board to administer the law. An amendment to the Railway Labor Act gave a similar status to railroad labor unions.

The NLRB proceeded informally, but its methods won Supreme Court approval in crucial cases during 1937. Labor organizations increased in membership and status. During World War II, War Labor Board decisions tended to support union organization, particularly through maintenance-of-membership contracts. By 1947, the political climate had changed, and a Republican Congress, with support from Southern Democrats, passed the Taft-Hartley Act over President Truman's veto. The complicated provisions of this new law attempt to protect the individual union member in his right to present his own grievances, or to continue work, without loss of union membership, in spite of his organization's decision to strike. Certain union practices are declared unfair; secondary boycotts, jurisdictional and sympathetic strikes are outlawed. Unions are made responsible for damages in the event of contract violation, nor may they plead lack of ratification by an authorized agent. In addition, the new law separates the United States Conciliation Service from the Department of Labor, and establishes an elaborate system of injunction, delay,

inquiry, and reporting should an industry-wide strike threaten public health or safety.

Republicans declare the Taft-Hartley law a necessary restoration of balance between organized labor and its employers. Many Democrats assert that the animus of the bill is against effective organization for collective bargaining.

Public Finance and Banking

The panic of 1907 made clear the weakness of the nation's banking system as organized under the National Banking Act of 1863. The reserves set up were fictitious in character, and too widely scattered to be useful in time of crisis. This old Civil War law provided an inelastic currency based on the level of the public debt instead of the needs of business. Reforms were necessary. In 1908, Republican legislation provided for temporary banknote issues, and for a National Monetary Commission to investigate European systems of banking and currency.

When the Wilson Administration took office in 1913, the Commission had made its report, but no action was taken on Republican Senator Aldrich's bill altering the American banking system. Instead, a new bill was written. Party cleavages came on the issues of government control and decentralization. The new Glass-Owen measure stressed decentralization and participation of the government. It was enacted by Democratic votes. The Federal Reserve Act of 1913 established a system of twelve regional banks owned by their member banks and governed by six directors chosen by those members, and three appointed by the Federal Reserve Board. This was to have two *ex officio* members and five appointed by the President. The reserve banks were to re-discount eligible commercial and agricultural paper for their members. With that as backing, plus a 40 percent gold reserve, the reserve banks might issue currency.

Although the Federal Reserve System furnished a sound and sufficient currency, serious inadequacies appeared by the end of the Twenties. The misuse of bank credit to finance stock market activities, and the improper ties between banks and

their securities affiliates, helped to bring about the failure of more than 6,000 banks after the 1929 crisis.

In 1933, a Democratic Congress passed legislation to repair the weaknesses of the 1913 law. Through a Federal Deposit Insurance Corporation, all accounts were assured up to \$5,000, and all banks wishing to share in the plan were required to join the Federal Reserve System and submit to its restraints. Member banks were required to divorce their securities affiliates, and private bankers to choose between investment and deposit business. The Banking Act of 1935 changed the name of the Federal Reserve Board to the Board of Governors of the Federal Reserve System, increased its membership, lengthened their terms of service, and provided that all members be appointed by the President. The new body was given power to control the expansion of bank credit, to increase reserve requirements and to engage in open market operations in government securities.

During the Roosevelt Administration, the Board of Governors followed an easy money policy until 1936 and 1937, when reserve requirements were raised to the legal limit. After 1939 the Board returned to an easy money policy to facilitate war financing. Reserve requirements and re-discount rates have been raised since the war, but whether the Board will make a systematic and thorough-going effort to check inflationary price increases through credit curbs remains a question.

While the Democratic party finally overhauled the nation's banking system, the basic change in fiscal policy came as the result of Republican parliamentary maneuvers. To prevent an income tax rider to the 1909 tariff, a Republican Congress submitted the Sixteenth Amendment to the states. By February, 1913, three-fourths of the states had ratified, and the Federal government received power to tax incomes without apportionment among the states. Moderate normal and surtax rates were levied in 1913. Then the decline of customs receipts after the outbreak of World War I made the new source of revenue particularly necessary. During the war, rates increased sharply, an excess profits tax was imposed and new excises introduced. War-

time rates were lowered during the Twenties in spite of Democratic protests that Treasury Secretary Mellon's program favored those best able to pay. The federal debt was cut about a third during the decade, and the budget balanced.

During the Thirties, rates were raised, especially on incomes above \$20,000; the public debt increased; and efforts at balancing the budget were given over. The needs of World War II caused further tax rises, greater deficits, and a mounting public debt. Currently, party controversy rages about the issue of simultaneous budget balancing, tax reduction, and maintenance of the United States in its position of world primacy.

The Eightieth Congress repealed wartime excess profits taxes and cut corporation levies, but retained most of the wartime excises. Republican Representative Knutson proposed a 20 percent tax cut for all incomes. Protest against this apparent favoring of the upper income groups brought a modification to allow a larger reduction to the lower brackets. President Truman vetoed the tax reduction bill in July, 1947, and Congress upheld him by a narrow margin to which Republican votes contributed. Speaking generally, the Republican party seeks to reduce taxes on the upper income levels in order to encourage venture capital and investment, while the Democrats consider immediate tax cuts inflationary and unwise in view of the current world situation and its demands on American funds. Such proposals as those for eliminating double taxation on income from corporate dividends, limiting the percentage of income that may be taken by taxation, and revising the entire tax structure to avoid duplication among state, federal and local levies have not yet become party issues.

Public Improvements and Conservation

Until Theodore Roosevelt turned his energies to conservation, no President but Cleveland had made a real effort to preserve natural resources on the public domain from wasteful exploitation. Between 1906 and 1909, Roosevelt withdrew from entry millions of acres of forest, coal and phosphate land, and many waterpower

sites, sometimes with dubious legal authority; but his main contribution to conservation was the public interest he aroused in the issue. President Taft continued the work, securing legal authority for the separation of subsurface from surface titles and the withdrawal of waterpower sites from entry.

During the Wilson Administration, extensive oil reserves were set aside for the Navy at Elk Hills in California and Teapot Dome in Wyoming. Administration of these reserves was transferred from the Navy to the Department of the Interior by President Harding. Investigation by a Senate Committee under Senator Walsh of Montana revealed widespread fraud in the subsequent oil leases to private companies, yet the scandal was all but ignored by the press and skillfully belittled by President Coolidge. The government recovered the oil reserves in 1927 as a result of a Supreme Court decision.

During the 1920's, general interest in the preservation of forest and waterpower resources diminished. In 1928, after years of effort by Senator Norris, Nebraska's insurgent Republican, Congress adopted a joint resolution calling for completion of the Muscle Shoals power units and the organization of a government corporation to manufacture fertilizer and sell surplus power. President Coolidge killed the plan with a pocket veto, and President Hoover denounced it in a veto message when it passed a second time in 1931.

In 1933, a Democratic Congress created the Tennessee Valley Authority to develop hydroelectric power on the Tennessee River, work out methods of flood control, and plan interstate development of the valley as a unit. The TVA program was opposed by local politicians and by the power companies for whose rates its power cost might serve as "yardstick." The Supreme Court found TVA activities constitutional in 1937, and it survived both internecine quarrels among its officers and senatorial attack.

Concern for natural resources appears in two main fields in 1947: the preservation of farmland from flood, particularly since the recent Missouri Valley floods, and conservation of mineral resources. Democratic Senator Murray of Montana has pro-

posed and President Truman approved a Missouri Valley Authority on the model of the TVA; but a Republican Congress has preferred the Pick-Sloan Plan, enlisting by the Army and Bureau of Reclamation, for building reservoirs and levees along the upper Missouri. Like MVA, the St. Lawrence seaway project remains unfinished business. Republican Senator Vandenberg offered a joint resolution for congressional approval of the 1941 Executive Agreement with Canada for completing the seaway and making it self-sustaining, but no action has been taken.

World War II demands on mineral resources have aroused new concern for the natural wealth of the United States. In March, 1947, Secretary of the Interior Krug reported that the nation was exhausting its lead, zinc, and high-grade iron ore, while pumped oil and copper will last only 25 years at present rates of use.

Tariff

In 1900, Republicans adhered to the Hamiltonian doctrine of protection while most Democrats wished to have tariffs reduced. Sectional interests nevertheless cut across party dogma; insurgent Republicans found high tariffs contrary to the farmer's interest; Eastern Democrats supported protection. By 1908, the demand for tariff reform was being pressed as part of the attack against monopoly, and the Republicans pledged revision of the Dingley Act of 1897 on the principle of equalizing foreign and American costs of production. The bill finally adopted at the special session of 1909 maintained the high level of rates, and continued the wool and sugar duties which had been under heaviest attack. While President Taft praised the bill and Roosevelt continued to avoid the tariff controversy in the 1912 campaign, Wilson pledged lower tariffs and carried that pledge through in 1913. His Underwood Act lowered the general level of duties more than 10 percent, added wool and sugar to a greatly lengthened free list, and imposed only *ad valorem* duties instead of the devious specific rates common in previous laws.

World War I proved as effective as Republican tariffs in cutting off imports. When the Republicans succeeded to power

after the war, they proceeded to enact temporary protective legislation in 1921 and the Fordney-McCumber Act of 1922. The new high level of duties in this law, which protected agricultural commodities as well as industrial products, was increased by the Smoot-Hawley Act. This passed in June, 1930, after a bitter struggle between the House and the insurgent Republicans in the Senate. The Coolidge and Hoover Administrations undertook no broader use of the flexibility provisions of the 1922 law which had authorized a Tariff Commission to investigate comparative production costs and advise the President to raise or lower rates within a 50 percent limit. On the contrary, the Commission was filled with high-protectionist members.

European countries had taken sharp retaliatory measures after the enactment of the Smoot-Hawley Bill. Following the collapse of 1929-30, exchange controls and import quotas imposed further obstacles to world trade. Not until Secretary of State Cordell Hull initiated his Trade Agreements plan in 1934 did either party attempt to meet the dilemma in which the United States stood. It was the dilemma of a nation committed to high tariffs, anxious to collect the huge debts owed by Europe, and no longer willing to compensate for its reluctance to buy goods by making fresh loans abroad, as had been the rule in the 1920's. Hull returned to the Wilsonian doctrine of low duties. For a 3-year period, Congress empowered the President to make tariff concessions to nations which would give matching reductions to American goods. Before September, 1939, seventeen agreements had been concluded, principally with Latin-American countries producing non-competitive goods. Great Britain and Canada, however, were included. By successive renewals, Congress has extended the Trade Agreements Act until 1948.

The Hull trade program attacked not only tariff barriers but also the currency restrictions and exchange controls that became instruments of national economic policy during the 1930's. With the end of World War II, when nearly all international commerce was controlled by governments in patterns of economic warfare, American spokesmen renewed the effort to restore a freer flow of goods and capital. During the

negotiations for the British loan in 1945-46, the United States drafted its proposals for a United Nations International Trade Organization. At the preliminary conference which met in London in October, 1946, Assistant Secretary of State William L. Clayton set forth as the aim of American policy the restoration of multilateral trade through tariff reductions, and the elimination of import quota preferences, embargoes and exchange restrictions. The following April, a full conference assembled at Geneva to consider the London draft of a charter for the I. T. O. By August, 1947, the delegates had accepted a charter to be submitted to a world conference at Havana in November, 1947. The charter embodies points stressed by the American delegation: equal access to markets, protection of investment opportunities and checks on restrictive practices.

Although the United States won endorsement of its principles of international trade from the leading commercial countries, and although sectors of the normally Republican business community are cooling in their enthusiasm for the extremes of protection, Representative Knutson and Senator Butler of Nebraska threatened in 1947 to defeat a renewal of the Trade Agreements Act in 1948. Senator Hawkes of New Jersey simultaneously declared that the United States would be unwise to accept the I. T. O. Charter.

The Military and the Veterans

The Spanish-American War showed that the United States had an efficient navy, but an army without any real service of supply, any staff command, or any machinery for training higher officers. It had no regular forces able to meet a trained European army. President McKinley in 1899 replaced an inefficient Secretary of War with Elihu Root, who began a much-needed housecleaning. The Roosevelt Administration continued Root's administrative reforms; established a General Staff in 1903, set up an Army War College in 1907, and took measures toward integrating the National Guard and the Army. Naval expansion received even more attention; expenditures rose from \$55.9 million in 1900 to \$139.6 million in 1914.

By the opening of World War I, the

United States Navy was inferior only to Britain's. It functioned effectively during the conflict, but the Army underwent the greatest innovations. From the beginning the Army was recruited by conscription; "political generals" who were a plague in the Civil War played a minor role, airplanes, motorized equipment, and automatic weapons assuming new importance.

In February, 1917, Secretary of War Baker proposed that all able-bodied 19-year-olds receive 11 months of military training followed by two-week refresher periods during the next two years. Republican proposals for shorter training were voted down. The 1920 defense law merely provided a skeleton organization in the event of mobilization. While the army was maintained on a narrow volunteer basis, the Washington Conference of 1921-22 and the London Conference of 1930 attempted to restrict naval building. The capital ship holiday of the 1920's ended in 1936 as Germany and Italy increased their navies and the other powers invoked the "escalator" clause allowing them to exceed treaty limitations. The United States entered the race in 1937 and finally declared for a navy as strong as the strongest naval power both in the Atlantic and the Pacific. Both parties supported appropriations for naval building and airplane construction. Peacetime conscription was enacted in September, 1940, after long debate, and the Selective Service Act was extended in August, 1941, although the proposal carried the House by a vote of only 203-202.

Experience in World War II made evident the need for unified command. In 1947-48 the state of the postwar world raised new concern for national security. A Republican Congress finally adopted compromise legislation for unifying the armed forces under a single civilian Secretary of National Defense with undersecretaries for Navy, Army and Air. In January, 1947, President Truman recommended that Congress establish a system of compulsory military training. His special Advisory Committee of civilian educators, ministers and administrators, appointed in December, 1946, reported in May, 1947, approving a six months training program for physically fit young men to be followed by a six

months period of optional training. The President was supported by such Republicans as Representative Wadsworth and ex-Supreme Court Justice Owen D. Roberts, but the party steering committee allowed Congress to adjourn without acting.

Closely related to the issues of the military establishment is the problem of the "veteran interest." During World War I Congress had proposed to check pension demands by providing care for the disabled, and war risk insurance on easy terms. Disability compensation was liberalized in 1921 and extended in 1924 and 1930. In 1924, Congress passed over President Coolidge's veto a bill granting veterans interest-bearing "adjusted-compensation certificates" redeemable in 20 years. The depression brought demands for immediate cashing of the bonus certificates, or for an increase in their loan value. Congress carried the latter proposal over President Hoover's veto in 1931. The demand for immediate cash payment produced the "Bonus Expeditionary Force" of 1932, and its forcible expulsion from the capital helped defeat Hoover in November. President Roosevelt vetoed a measure to pay the bonus in Treasury notes in 1935. In January, 1936, over another presidential veto, Congress made the bonus payable in non-transferable interest-bearing bonds which might be redeemed in cash.

Besides applying the war risk insurance and veterans' benefit system of World War I to World War II draftees, Congress passed the "G. I. Bill of Rights" in 1944 and liberalized its provisions in 1945 and 1946. The law provided a year's unemployment compensation, or subsistence allowances and tuition for education interrupted by army service, or government guarantee of 50 percent of a \$4,000 loan for home building or business activity. In addition, enlisted men were given redeemable bonds for furlough time earned but not used.

Between 1918 and 1930, care of and payments to World War I veterans cost about five and a half billion dollars. A larger army was mobilized during World War II and the veterans of World War I will soon be of age, making them proper subjects for pensioning. Few in either party question the validity of the expenditure as a whole,

but a great many may question its compatibility with government economy, balanced budgets and lower taxes.

Proposals for Change

In 1900, most proposals to alter the structure of the federal government were calculated to make it more responsive to the public will. Direct popular election of Senators would free the upper chamber from boss rule, and allow Senators to represent the people rather than the corporate interests of their states. The proposal received the approval of a Republican Congress in May, 1913, and was ratified as the XVII Amendment in 1913.

Few notable proposals for basic change in governmental organization were offered during the 1920's. In 1927, when it appeared that President Coolidge might win renomination, Republican Representative Beck offered an amendment limiting a President to two terms, and Senator LaFollette supported the measure in the Senate, which adopted the resolution in 1928. In 1940 and again in 1944, the Republican platform endorsed the limitation.

The idea that a President, by continuance in office, may become a dictator, has been countered by the idea that the Supreme Court, through judicial review, may transform the Constitution into the charter of an oligarchy. The Court's use of its power was attacked by Bryan in 1908 and by Theodore Roosevelt in his Progressive phase. After the Court invalidated the New Deal program in 1935-36, the Roosevelt Administration presented its court reorganization proposals: these did not attempt to limit judicial review, but empowered the President to appoint up to six additional members to supplement those judges who did not choose to retire at 70. Opposition crossed party lines and Democrats joined Republicans to defeat the bill.

The Court's personnel rapidly changed, however, and the majority view became favorable to New Deal legislation.

While suggestions for the direct election of the President and the abolition of the electoral college are often heard, neither party chooses to forego its sectional advantages to promote majority rule. It was by Democratic support for a proposal of

Senator Norris, however, that the "lame duck" short session was abolished by the XX Amendment in 1933.

To make the federal government function more efficiently, Congress provided for a national budget system in 1921. A Democratic Congress rescinded President Hoover's authority to reorganize the executive department in 1933. Congress denied President Roosevelt similar powers in 1936, but yielded in 1939 and gave the President authority to regroup minor government bureaus and agencies, provided that Congress did not reverse his decision within 60 days. The organization and procedure of Congress itself has long been criticized as unwieldy. After much revision of the original Democratic proposals, Congress adopted the Reorganization Act of 1946.

The new law attempts to ease the legislator's burden by banning private bills, giving Congress the service of a special Legislative Reference division in the Library of Congress, and eliminating duplication by cutting standing committees from 80 to 34, each provided with professional staff assistants. Congressional salaries have been increased and retirement annuities provided on a contribution basis for legislators who have served six years and reached the age of 62.

The Republican Congress operating under the Act has not tried to enforce its provision for the registration of lobbyists and has evaded the reduction in the number of standing committees by multiplying the number of permanent sub-committees. Neither law nor party has tried to meet the chief problem of the committee system, promotion to keep posts by seniority.

Prohibition

The attempt to promote temperance by laws to prohibit the manufacture or sale of intoxicating liquors won a notable victory in federal legislation in 1913, when Congress enacted over President Taft's veto a measure barring the shipment of liquor into states which had voted themselves dry. In 1914, 11 states required that protection. By 1918, war demands for saving grain and the skilled work of the Anti-Saloon League, one of the great masters in the techniques of political pressure, had made 18 more

states dry. In 1917, Congress submitted the XVIII Amendment for ratification. It was accepted in January, 1919.

Opposition to prohibition crossed party lines, for states' rights Southern Democrats supported it as well as Republicans from the Midwest. Nevertheless, the Democrats were first to make repeal a party issue. Their 1932 platform urged repeal of the XVIII Amendment and the return of the liquor traffic to state regulation. In February, 1933, a Democratic Congress sent the XXI Amendment to the states; that December it was ratified. By 1937-38, only 6 states remained dry; 15 made the sale of liquor a public monopoly, and 26 provided for central licensing to regulate the liquor trade and check the evils of the saloon.

Prohibition returned to the national scene during the war. In August, 1942, Democratic Senator Josh Lee of Oklahoma attempted to prohibit the sale of alcoholic beverages within "a reasonable distance" of army posts and mobilization places. His proposal was killed, but 17 Democrats and 7 Republicans voted in its favor. In 1944, Democratic Representative Bryson of South Carolina found strong House backing for his proposal to limit alcoholic beverages to half of 1 percent for the duration. By 1946, the prohibitionist lobby won support from Representative Rankin of Mississippi in its efforts to restrict liquor advertising. Bryson, in 1947, was looking for new grounds on which to offer federal prohibition legislation, and 978 of the nation's 3,070 counties had voted to forbid the sale of whisky within their limits.

Immigration

By 1900, many Americans regarded immigration as a problem instead of an asset, a view confirmed when Congress appointed an Immigration Commission in 1907. The report which the Commission rendered in 1911 declared that while the "new immigration" from Italy, the Balkans, and Russia did not constitute "human scum," as charged, it was too numerous, and was less assimilable than the northern European immigration which had preceded. Twice President Wilson vetoed the literacy test by which Congress attempted to exercise a selective test on immigration, but 1

February, 1917, Congress overrode his veto.

After World War I, fear of a flood of immigrants supplemented selective with numerical checks and produced the quota system. The law of 1921 was replaced by permanent legislation in 1924, setting quotas at 2 percent of the nationals of a given country residing in the United States in 1890 as a means of encouraging immigrants from northern Europe. The need for unskilled labor became evident during World War II, and was met by the use of Western Hemisphere workers. Partly as an outgrowth of that fact, the current "immigration problem" involves not Europeans but Puerto Ricans, Americans by law, yet foreign-speaking and herded into slums recalling the worst of the early 1900's. The persecutions of the 1930's and the problem of Europe's displaced persons since then

have reawakened the idea that the United States should be an asylum for the oppressed. In December, 1945, President Truman asked that immigration of displaced persons under the quota system be facilitated. Representative Stratton's bill goes further, proposing that the unfilled quotas of the war years and the 1930's be used to permit the immigration of 400,000 Europeans during the next four years. The measure has won support from labor, religious groups, and certain Democrats. Nevertheless, the Republican Congress of 1946-47 gave the bill no attention, although public hearings were held. During these hearings, the attitude of Southern Democrats indicated that nativist prejudices would not respect party divisions if a temporary lowering of immigration bars should become a minor issue in the 1948 campaign.

POLITICAL MACHINES

by CHARLES VAN DEVANDER

Chief, Washington Bureau, N. Y. Post

THERE PROBABLY IS LESS UNDERSTANDING—and more deliberately misdirected thinking—about political "machines" than about any other phase of politics in the United States of 1948. The resultant confusion has given rise to this paradox: some of the most effective political "machines" in the U. S. today operate without much public notice, while heated argument still swirls around the heads of "bosses" who in some cases are so politically anemic that they must be propped up skillfully to serve even as campaign issues for the opposition. The following definitions may help to clear the air:

1. *Organization*—This is a generic term for the party committee, set up in accordance with law or under the party's rules, in any political subdivision. Political "organizations" include the ward, district, city, county and state committees of both major parties. *They are not set up primarily to win elections. The essential purpose of any "organization" is to enable the most active party workers and contributors to direct party affairs and to influence and, if possible, to dictate the selection of party candidates for public office.*

(It should be noted that the Democratic and Republican National Committees, as such, are at present too loosely constituted and composed of too many factions to carry out this purpose. They are really party assemblies charged with certain administrative functions, as distinguished from the operating "organizations" in the states and local communities.)

2. *Leader*—Political organizations are like all other organizations in that each usually has one man (or occasionally two or three men) who makes the important decision. Such an individual is properly called the party "leader" in the political subdivision in which he operates.

3. *Machine*—This is an invidious term which means "successful organization." It may be applied to any political organization which is strong enough to control party primaries and conventions in its territory. "Machines" exist in minority, as well as in majority parties. In practice, wherever the majority party in any community has been controlled by a strong "machine," it usually has cooperated in maintaining an effective (and acquiescent) "machine" to run the minority party.

4. **Boss**—This designation is commonly applied to the head man in a political machine. It is important to note that a minority party (such as the Republican party in Alabama or the Democratic party in Philadelphia) can have an absolute "boss." A major source of confusion is to be found in the fact that the same term is applied, with a special significance, to the head of a machine within a majority party, since he is supposed to exercise control over the election, as well as the nomination, of public officials. The reality of such control over elections usually is questionable, however, as will be noted below.

In the light of these definitions, an important fact about the role of political machines in the United States today springs into sudden clarity. It is that machine control and "boss rule" exist widely within both political parties, while genuine "boss rule" of governmental units, in the traditional pattern, is comparatively rare. To state it differently: there are scores of political bosses, many of them unknown to the public, who still can control party primaries or conventions in their communities, but there is only a handful left who can claim to control elections.

The decade of the Thirties, which saw fundamental problems of government raised by the depression and great issues dramatized by President Roosevelt, brought a tremendous increase of interest in political issues and of participation in elections. But for the most part, even in 1948, voters still confine their interest to the actual election campaigns. By the time the campaigns start, however, the party nominees have been picked and the principal function of the machines has been fulfilled. Moreover, public interest still centers largely on the selection of Presidents, Governors, Senators and Mayors, while the political bosses are much more intimately concerned about the candidates for sheriff, for judgeships, and for Congress and the state legislatures, who frequently slip in without even their names being known to a majority of the voters.

Franklin Roosevelt's nomination for President in 1932 was bitterly but vainly opposed by Tammany Hall and the other major Democratic machines (all of which

supported Al Smith), but Roosevelt's election that November carried into office thousands of machine-made city and county officials. In subsequent years the Democratic machine bosses led the third and fourth term "drafts" and provided the shock troops to nominate Roosevelt's candidates for Vice President; not because they thought it essential that F.D.R. remain in the White House, but because they had concluded that their local candidates would have a better chance of success with Roosevelt's name leading the ticket.

In 1948 the voters will again be confronted in November with a choice of local, state and federal candidates largely picked by the leaders of political organizations (or by the bosses of political machines—the difference is one of degree, so you can take your choice of terms).

President Truman will pick his candidate for Vice President, and the leaders of the Democratic state organizations and city machines will see that he is nominated.

In the Republican party a knock-down and drag-out fight over the presidential nomination is in prospect. Carroll Reece, the National Chairman, will go to the Philadelphia convention with Tennessee's 22 votes in his pocket to cast for Senator Robert A. Taft and, if Taft is eliminated as a candidate, to manipulate thereafter as he sees fit. B. L. Noojin, Republican National Committeeman from Democratic Alabama, will have 14 Taft delegates to toss around on the same basis. The Republican State organization (or machine) in New York will see to it that only Dewey delegates go to Philadelphia to cast the Empire State's 97 votes, although many New York Republicans may prefer the nomination of Taft, or of Harold E. Stassen or General Dwight Eisenhower.

In a few states—notably in Wisconsin, Nebraska and Oregon—enrolled Republican voters will have the opportunity to vote in state-wide primaries on whom they prefer as a presidential candidate. But in most of the other states no more than two or three men, in the final analysis, will determine for whom the state's votes will be cast in the National Convention.

There remain for consideration the familiar "big-city" machines. Most of them

are Democratic, and collectively they provide an issue which is probably worth more votes to the Republican national candidates on Election Day than the machines can "deliver" to the nominees.

Structurally the machines still exist in much the same form as in the days of "Boss" Tweed, Charles F. Murphy and (to cite a Republican example) Boies Penrose. The system of doorbell-pushers, precinct and district (or ward) leaders, all leading up to the city boss, is unchanged. These highly integrated organizations still control the party machinery in most of the nation's principal cities, but in only a few cases (Albany, N. Y., Jersey City, N. J., and Memphis, Tenn., are the principal examples) can they reasonably be said to dominate the city governments.

The case of New York City's "Tammany Hall" (which actually consists of five county organizations) is typical. The New York machines have never lost control of the Democratic party in the nation's metropolis, but since 1933 have never commanded a majority of the votes on Election Day. They were powerless to prevent the election of Fiorello LaGuardia as Mayor for three successive terms, and they always constituted more of a liability than an asset to President Roosevelt at the polls.

Out of a maximum New York City vote of 3,500,000, *less than half can be controlled by the machines of all four recognized parties now operating in the nation's metropolis.* The rest of the New York vote is highly independent.

In Albany, N. Y., it's the O'Connell machine. Daniel P. ("Uncle Dan") O'Connell, last of four brothers who took over the Democratic County organization between 1919 and 1921, has been the sole boss since 1939. The Albany machine has been subjected to more concentrated and sustained attack than any political organization in the country, with the possible exception of Tammany Hall. In the mid-Twenties, federal prosecution broke up the Albany Baseball Pool, an O'Connell numbers game which had spread profitably over all of the New England and Middle Atlantic states. "Uncle Dan," the present boss, served thirty days for contempt of court rather than answer a U. S. Attorney's questions

about the enterprise. Since then the O'Connell ghost voters, the O'Connell system of rewards and penalties through tax assessments, and the O'Connell monopoly of draft beer in Albany (the family owns the local brewery) have provided campaign fodder for Republican candidates from Albert Ottinger (who nearly knocked off F.D.R. in the 1928 governorship election) to Thomas E. Dewey. But the O'Connell machine has survived and, in local elections at least, is as strong as ever, despite the fact that Dewey, the demon prosecutor, is ensconced in the Capitol a few blocks away.

In Chicago, with the retirement of Mayor Edward J. Kelly in 1947, Jacob Arvey became head of what had been known for fourteen years as the "Kelly-Nash" Democratic machine. Arvey, senior partner of one of the city's leading law firms, combines civic-mindedness with shrewd ability in practical politics. It was chiefly Arvey who persuaded Kelly not to risk an uncertain campaign for re-election and who brought about the nomination of civic-minded businessman Martin H. Kennelly as his successor, a choice resoundingly approved by the Chicago voters.

Below the top level the Chicago machine is substantially unchanged from its Kelly-Nash days, although Arvey is moving gradually to infuse some new blood into the ward organizations.

In Philadelphia, a Republican machine has run things since Civil War days. This organization, of which Matthew S. Quay, Boies Penrose and William S. Vare have been the most notable leaders, was strong enough to survive (in local elections) even the overpowering appeal which Franklin D. Roosevelt exercised over the urban voters of the nation. Philadelphia went Democratic in the 1936, 1940 and 1944 presidential elections; but the pattern and tradition of voting Republican in city elections (held in non-presidential years) was never broken; and throughout the Roosevelt era the Republican machine retained control of most of the city, county and judicial patronage.

Republican machine rule in Philadelphia, like Tammany rule in New York, lives on patronage, Christmas baskets, ticket-fixing and control of the courts and the police,

with all that implies in terms of tolerance of gambling and controlled vice.

In recent years the Philadelphia machine has been run by a triumvirate, the ablest of whose members was the late Charles L. Brown, President Justice of the Municipal Court—a job which controls \$1,000,000 a year in patronage. Since Judge Brown's death in the fall of 1947, the balance of power in the leadership has been uncertain. The machine has a financial "angel" in Sun Oil millionaire Joseph N. Pew, Jr.; and a requirement for occupancy of the city chairmanship (presently held by David W. Harris) is ability to tap the Pew bankroll. Pew, however, has little to say on policy or patronage matters.

In Jersey City, Frank ("I-am-the-law") Hague used to be the undisputed political boss of all New Jersey. Now he is only the uneasy boss of Jersey City, and of the Hudson County Democratic machine.

In New Jersey, more than in any other state, the big-city boss must control the state government as a matter of self-preservation, because the Governor appoints the county prosecutors, county judges, the superintendent of elections and the members of the "bi-partisan" county election boards. Hague's power, from 1919 to 1940, was based on the fact that the Governor's office always was occupied by a "Hague Republican" if not by a Hague Democrat. But since 1940 there has been a succession of anti-Hague Governors—Charles Edison (Dem.) and Walter E. Edge and Alfred E. Driscoll (Reps.)—in the Statehouse at Trenton. The result is that, in 1948, Hague controls no state-wide office; none of the state judges is a Hague machine man, and even the key political offices in his own county are filled by anti-Hague appointees. Thus weakened, Hague suffered a body blow from the people of his own county when the voters in Hoboken in 1947 threw out the Hague-affiliated McFeeley city machine and installed an independent Democratic city

administration. Shortly afterward, Hague resigned as Mayor of Jersey City, but thoughtfully turned over the job to his nephew and former secretary, Frank Hague Eggers.

In Memphis, Tenn., Edward H. "Boss" Crump has controlled city and Shelby County elections since about 1905 and state politics during the latter half of that period. He is a benevolent despot, whose long reign can be attributed equally to his judicious use of political terrorism and rewards.

Crump is one of the few genuine city (as well as party) bosses left in the United States. He exercises full power over city, county and state patronage in Shelby County, and also over the payroll of the municipally operated light, gas and water system in Memphis. No state-wide official has been elected since the early Thirties without his support, and his word in local or state Democratic primaries is final.

In Kansas City, Mo., the remnant of the Pendergast machine is run by James M. Pendergast, lawyer and nephew of "Boss Tom" Pendergast. The machine's dues paying members include Harry S. Truman, who began his political career in 1922 as a Jackson County judge.

"Boss Tom" controlled the governments of Kansas City and Jackson County for more than twenty years, and the state of Missouri for a decade, before he was sent to the federal penitentiary in 1939 for income tax evasion. Today the Pendergast machine does not run Kansas City (the city administration is in the hands of an independent Democratic-Republican coalition) and in the state it is recognized only so far as Jackson County matters are concerned. One of its ward leaders is under indictment for tampering with a federal grand jury during a 1947 investigation of election frauds. It does still control the county courthouse patronage.

One of the amazing things in a political campaign is the number of candidates who throw their hats into the ring without removing their heads.

—H.I.P.

There is pretty general agreement that the National Convention is unsuited to the serious work of writing a party platform and choosing candidates. The institution will probably be abolished as soon as we can invent something that is louder and funnier.

—H.B.

Bill or treaty	Party	House vote		Senate vote		Date enacted
		Yea	Nay	Yea	Nay	
Hay-Pauncefote Treaty. England agreed the U.S. can build and control an Isthmian canal open to all nations on equal terms.		No vote required		72	6	Nov. 18, 1901
Newlands Act. Authorized irrigation projects in 16 western states.		146	55	No roll-call vote		June 17, 1902
Spooner Bill. Authorized purchase of New Panama Canal Company's rights.		252	8	67	6	June 28, 1902
Elkins Act. Forbade railroads from deviating from published rates; punished givers and receivers of rebates.		241	6	No record vote		Feb. 19, 1903
Hay-Bunau-Varilla Treaty. Granted the U.S. a ten-mile strip in Panama in perpetuity for \$10,000,000 in gold and an annuity of \$250,000.	Dem. Rep.	No vote required		9 41	15 1	Mar. 19, 1903
Hepburn Rate Bill. Gave the ICC control over express companies and pipe lines; allowed them to reduce rates upon complaint of shipper; outlawed midnight rates; forbade free passes; required uniform book-keeping system.		216	4	71	3	June 29, 1906
Pure Food and Drug Act. Made shipments in interstate commerce of adulterated foods and drugs illegal.		240	17	63	4	June 30, 1906
Payne-Aldrich Tariff. Protective, averaging 36.38 percent; lowered rates on coal, lumber, etc.; free list included wood pulp, oil, etc.		195	183	47	31	Aug. 5, 1909
Immigration Act. Barred paupers, anarchists, criminals, and diseased persons.						Mar. 26, 1910
Mann-Elkins Act. Gave the ICC jurisdiction over telephone and telegraph companies; right to alter railroad rates on their own initiative.		200	126	50	12	June 18, 1910
Admission of New Mexico.		No roll-call vote		53	8	Jan. 6, 1912
Admission of Arizona.		No roll-call vote		53	8	Feb. 14, 1912
16th Amendment. Legalized the income tax.		317	14	77	0	Feb. 25, 1913
Webb-Kenyon Interstate Liquor Shipment Act. Forbade transportation of liquor from wet to dry states.		240	65	No roll-call vote		Vetoed, Feb. 23, 1913
		244	(Reconsideration vote) 95	62	21	Mar. 1, 1913
17th Amendment. Provided for popular election of Senators.		237	39	64	24	May 31, 1913
Underwood-Simmons Tariff. Averaged 26.67 percent with 958 reductions, 86 increases and 307 unchanged items.		254	103	36	17	Oct. 3, 1913
Glass-Owen Bill. Established a Federal Reserve system.		298	60	43	25	Dec. 23, 1913
Federal Trade Commission. Established to enforce anti-trust laws.		No roll-call vote		53	16	Sept. 26, 1914
Clayton Antitrust Act. Prohibited monopolistic price discrimination, restrictive sales or leases, intercorporate stock holding, interlocking directorates of competing companies capitalized at \$1,000,000 or more. Exempted labor from antitrust laws and declared peaceful picketing legal.		244	54	35	24	Oct. 15, 1914
Federal Farm Loan Act. Created system of land banks to lend money to farmers on their land and permanent improvements.		No roll-call vote		58	5	July 17, 1916
Keating-Owen Law. Forbade shipping in interstate commerce of goods produced by children. (Declared unconstitutional in 1918.)		337	46	52	12	Sept. 1, 1916

BIOGRAPHIES OF THE PRESIDENTS

by Professor Arthur Schlesinger, Jr.

Associate Professor of History, Harvard University

Author of the Pulitzer Prize winning "Age of Jackson."

GEORGE WASHINGTON

was born on February 22 (February 11, old style), 1732, in Westmoreland County, Virginia. His early training was as a surveyor; but in 1752 he was appointed adjutant in the Virginia militia, and for the next three years he took an active part in the wars against the French and Indians, serving as General Braddock's aide in the disastrous campaign against Fort Duquesne. In 1759 he resigned from the militia, married Martha Dandridge Custis, a widow, and settled down as a gentleman farmer at Mount Vernon.

As a militiaman, he had been exposed to the arrogance of the British officers, and his experience as a planter with British commercial restrictions increased his anti-British sentiment. He opposed the Stamp Act of 1765 and after 1770 became increasingly prominent in organizing resistance. A delegate to the Continental Congress, Washington was selected as commander in chief of the Continental Army and took command at Cambridge, Massachusetts, on July 3, 1775.

Inadequately supported and sometimes covertly sabotaged by the Congress, in charge of troops who were inexperienced, badly equipped and impatient of discipline, Washington conducted the war on the policy of avoiding major engagements with the British and wearing them down by harassing tactics. His able generalship, along with the French alliance and the growing weariness within Britain, brought the war to a conclusion with the surrender of Cornwallis at Yorktown on October 19, 1781.

The chaotic years under the Articles of Confederation led Washington to return to public life in the hope of promoting the formation of a strong central government. He presided over the Constitutional Convention and yielded to the universal demand that he serve as first President. In office, he sought to unite the nation in the service of establishing the authority of new government at home and abroad. Greatly distressed by the emergence of the Hamilton-Jefferson rivalry, he worked to maintain neutrality but actually sympathized more with Hamilton. Following his unanimous re-election in 1792, his second term was dominated by the Federalists. His Farewell Address rebuked party spirit and warned against foreign entanglements.

He died at Mt. Vernon on December 14, 1799. Tall, dignified and impressive, Washington gave a public impression of austerity, though he was capable of gaiety in private. His life was characterized by a

strict sense of duty to his people. The standard biographies are by Fitzpatrick, Ford, Hughes and Stephenson.

JOHN ADAMS

was born on October 30 (October 19, old style), 1735, at Braintree, Massachusetts. A Harvard graduate, he considered teaching and the ministry but finally turned to the law and was admitted to the bar in 1758. He opposed the Stamp Act, served as lawyer for patriots indicted by the British and, by the time of the Continental Congresses, was in the vanguard of the movement for independence. In 1778 he was sent to France. Subsequently he helped negotiate the peace treaty with Britain, and in 1785 became the U. S. envoy to London. Resigning in 1788, he was elected Vice President under Washington, and was re-elected in 1792.

Though a Federalist, Adams did not get along with Hamilton who sought to prevent his election to the presidency in 1796, and thereafter intrigued against his administration. Adams was chosen with 71 electoral votes to 68 for his closest competitor, Thomas Jefferson, who became Vice President. In 1798 Adams' independent policy averted a war with France but completed the break with Hamilton and the right-wing Federalists while, at the same time, the enactment of the Alien and Sedition Acts, directed against foreigners and against critics of the government, exasperated the Jeffersonian opposition. The split between Adams and Hamilton elected Jefferson in 1800. Adams retired to his home in Quincy, Massachusetts. He later conducted a long correspondence with Jefferson and they died on the same day, July 4, 1826.

Stout, somewhat vain and irascible, Adams was honest, fearless and essentially fair-minded. His *Defence of the Constitutions of Government of the United States* (1787) contains original and striking conservative political ideas. He married Abigail Smith in 1764, and their life together was long and happy. The standard biographies are by Morse and Chinard.

THOMAS JEFFERSON

was born on April 13 (April 2, old style) 1743, at Shadwell in Goochland (now Albemarle) County, Virginia. A William and Mary graduate, he studied law but from the start showed an interest in science and philosophy. His literary skill and political clarity brought him to the forefront of the revolutionary movement in Virginia. As delegate to the Contin-

tal Congress, he drafted the Declaration of Independence. In 1776 he entered the Virginia House of Delegates and initiated a comprehensive reform program looking toward the abolition of feudal survivals in land tenure and the separation of church and state.

In 1779 he became governor, but constitutional limitations on his power combined with his own lack of executive energy caused an unsatisfactory administration, culminating in Jefferson's virtual abdication when the British invaded Virginia in 1781. He now retired to his beautiful home at Monticello, to his wife, Martha Wayles Skelton, whom he had married in 1772 and who died in 1782, and to his children.

Jefferson's *Notes on Virginia* (1784-85) illustrate his many-faceted interests, his limitless intellectual curiosity, his deep faith in agrarian democracy. Sent to Congress in 1783, he helped lay down the decimal system and drafted basic reports on the organization of the western lands. In 1789 Washington appointed him Secre-France, where the Anglo-Saxon liberalism he had drawn from Locke was stimulated by contact with the thought which would soon ferment in the French Revolution. In 1790 Washington appointed him Secretary of State. While favoring the Constitution and a strengthened central government, Jefferson came to believe that Hamilton contemplated the establishment of a monarchy. Growing differences resulted in Jefferson's resignation on Dec. 31, 1793.

Elected Vice President in 1796, Jefferson continued to serve as spiritual leader of the opposition to Federalism, particularly to the repressive Alien and Sedition Acts. He was elected President in 1800 by the House of Representatives as a result of Hamilton's decision to throw the Federalist votes to him rather than to Aaron Burr, who had tied him in electoral votes. The purchase of Louisiana from France in 1803, though in violation of his earlier constitutional scruples, was the most notable act of his administration. Re-elected in 1804 with 162 electoral votes to 14 for the Federalist Charles C. Pinckney, Jefferson tried desperately during his second term to keep the United States out of the Napoleonic Wars in Europe, employing to this end the unpopular embargo policy.

After his retirement to Monticello in 1809, he developed his interest in education, founding the University of Virginia and watching its development with never-flagging interest. He died at Monticello on July 4, 1826. Tall, loose-jointed, a poor speaker, Jefferson had an enormous variety of interests and skills, ranging from education and science to architecture and music. Economically his conception of democracy presupposed an essentially rural community of small freeholds; but his deep

and abiding faith in the common man provides inspiration for future generations. The standard biographies are by Chinard, Bowers, Kimball and Randall.

JAMES MADISON

was born in Port Conway, Virginia, on March 16 (March 5, old style), 1751. A Princeton graduate, he threw himself into the struggle for independence on his return to Virginia in 1771. In the seventies and eighties he was active both in state politics, where he championed the Jefferson reform program, and in the Continental Congress. He was influential in the Constitutional Convention as leader of the group favoring a strong central government and as recorder of the debates; and he subsequently wrote, in collaboration with Alexander Hamilton and John Jay, the *Federalist* papers to aid the campaign for the adoption of the Constitution.

In the new Congress, Madison soon emerged as the leader in the House of the men who opposed Hamilton's financial program and his pro-British leanings in foreign policy. Retiring from Congress in 1797, he continued active in Virginia and drafted the Virginia Resolution protesting the Alien and Sedition Acts. His intimacy with Jefferson made him natural choice for Secretary of State in 1801.

In 1809 Madison succeeded Jefferson as President, with 122 electoral votes to 47 for the Federalist, C. C. Pinckney, and 6 scattering. His attractive wife, Dolly Payne Todd, whom he married in 1794, brought a new social sparkle to the executive mansion. In the meantime, increasing tension with Britain culminated in the War of 1812—a war for which the United States was unprepared, and for which Madison lacked the executive talent to clear out incompetence and mobilize the nation's energies. Madison was re-elected in 1812, with 128 electoral votes to 89 for the Federalist, De Witt Clinton. In 1814 the British actually captured Washington and forced Madison to flee to Virginia.

In his domestic program, Madison capitulated to the Hamiltonian policies that he had resisted twenty years before, signing bills to establish a United States Bank and a higher tariff. Following his presidency, he remained in retirement in Virginia until his death on June 28, 1836. Small, wrinkled, unimpressive, Madison had an acute political intelligence but lacked executive force. The standard lives are by Hunt, Brant and Rives.

JAMES MONROE

was born on April 28, 1758, in Westmoreland County, Virginia. A William and Mary graduate, he served in the army during the first years of the Revolution and

was wounded at Trenton. He then entered Virginia politics and later national politics under the sponsorship of Jefferson. In 1786 he married Eliza Kortright.

Fearing centralization, Monroe opposed the adoption of the Constitution and, as senator from Virginia, was highly critical of the Hamiltonian program. In 1794 he was appointed minister to France where his ardent sympathies with the Revolution exceeded the wishes of the State Department. A troubled diplomatic career ended with his recall in 1796. From 1799 to 1802 he was governor of Virginia. In 1803 Jefferson sent him to France to help negotiate the Louisiana Purchase and for the next few years he was active in various continental negotiations.

In 1808 Monroe flirted with the radical wing of the Republican party, which opposed Madison's candidacy; but the presidential boom came to naught and, after a brief term as governor of Virginia in 1811, Monroe accepted Madison's offer of the State Department. During the war he vainly sought a field command and served as acting Secretary of War in the last stages.

Elected President in 1816 with 183 electoral votes to 34 for the Federalist Rufus King, Monroe, the last of the Virginia dynasty, pursued the course of systematic tranquilization which won for his terms the name "the era of good feelings." Re-elected without opposition in 1820, he continued Madison's surrender to the Hamiltonian domestic program, signed the Missouri Compromise, acquired Florida and, with the able assistance of his Secretary of State, John Quincy Adams, promulgated the Monroe Doctrine in 1823, declaring against foreign colonization or intervention in the Americas. He died in New York City on July 4, 1831.

A sound man of medium abilities, Monroe possessed qualities of judgment rather than of leadership. The standard biographies are by Morgan, Gilman and Styron.

JOHN QUINCY ADAMS

was born on July 11, 1767, at Braintree, Massachusetts, the son of John Adams. He spent his early years in Europe with his father, graduated from Harvard and entered law practice. His anti-Jeffersonian newspaper articles won him political attention. In 1794 he became minister to the Netherlands, the first of several diplomatic posts which occupied him until his return to Boston in 1801. In 1797 he married Louisa Catherine Johnson.

In 1803 he was elected to the Senate, nominally as a Federalist, but his repeated displays of independence on such issues as the Louisiana Purchase and the embargo caused his party to compel his resignation and ostracize him socially. In 1809 Madison

rewarded him for his support of Jefferson by appointing him minister to St. Petersburg. He helped negotiate the Treaty of Ghent in 1814 and became minister to London. In 1817 Monroe appointed him Secretary of State where he served with great distinction, gaining Florida from Spain without hostilities and playing an equal part with Monroe in formulating the Monroe Doctrine.

When no presidential candidate received a majority of electoral votes in 1824, Adams, with the support of Henry Clay, was elected in the House over Andrew Jackson who had the original plurality. Adams had ambitious plans of government activity to foster internal improvements and promote the arts and sciences; but congressional obstructionism combined with his own unwillingness or inability to play the role of a politician meant that little was accomplished. Retiring to Quincy after his defeat in 1828, he was elected to the House of Representatives where, though nominally a Whig, he pursued as ever an independent course. He led the fight to force Congress to receive anti-slavery petitions and fathered the Smithsonian Institution.

Stricken on the floor of the House, he died on February 23, 1848. Tactless, brusque, conscientious, a rough and savage debater, Adams spared neither himself nor his enemies. His long and detailed *Diary* gives a unique picture of the personalities and politics of the times. The standard biographies are by Morse and Clark.

ANDREW JACKSON

was born on March 15, 1767, in what is now generally agreed to be Waxhaw, South Carolina. After a turbulent boyhood as an orphan and a British prisoner, he moved west to Tennessee where he soon qualified for law practice but found time for such frontier pleasures as horse racing, cock-fighting and dueling. His marriage to Rachel Donelson Robards in 1791 was complicated by subsequent legal uncertainties about the status of her divorce. During the seventeen nineties Jackson served in the Tennessee constitutional convention, the federal House of Representatives, the federal Senate and the Tennessee supreme court.

After some years as a country gentleman, living at the Hermitage near Nashville, Jackson in 1812 was given command of Tennessee troops sent against the Creeks. He defeated the Indians at Horseshoe Bend in 1814; subsequently he became a major general and won the battle of New Orleans over veteran British troops though after the treaty of peace had been signed at Ghent. In 1818 General Jackson invaded Florida, captured Pensacola and hanged two Englishmen named

Arbuthnot and Ambrister, creating an international incident. A presidential boom began for him in 1821 and in its service he returned to the Senate (1823-25). Though he won a plurality of electoral votes in 1824, he lost in the House when Clay threw his strength to Adams; he won easily in 1828 by an electoral vote of 178 to 83.

As President, Jackson greatly expanded the power and prestige of the presidential office and carried through an unexampled program of domestic reform, vetoing the bill to extend the United States Bank, moving toward a hard-money currency policy and checking the program of federal internal improvements. He also vindicated federal authority against South Carolina with its doctrine of nullification and against France on the question of debts. The support given his policies by the workingmen of the East as well as by the farmers of the East, West and South resulted in his triumphant re-election in 1832 over Clay by an electoral vote of 219 to 49, with 18 scattering and 2 not cast.

After watching the inauguration of his hand-picked successor, Martin Van Buren, Jackson retired to the Hermitage where he maintained a lively interest in national affairs until his death on June 8, 1845. A tall, dignified man with a drawn and wrinkled face, Jackson has been endowed by partisan historians with a violence and irascibility he appears not to have possessed. His great contribution was to adjust the presidential office and the democratic doctrines of Jefferson to the new situation created by the Industrial Revolution. The standard biographies are by James, Bassett and Parton.

MARTIN VAN BUREN

was born on December 5, 1782, at Kinderhook, New York. After graduating from the village school, he became a law clerk, entered practice in 1803 and soon became active in state politics as state senator and attorney general. In 1821 he was elected to the United States Senate. He threw the support of his efficient political organization, known as the Albany Regency, to William H. Crawford in 1824 and to Jackson in 1828. After leading the opposition to Adams' administration in the Senate, he served briefly as governor of New York and resigned to become Jackson's Secretary of State. He soon became on close personal terms with Jackson and played an important part in turning the Jacksonian program from the lines intended by his original Western backers.

In 1832 Van Buren became Vice President; in 1836, President, with an electoral vote of 170 against 124 scattered among four opponents. The Panic of 1837 over-

shadowed his term. He attributed it to the overexpansion of the credit and favored the establishment of an independent treasury as repository for the federal funds. In 1840 he established a ten-hour day on public works. Defeated by Harrison in 1840, he was the leading contender for the Democratic nomination in 1844 until he publicly opposed immediate annexation of Texas and was subsequently beaten by the Southern delegations at the Baltimore convention. This incident increased his growing misgivings about the slave power.

After working behind the scenes among the antislavery Democrats, Van Buren joined in the movement which led to the Free-Soil party and became its candidate for President in 1848. He subsequently returned to the Democratic party while continuing to object to its pro-Southern policy. He died in Kinderhook on July 24, 1862. His *Autobiography* throws valuable sidelights on the political history of the times.

Small, erect, dapper, Van Buren had a reputation for slick politicking which won him such sobriquets as the Little Magician and the Red Fox of Kinderhook; but, as his later career showed, he was capable of taking firm and unpopular stands on public issues. His wife Hannah Hoes, whom he married in 1807, died in 1819. The standard biographies are by Shepard and Lynch.

WILLIAM HENRY HARRISON

was born in Charles City County, Virginia, on February 9, 1773. Joining the army in 1791, he was active in Indian fighting in the Northwest, became secretary of the Northwest Territory in 1798 and governor of Indiana in 1800. He married Anna Symmes in 1795. Growing discontent over white encroachments on Indian lands led to the formation of an Indian alliance under Tecumseh to resist further aggressions. In 1811 Harrison won a nominal victory over the Indians at Tippecanoe and in 1813 a more decisive one at the Battle of the Thames, where Tecumseh was killed.

After resigning from the army in 1814, Harrison had an obscure career in politics and diplomacy, ending up in twenty years as a county recorder in Ohio. Nominated for President in 1835 as a military hero whom the conservative politicians hoped to be able to control, he ran surprisingly well against Van Buren in 1836. Four years later he defeated Van Buren by an electoral vote of 234 to 60 but caught pneumonia and died in Washington a month after his inauguration, April 4, 1841. Harrison's qualities were those of a soldier rather than of a statesman or political leader. The standard biographies are by Cleaves and Goebel.

JOHN TYLER

was born in Charles City County, Virginia, on March 29, 1790. A William and Mary graduate, he entered law practice and politics, serving in the House of Representatives (1816-21) and later as governor of Virginia (1825-27), and as senator. A thorough-going strict constructionist, he supported Crawford in 1824 and Jackson in 1828 but broke with Jackson over his Bank policy and became a member of the Southern state-rights group which cooperated with the Whigs. In 1836 he resigned from the Senate rather than follow instructions from the Virginia legislature to vote for a resolution expunging censure of Jackson from the Senate record.

Elected Vice President on the Whig ticket in 1840, Tyler succeeded to the presidency on Harrison's death. His strict-constructionist views soon caused a split with the Henry Clay wing of the Whig party and a stalemate on domestic questions. Tyler's more considerable achievements were his support of the Webster-Ashburton treaty with Britain and his success in bringing about the annexation of Texas through joint congressional resolution.

After his presidency he lived in retirement in Virginia until the outbreak of the Civil War when he emerged briefly as chairman of a peace convention and then as delegate to the provisional Congress of the Confederacy. He died on January 18, 1862. He was married first to Letitia Christian March in 1813 and, two years after her death in 1842, to Julia Gardiner. Witty, amiable, courteous, Tyler was a Virginia gentleman whose presidency was hamstrung by the basic contradiction between his own ideas and those of the party which put him on the ticket as Vice President. The standard biographies are by Chitwood and Tyler.

JAMES KNOX POLK

was born in Mecklenburg County, North Carolina, on November 2, 1795. A graduate of the University of North Carolina, he moved west to Tennessee, was admitted to the bar and soon became prominent in state politics. In 1825 he was elected to the House of Representatives where he opposed Adams and, after 1829, became Jackson's floor leader in the fight against the Bank. In 1835 he became Speaker of the House. In 1839 he was elected governor of Tennessee but was beaten in tries for re-election in 1841 and 1843.

The supporters of Van Buren for the Democratic nomination in 1844 counted on Polk as his running mate; but, when Van Buren's stand on Texas alienated Southern support, the convention swung to Polk on the ninth ballot. He was elected over Henry Clay, the Whig candidate, by an

electoral vote of 170 to 105. Rapidly disillusioning those who thought that he would not run his own administration, Polk proceeded steadily and precisely to achieve four major objectives—the acquisition of California, the settlement of the Oregon question, the reduction of the tariff and the establishment of the independent treasury. He also enlarged the Monroe Doctrine to exclude all non-American intervention in American affairs, whether forcible or not, and he forced Mexico into a war which he waged to a successful conclusion. His wife Sarah Childress, whom he married in 1824, was a woman of charm and ability. Polk died in Nashville, Tennessee, on June 15, 1849.

Serious, hardworking, lacking in color, Polk has long been underrated by historians who mistakenly regarded him as a slaveholders' puppet; in fact, few presidents have so thoroughly controlled their own administration or have so ably accomplished the purposes they set for themselves. Polk's *Diary* reflects the mood and problems of his presidency. The standard biography is by McCormac.

ZACHARY TAYLOR

was born at Montebello, Orange County, Virginia, on November 24, 1784. Embarking on a military career in 1808, Taylor fought in the War of 1812, the Black Hawk War and the Seminole War, holding in between garrison jobs on the frontier or desk jobs in Washington. A brigadier general as a result of his victory over the Seminoles at Lake Okeechobee (1837), Taylor held a succession of Southwestern commands and in 1846 established a base on the Rio Grande, where his forces engaged in hostilities which precipitated the war with Mexico. He captured Monterrey in July, 1846, and, disregarding Polk's orders to stay on the defensive, defeated Santa Anna at Buena Vista in February, 1847, ending the war in the northern provinces.

Though Taylor had never cast a vote for President, his party affiliations were Whiggish, and his availability was increased by his difficulties with Polk. He was elected President over the Democrat Lewis Cass by an electoral vote of 163 to 127. During the revival of the slavery controversy, which was to result in the Compromise of 1850, Taylor began to take an increasingly firm stand against appeasing the South; but he died in Washington on July 9, 1850, in the midst of the fight over the Compromise. He married Margaret Mackall Smith in 1810. His bluff and simple soldierly qualities won him the name of Old Rough and Ready. During his brief term as President he displayed a growing insight into political questions. The standard biographies are by Hamilton and by Bent and McKinley.

MILLARD FILLMORE

was born at Locke, Cayuga County, New York, on January 7, 1800. A lawyer, he entered politics as an Antimason under the sponsorship of Thurlow Weed, editor and party boss, and subsequently followed Weed into the Whig party. He served in the House of Representatives (1832-34 and 1836-42) and played a leading role in writing the tariff of 1842. Defeated for governor of New York in 1844, he became comptroller in 1848, was put on the Whig ticket with Taylor as a concession to the Clay wing of the party and became President upon Taylor's death in 1850.

As President, Fillmore broke with Weed and William H. Seward and associated himself with the pro-Southern Whigs, supporting the Compromise of 1850. Defeated for the Whig nomination in 1852, he ran for President in 1856 as candidate of the American or Know-Nothing party, which sought to unite the country against foreigners in the alleged hope of diverting it from the explosive slavery issue. Fillmore opposed Lincoln during the Civil War. He died in Buffalo on March 8, 1874. He was married in 1826 to Abigail Powers, who died in 1853, and in 1858 to Caroline Carmichael McIntosh. Urbane, gracious, colorless and weak, Fillmore was an undistinguished President. The standard biography is by Griffis.

FRANKLIN PIERCE

was born at Hillsborough, New Hampshire, on November 23, 1804. A Bowdoin graduate and lawyer, he won rapid political advancement in the Democratic party, in part because of the prestige of his father, Governor Benjamin Pierce. By 1831 he was Speaker of the New Hampshire House of Representatives; from 1833 to 1837 he served in the federal House and from 1837 to 1842 in the Senate. His wife, Jane Means Appleton, whom he had married in 1834, disliked Washington and the somewhat dissipated life led by Pierce; and in 1842 Pierce, resigning from the Senate, took up a successful law practice in Concord, New Hampshire.

During the Mexican War Pierce was a brigadier general. Thereafter he continued to oppose antislavery tendencies within the Democratic party. As a result, he was the Southern choice to break the deadlock at the Democratic convention of 1852 and was nominated on the 49th ballot. Pierce rolled up 254 electoral votes to 42 for Winfield Scott, the Whig candidate.

As President, Pierce followed a course of appeasing the South at home and of playing with schemes of territorial expansion abroad. The failure of both his foreign and domestic policies prevented his renomination; and he died in Concord, New Hampshire, on October 8, 1869, in relative ob-

scurity. A kindly and courteous person, Pierce was weak, unstable and lacking in presidential qualities. The standard biography is by Nichols.

JAMES BUCHANAN

was born near Mercersburg, Pennsylvania, on April 23, 1791. A Dickinson graduate and a lawyer, he entered Pennsylvania politics as a Federalist. With the disappearance of the Federalist party, he became a Jacksonian Democrat. He served with ability in the House (1820-31), as minister to St. Petersburg (1831-34) and in the Senate (1834-35), and in 1845 became Polk's Secretary of State. Disappointed in the presidential nomination in 1852, Buchanan became minister to Britain where he participated with other American diplomats in Europe in drafting the expansionist Ostend Manifesto.

In 1856 Buchanan received the Democratic nomination and won the election, gaining 174 electoral votes to 114 for John C. Frémont, the Republican candidate, and 8 for Millard Fillmore, American party. The growing crisis over slavery presented Buchanan with problems he lacked the will to tackle. His appeasement of the South alienated the Stephen Douglas wing of the Democratic party without reducing Southern militancy on slavery issues. While denying the right of secession, Buchanan also denied that the federal government could do anything about it. He supported the administration during the Civil War and died in Lancaster, Pennsylvania, on June 1, 1868.

The only President to remain a bachelor throughout his term, Buchanan used his charming niece Harriet Lane as White House hostess. Legalistic, indecisive and timorous as President, Buchanan filled his other public offices capably. The standard biography is by Curtis.

ABRAHAM LINCOLN

was born in Hardin (now Larue) County, Kentucky, on February 12, 1809. His family moved to Indiana and then to Illinois, and Lincoln gained what education he could along the way. While reading law, he worked in a store, managed a mill, surveyed, and split rails. In 1834 a went to the state legislature as a Whig and became the party's floor leader. For the next twenty years he remained in law practice in Springfield, except for a single term (1847-49) in Congress where he denounced the Mexican War. In 1855 he was a candidate for senator and in 1856 he joined the new Republican party.

A leading but unsuccessful candidate for the vice-presidential nomination with Frémont, Lincoln gained national attention in 1858 when, as Republican candidate for

senator from Illinois, he engaged in a series of debates with Stephen A. Douglas, the Democratic candidate. He lost the senatorial election, but continued to prepare the way for the 1860 Republican convention and was rewarded with the presidential nomination on the third ballot. He polled 180 electoral votes, as against the 123 of his three opponents, but had only a plurality of the popular vote.

From the start, Lincoln made clear that, unlike Buchanan, he believed the national government had the power to crush the rebellion. Not an abolitionist, he held the slavery issue subordinate to that of preserving the Union but soon perceived that the war could not be brought to a successful conclusion without freeing the slaves. His administration was hampered by the incompetence of many Union generals, the inexperience of the troops and the harassing political tactics both of the Republican Radicals, who favored a hard policy toward the South, and the Democratic Copperheads, who desired a negotiated peace. The Gettysburg Address of November 19, 1863, marks the high point in the record of American eloquence. His patient search for a winning combination finally brought Generals Ulysses S. Grant and William T. Sherman to the top; and their series of victories in 1864 dispelled the mutterings from both Radicals and Peace Democrats which at one time seemed to threaten Lincoln's re-election. He received 212 electoral votes to 21 for George B. McClellan, the Democratic candidate. His inaugural address urged leniency toward the South: "With malice toward none, with charity for all . . . let us strive on to finish the work we are in; to bind up the nation's wounds . . ." This policy aroused growing opposition on the part of the Republican Radicals, but Lincoln was assassinated by John Wilkes Booth at Ford's Theater, Washington, on April 14, 1865, before the matter could be put to test.

Lincoln's marriage to Mary Todd in 1842 was often unhappy and turbulent, in part because of his wife's pronounced instability. By his remarkable literary artistry, his essential patience and devotion, his profound sense of the importance of government by, for and of the people, by the manner of his life and of his death, Lincoln has won a unique place in the hearts of Americans. The standard biographies are by Sandburg, Herndon, Nicolay and Hay.

ANDREW JOHNSON

was born at Raleigh, North Carolina, on December 29, 1808. Self-educated, he became a tailor in Greeneville, Tennessee, but soon went into politics where he rose steadily. From 1843 to 1853 he served in the House of Representatives, 1853-57 as governor of Tennessee and in 1857 was

elected Senator. Politically he was a Jacksonian Democrat, and his specialty was the fight for a more equitable land policy. Alone among the Southern Senators, he stood by the Union during the Civil War. In 1862 he became war governor of Tennessee and carried out a thankless and difficult job with great courage. Johnson became Lincoln's running mate in 1864 as result of an attempt to give the ticket a nonpartisan and nonsectional character. Succeeding to the presidency on Lincoln's death, Johnson sought to carry out his policy but without his political skill. The result was a hopeless conflict with the Radical Republicans who dominated Congress, passed measures over Johnson's vetoes and attempted to limit the power of the executive concerning appointments and removals. The conflict culminated with Johnson's impeachment for attempting to remove his disloyal Secretary of War in defiance of the Tenure of Office Act which required senatorial concurrence for such dismissals. The opposition failed by one vote to get the two-thirds necessary for conviction.

After his presidency, Johnson maintained an interest in politics and in 1874 was elected to the Senate. He died near Carter Station, Tennessee, on July 31, 1875. He married Eliza McCardle in 1827. An honest, courageous and intelligent man, Johnson lacked the tact, patience and self-control to be an effective President. The standard biographies are by Winston, Stryker and Milton.

ULYSSES SIMPSON GRANT

was born (as Hiram Ulysses Grant) at Point Pleasant, Ohio, on April 27, 1822. He finished West Point in 1843 and served without particular distinction in the Mexican War. In 1848 he married Julia Dent. He resigned from the army in 1854, following warnings from his commanding officer about his drinking habits, and for the next six years held a wide variety of jobs in the Middle West. With the outbreak of the Civil War, he sought a command and soon, to his surprise, was made a brigadier general. His continuing successes in the western theaters, culminating in the capture of Vicksburg in 1863, brought him national fame and soon the command of all the Union armies. His dogged, implacable policy of concentrating on dividing and destroying the Confederate armies brought the war to an end in 1865. In 1866 he was made full general.

Grant's relations with Johnson grew steadily worse; and in 1868, as the Republican candidate for President, Grant was elected with 214 electoral votes to 80 for the Democrat Horatio Seymour. From the start Grant showed his unfitness for the office. His cabinet was weak, his do-

mestic policy was confused, many of his intimate associates were corrupt. The notable achievement in foreign affairs was the settlement of controversies with Great Britain in the Treaty of London (1871), negotiated by his able Secretary of State, Hamilton Fish.

Nominated for a second term, he defeated Horace Greeley, the Democratic and Liberal Republican candidate, 286 votes to 63. The Panic of 1873 created difficulties for his second term.

After retiring from office, Grant toured Europe for two years and returned in time to accede to a third-term boom, but was beaten in the convention of 1880. Illness and bad business judgment darkened his last years, but he worked steadily at the *Personal Memoirs* which were to be so successful when published after his death at Mount McGregor, near Saratoga, New York, on July 23, 1885. Inarticulate, taciturn, loyal to his friends, he was an able general who should never have accepted the presidency. The standard biographies are by Hesseltine and Woodward.

RUTHERFORD BIRCHARD HAYES

was born at Delaware, Ohio, on October 4, 1822. A graduate of Kenyon College and the Harvard Law School, he practiced law in Sandusky and then in Cincinnati, Ohio. In 1852 he married Lucy Webb. A Whig, he joined the Republican party in 1855. During the Civil War he rose to the rank of major general. He served in Congress from 1864 to 1867 and then confirmed a reputation for honesty and efficiency in two terms as governor of Ohio. His return to the governorship in 1875 made him the logical candidate for those Republicans who wished to stop James G. Blaine in 1876, and he was successfully nominated.

The result of the election was for some time in doubt and hinged upon disputed returns from South Carolina, Louisiana, Florida and Oregon. Samuel J. Tilden, the Democratic candidate, had the larger popular vote but was adjudged by the strictly partisan decisions of the Electoral Commission to have one less electoral vote, 185 to 184. The national acceptance of this result was due in part to the general understanding that Hayes would pursue a conciliatory policy toward the South. He withdrew the troops from the South, took a conservative position on financial and labor issues and urged civil service reform.

Hayes served only one term by his own wish and spent the rest of his life in various humanitarian endeavors. He died in Fremont, Ohio, on January 17, 1893. A hard-working, conscientious, sensible man, Hayes represented the best type of Republican of his day. The standard biographies are by Eckenrode and Williams.

JAMES ABRAM GARFIELD,

the last President to be born in a log cabin, was born at Cuyahoga County, Ohio, on November 19, 1831. A Williams graduate, he taught school for a time and entered Republican politics in Ohio. In 1858 he married Lucretia Rudolph. During the Civil War he had a promising career, rising to the rank of major general of volunteers; but in 1863 he was elected to the House of Representatives where he served until 1880. His oratorical and parliamentary abilities soon made him the leading Republican in the House, though his record was marred by his unorthodox acceptance of a fee in the DeGolyer paving contract case and by suspicions of his complicity in the Credit Mobilier scandal.

In 1880 Garfield was elected to the Senate, but instead became the presidential candidate on the 36th ballot as a result of a deadlock in the Republican convention. He gained 214 electoral votes to 155 for General Winfield Scott Hancock, the Democratic candidate. Garfield's administration was barely under way when he was shot by Charles J. Guiteau, a disappointed office seeker, in July. He died in Elberon, New Jersey, on September 19, 1881. An attractive and eloquent man, he was much beloved in his day. The standard biographies are by Smith and Caldwell.

CHESTER ALAN ARTHUR

was born at Fairfield, Vermont, on October 5, 1830. A graduate of Union College, he became a successful New York lawyer. In 1859 he married Ellen Herndon. During the Civil War he held administrative jobs in the Republican state administration and in 1871 was appointed collector of the Port of New York by Grant. This post gave him control over considerable patronage; and, though not personally corrupt, Arthur managed his power in the interests of the New York machine so openly that President Hayes in 1877 called for an investigation and suspended Arthur from his responsibilities.

In 1880 Arthur was nominated for Vice President in the hope of conciliating the followers of Grant and the powerful New York machine. As President on Garfield's assassination, Arthur, stepping out of his familiar role as spoilsman, backed civil service reform, reorganized the cabinet and prosecuted political associates accused of post office graft. Losing machine support and failing to gain the reformers, he was not renominated. He died in New York City on November 18, 1886. A tall, handsome, dignified man with real administrative abilities, he was a better President than his previous record promised. The standard biography is by Howe.

STEPHEN GROVER CLEVELAND

was born at Caldwell, New Jersey, on March 18, 1837. He was admitted to the bar in Buffalo, New York, in 1859 and lived there as a lawyer, with occasional incursions into Democratic politics, for more than twenty years. He did not participate in the Civil War. As mayor of Buffalo in 1881, he carried through a reform program so ably that the Democrats ran him successfully for governor in 1882. In 1884 he won the Democratic nomination for President. The campaign contrasted Cleveland's spotless public career with the uncertain record of James G. Blaine, the Republican candidate, and Cleveland received enough Mugwump (Independent Republican) support to win by 219 to 182 electoral votes.

As President, Cleveland pushed civil service reform, opposed the pension grab and attacked the high tariff rates. While in the White House he married Frances Folsom (1886). Renominated in 1888, Cleveland was defeated by Benjamin Harrison, polling more popular but fewer electoral votes. In 1892 he was re-elected over Harrison, 277 to 145, with 22 votes for James B. Weaver, the Populist candidate. When the Panic of 1893 burst upon the country, Cleveland's attempts to solve it by sound-money measures alienated the free-silver wing of the party, while his tariff policy alienated the protectionists. In 1894 he sent troops to break the Pullman strike. In foreign affairs his firmness caused Great Britain to back down in the Venezuela border dispute.

In his last years Cleveland was an active and much respected public figure. He died in Princeton, New Jersey, on June 24, 1908. An honest, stubborn, high-principled man, Cleveland was an old-fashioned liberal in the nineteenth-century sense who was baffled by the new problems of industrial society. The standard biographies are by Nevins and McElroy.

BENJAMIN HARRISON

was born in North Bend, Ohio, on August 20, 1833, the grandson of William Henry Harrison. A graduate of Miami University, he took up the law in Indiana and became active in Republican politics. In 1853 he married Caroline Lavina Scott. During the Civil War he rose to the rank of brigadier general. A sound-money Republican, he was elected senator from Indiana in 1881 and in 1888 received the Republican nomination for President on the 8th ballot. Though behind on the popular vote, he won over Grover Cleveland in the electoral college by 233 to 168.

As President, Benjamin Harrison failed to please either the bosses or the reform element in the party. In foreign affairs he backed Secretary of State Blaine whose policy foreshadowed later American im-

perialism. In 1892 Harrison was renominated, but Cleveland beat him in the election. His wife died in the White House in 1892, and Harrison married her niece, Mary Scott (Lord) Dimmick, in 1896. After his presidency, he resumed law practice. He died in Indianapolis, Indiana, on March 13, 1901. Harrison was an honest man of very medium abilities.

WILLIAM MCKINLEY

was born in Niles, Ohio, on January 29, 1843. A graduate of Allegheny College, he rose from the ranks to become a major in the Civil War. Subsequently he opened a law office in Canton, Ohio, and in 1871 married Ida Saxton. Elected to Congress in 1876, he served there steadily till 1890, except for 1884-86. His faithful advocacy of business interests culminated in the passage of the highly protective McKinley Tariff of 1890. With the support of Mark Hanna, a shrewd Cleveland businessman interested in safeguarding tariff protection, McKinley became governor of Ohio in 1891 and Republican presidential candidate in 1896. The business community, alarmed by the progressivism of William Jennings Bryan, the Democratic candidate, spent considerable money to assure McKinley's victory which was by the margin of 271 to 176 in the electoral college.

The chief event of McKinley's administration was the war with Spain which resulted in our acquisition of the Philippines and other islands. With imperialism as an issue, McKinley defeated Bryan again in the election of 1900 by 292 to 155. On September 6, 1901, he was shot at Buffalo by Leon F. Czolgosz, an anarchist, and he died there on September 14. McKinley was a characteristic Republican politician dedicated to the service of the business community. The standard biography is by Olcott.

THEODORE ROOSEVELT

was born in New York City on October 27, 1858. A Harvard graduate, he was early interested in ranching, in politics and in writing picturesque historical narratives. He was a Republican member of the New York Assembly in 1882-84, an unsuccessful candidate for mayor of New York in 1886, a U. S. Civil Service Commissioner under Harrison, Police Commissioner of New York City in 1895 and Assistant Secretary of the Navy under McKinley in 1897. After exuding a belligerence which helped bring on the war with Spain, he resigned in 1898 to help organize a volunteer regiment named the Rough Riders and take a more direct part in the war. Always publicity-shrewd, he won the New York gubernatorial nomination in 1898 in spite of pronounced lack of enthusiasm on the part of the bosses.

After two years of T.R. in Albany, the New York bosses succeeded in getting him the vice-presidential nomination in 1900. Roosevelt accepted it with reluctance, feeling that his career had been ruined. As President on McKinley's assassination, he perceived the new popular mood of progressivism and initiated a policy of trust busting, designed to control giant corporations. He also strengthened government powers over interstate commerce and launched a conservation program to save natural resources. In foreign affairs he pursued a truculent policy, permitting the instigation of a revolt in Panamá to dispose of Colombian objections to the Panama Canal and helping to maintain the balance of power in the East by bringing the Russo-Japanese war to an end. In 1904 he decisively defeated Alton B. Parker, his conservative Democratic opponent, by an electoral margin of 336 to 140.

Following his second term he went big-game hunting in Africa and toured Europe. On his return to the United States, his increasing coldness toward Taft led him to overlook his earlier disclaimer of third-term ambitions and to re-enter politics. Defeated by the machine in the Republican convention of 1912, he organized the Progressive party and polled more votes than Taft, though the split brought about the election of Wilson. From 1915 on, Roosevelt strongly favored intervention in the European war. He became deeply embittered at Wilson's refusal to allow him to raise a volunteer division. He died in Oyster Bay, New York, on January 6, 1919. He was married twice: in 1880 to Alice Hathaway Lee, who died in 1884; and in 1886 to Edith Kermit Carow.

The athletic advocate of the strenuous life, with his high voice, prominent teeth and thick glasses, Roosevelt captured the imagination of the American people. More sober judgment suggests that, so far as his progressivism was concerned, his bark was worse than his bite, but he was one of the great personalities of American history. The standard biography is by Pringle.

WILLIAM HOWARD TAFT

was born in Cincinnati, Ohio, on September 15, 1857. A Yale graduate, he entered Ohio Republican politics in the eighteenthies. In 1886 he married Helen Herron. From 1887 to 1890, he served on the Ohio superior court; 1890-92, as solicitor general of the United States; 1892-1900, on the federal circuit court. In 1900 McKinley appointed him president of the Philippine Commission and in 1901 governor general. Taft had great success in pacifying the Filipinos, solving the problem of the church lands, improving economic conditions and establishing limited self-govern-

ment. His period as Secretary of War 1904-08 further demonstrated his capacity as administrator and conciliator; and he was Roosevelt's hand-picked successor in 1908. In the election he polled 321 electoral votes to 162 for William Jennings Bryan.

As President, though he carried on many of Roosevelt's policies, Taft got into increasing trouble with the progressive wing of the party and displayed mounting irritability and indecision. After his defeat in 1912, he became professor of constitutional law at Yale. In 1921 he was appointed Chief Justice of the United States. He died in Washington on March 8, 1930. Enormously large, deliberate and good-humored, Taft excelled as an administrator and judge, not as a political leader. The standard biography is by Pringle.

THOMAS WOODROW WILSON

was born in Staunton, Virginia, on December 28, 1856. A Princeton graduate, he turned from law practice to post-graduate work in political science at Johns Hopkins University, receiving his Ph.D. in 1886. He taught at Bryn Mawr, Wesleyan and Princeton, and in 1902 was made president of Princeton. After an unsuccessful attempt to democratize the social life of Princeton, he welcomed an invitation in 1910 to be the Democratic gubernatorial candidate in New Jersey. His success in fighting the machine and putting through a reform program attracted national attention.

In 1912, after a protracted contest at Baltimore, Wilson won the Democratic nomination on the 46th ballot. In the election he received 435 electoral votes to 88 for Roosevelt and 8 for Taft. During his first term Wilson proceeded under the standard of the New Freedom to enact a program of domestic reform, including the Federal Reserve Act, the Clayton Anti-Trust Act, the establishment of the Federal Trade Commission and other measures designed to restore competition in the face of the great monopolies. In foreign affairs, while privately sympathetic with the Allies, he strove to maintain strict neutrality in the European war and warned both sides against encroachments on American interests.

Re-elected in 1916 as a peace candidate, he tried to mediate between the warring nations; but, when the Germans resumed unrestricted submarine warfare in 1917, Wilson brought the United States into what he now believed was a war to make the world safe for democracy. He supplied the classic formulations of Allied war aims; and the armistice of November, 1918, was negotiated on the basis of Wilson's Fourteen Points. In 1919 he strove at Versailles to lay the foundations for enduring peace.

He accepted the imperfections of the Versailles Treaty in the expectation that they could be remedied by action within the League of Nations. He probably could have secured ratification of the treaty if he had adopted a more conciliatory attitude toward the mild reservationists; but his insistence on all or nothing eventually caused the diehard isolationists and diehard Wilsonites to unite in rejecting a compromise.

In September, 1919, Wilson suffered a paralytic stroke which limited his future activity. After the presidency he lived on in retirement in Washington, dying February 3, 1924. He was married twice—in 1885 to Ellen Louise Axson, who died in 1914, and in 1915 to Edith Bolling Galt. A man of high principle, inspiring eloquence and great intellectual ability, Wilson was the first leader to fire the imagination of the masses of the world with the vision of world peace. The standard biography is by Baker.

WARREN GAMALIEL HARDING

was born in Warren County, Ohio, on November 2, 1865. After attending Ohio Central College, Harding became interested in journalism and in 1885 bought the *Marion (Ohio) Star*. In 1891 he married a wealthy widow, Florence Kling De Wolfe. As his paper prospered, he entered Republican politics, serving as state senator (1898-1902), and as lieutenant governor (1902-04). In 1910 he was defeated for governor but in 1914 was elected to the Senate. His reputation as orator made him keynoter in the 1916 convention.

When the 1920 Republican convention was deadlocked between Leonard Wood and Frank O. Lowden, Harding was made the dark-horse nominee on his solemn affirmation that there was no reason in his past that he should not be. Straddling the League question, Harding was elected easily, with 404 electoral votes to 127 for James M. Cox, his Democratic opponent. His cabinet contained some able men, but also some manifestly unfit for public office. Harding's own intimates were mediocre when they were not corrupt. The impending disclosure of scandals in the Interior and Justice departments and in the Veterans' Bureau, as well as political setbacks, profoundly worried him. On his return from Alaska in 1923, he died suddenly at San Francisco on August 2. A handsome and genial man, undiscriminating in his associates, lacking in political ideas or fortitude, Harding was totally unfitted for the presidency.

JOHN CALVIN COOLIDGE

was born in Plymouth Notch, Vermont, on July 4, 1872. An Amherst graduate, he went

into law practice at Northampton, Massachusetts, in 1898. He married Grace Anna Goodhue in 1905. He entered Republican state politics, becoming successively mayor of Northampton, state senator, lieutenant governor and, in 1918, governor. His conduct in regard to the Boston police strike in 1919 won him a somewhat undeserved reputation for decisive action and brought him the Republican vice-presidential nomination in 1920. After Harding's death Coolidge handled the Washington scandals with care and finally managed to save the Republican party from public blame for the widespread corruption.

In 1924 Coolidge won re-election without difficulty, getting 382 electoral votes to 136 for the Democrat, John W. Davis, and 13 for Robert M. La Follette running on the Progressive ticket. His second term, like his first, was characterized by deference to big business, indifference to the underprivileged and a general satisfaction with the existing economic order. He stated that he did not choose to run in 1928, but he may have hoped to be drafted anyway.

After his presidency, Coolidge lived quietly in Northampton, writing an unilluminating *Autobiography* and conducting a syndicated column. He died in Northampton, Massachusetts, on January 5, 1933. His dry, Yankee humor, his frugality and glumness made him a paradoxically popular President in the boom period. The standard biographies are by White and Fuess.

HERBERT CLARK HOOVER

was born at West Branch, Iowa, on August 10, 1874. A Stanford graduate, he worked from 1895 to 1913 as a mining engineer and consultant in North America, Europe, Asia, Africa and Australia. In 1899 he married Lou Henry. During the First World War he served with distinction as chairman of the American Relief Committee in London, as chairman of the Committee for Relief in Belgium and as United States Food Administrator. His political affiliation were still sufficiently indeterminate for him to be mentioned as a possibility for both Republican and Democratic nominations in 1920; but after the election he served both Harding and Coolidge as Secretary of Commerce.

In the election of 1928 Hoover received 444 electoral votes to 87 for Alfred E. Smith, the Democratic candidate. He soon faced the worst depression in the nation's history; but his attack upon it was hampered by his devotion to the theory that the forces which brought the crisis would soon bring the revival, and then by his belief that in too many areas the federal government had no power to act. In a succession of vetoes he struck down measures proposing a national employment

system or national relief; he reduced income tax rates; and only at the end of his term did he yield to popular pressure and set up agencies to make emergency loans (mostly to large business).

After his defeat in 1932, Hoover occupied himself with private business and with books and speeches attacking the New Deal. President Truman brought him back into official life by charging him in 1946 with various missions concerning the world food situation.

FRANKLIN DELANO ROOSEVELT

was born in Hyde Park, New York, on January 30, 1882. A Harvard graduate, he attended Columbia Law School and was admitted to the New York bar. In 1910 he was elected to the New York state senate as a Democrat. Re-elected in 1912, he was appointed Assistant Secretary of the Navy by Woodrow Wilson in 1913. In 1920 his radiant personality and his war services resulted in his nomination for Vice President as James M. Cox's running mate. After his defeat, he returned to law practice in New York. In August, 1921, Roosevelt was stricken with infantile paralysis while at Campobello, New Brunswick. After a long and gallant fight against the disease he recovered partial use of his legs. In 1924 and 1928 he led the fight at the Democratic national conventions for the nomination of Governor Alfred E. Smith of New York; and in 1928 Roosevelt was himself induced to run for governor of New York. He was elected and was re-elected in 1930.

In 1932 Roosevelt received the Democratic nomination for President and immediately launched a campaign which brought new spirit to a weary and discouraged nation. He won the election over Herbert Hoover by a margin of 472 to 59 in the electoral college. His first term was characterized by an unfolding of the New Deal program, with greater benefits for labor, the farmers and the unemployed, and the progressive estrangement of most of the business community.

At an early stage Roosevelt became aware of the menace to world peace involved in the existence of totalitarian fascism, and from 1937 on he tried to focus public attention on the trend of events in Europe and Asia. As a result he was widely denounced as a warmonger. He was re-elected in 1936 over Alfred M. Landon by the overwhelming electoral margin of 523 to 8; and the gathering international crisis caused him to decide to run again in 1940, when he defeated Wendell L. Willkie, 449 to 82.

Roosevelt's program to bring maximum aid to Britain and, after June, 1941, to Russia was bitterly opposed by a small but organized minority, until the Japanese

attack on Pearl Harbor restored national unity. During the war Roosevelt shelved the New Deal in the interests of conciliating the business community, both in order to get full production during the war and to prepare the way for a united acceptance of the peace settlements after the war. A series of conferences with Winston Churchill and Joseph Stalin laid down the bases for the postwar world. In 1944 he was elected to a fourth term, with 432 electoral votes to 99 for Governor Thomas E. Dewey.

On April 12, 1945, Roosevelt died at Warm Springs, Georgia, shortly after his return from the Yalta Conference. His wife, Anna Eleanor Roosevelt, whom he married in 1905, is a woman of great ability who made significant contributions to her husband's policies. No President has been faced with so many staggering responsibilities, both at home and abroad, as Franklin Roosevelt. His success in bringing America safely through the greatest depression and the greatest war in world history was an accomplishment of the highest statesmanship; and his buoyant, fighting personality has left an indelible impression upon the national imagination.

HARRY S. TRUMAN

was born on a farm near Lamar, Missouri, on May 8, 1884. During the First World War he served in France with the 129th Field Artillery. After engaging briefly and unsuccessfully in the haberdashery business in Kansas City, Truman entered local politics. Under the sponsorship of Thomas Pendergast, Democratic boss of Missouri, he held a number of local offices, preserving his personal honesty in the midst of a notoriously corrupt political machine. In 1934 he was elected to the Senate and was re-elected in 1940. During his first term he was a loyal but quiet supporter of the New Deal; but in the course of his second term, an appointment as head of a Senate committee to investigate war production brought to the surface his special qualities of honesty, common sense and hard work, and he won widespread respect.

When opposition developed to the re-nomination of Henry Wallace for Vice President in 1944, Roosevelt, who doubtless had in mind the importance of conciliating the Senate for the ratification of the peace settlement, indicated that Truman would be acceptable. Since Roosevelt's death, Truman has nominally sought to continue the Roosevelt policies, but the New Dealers in the key Washington jobs have gradually been replaced by politicians and businessmen in a more orthodox tradition, many of them hailing from Missouri. Truman married Bess Wallace in 1919.

1947 U. S. Cabinet Personnel

Department of State

Secretary—George C. Marshall
Undersecretary—Robert A. Lovett
Counselor—Charles E. Bohlen
Undersecretary (for Economic Affairs)—William L. Clayton
Assistant Secretary (for Administration)—John E. Peurifoy.
Assistant Secretary (for Public Affairs)—Howland H. Sargeant (acting)
Assistant Secretary (for Political Affairs)—Norman Armour.
Assistant Secretary (for Occupied Areas)—Charles E. Saltzman.

Department of the Treasury

Secretary—John W. Snyder.
Undersecretary—Archibald L. M. Wiggins.
Assistant Secretary—Edward H. Foley, Jr.

Department of National Defense

Secretary—James Forrestal
Secretary of the Army—Kenneth C. Royall.*
Secretary of the Navy—John L. Sullivan.*
Secretary of the Air Force—W. Stuart Symington.*

Department of Justice

Attorney General—Tom C. Clark.
Solicitor General—Philip B. Perlman.
Assistant to the Attorney General—Douglas W. McGregor.

Assistant Solicitor General—George T. Washington.

Post Office Department

Postmaster General—Jesse M. Donaldson
Executive Assistant to the Postmaster General—Frank Pace, Jr.

Department of the Interior

Secretary—Julius A. Krug.
Undersecretary—Oscar L. Chapman.
Assistant Secretary—William E. Warne.
Assistant Secretary—C. Girard Davidson.

Department of Agriculture

Secretary—Clinton P. Anderson.
Undersecretary—Norris E. Dodd.
Assistant Secretary—Charles F. Brannan.

Department of Commerce

Secretary—W. Averell Harriman.
Undersecretary—William C. Foster.
Assistant Secretary—David K. E. Bruce.
Assistant Secretary (for Air)—John R. Alison.

Department of Labor

Secretary—Lewis B. Schwellenbach.
Undersecretary—David A. Morse.
Assistant Secretary—John W. Gibson.
Assistant Secretary—Philip Hannah.

*Although these Secretaries do not have cabinet rank, they have the right of direct access to the President.

Presidential Succession

Under the Constitution, the Vice President is next in line for the Presidency; and, according to the Presidential Succession Act of 1886, the Vice President was to be followed by the Secretary of State, Secretary of the Treasury, Secretary of War, Attorney General, Postmaster General, Secretary of the Navy, and Secretary of the Interior in that order, provided they were constitutionally eligible. The Secretaries of Agriculture, Commerce and Labor were not included since their posts had not yet been created.

On July 18, 1947, President Truman

signed a bill making the Speaker of the House next in line after the Vice President, to be followed by the Senate President pro tempore, provided both are constitutionally eligible. They are followed by the cabinet members in the same order provided by the Act of 1886, with the Secretaries of Agriculture, Commerce and Labor added in that order after the Secretary of the Interior. Under the National Security Act of 1947, signed July 26, 1947, the new Secretary of Defense, replacing the Secretaries of War and the Navy, is third in the succession line in the cabinet.

Presidents of the United States Who Died in Office

Name	Date	Cause
1. William Henry Harrison	April 4, 1841	Pneumonia
2. Zachary Taylor	July 9, 1850	Typhus fever
3. Abraham Lincoln	April. 14, 1865	Assassinated by John Wilkes Booth
4. James A. Garfield	Sept. 19, 1881	Assassinated by Charles J. Guiteau
5. William McKinley	Sept. 14, 1901	Assassinated by Leon F. Czolgosz
6. Warren G. Harding	Aug. 2, 1923	Pneumonia
7. Franklin D. Roosevelt	Aug. 12, 1945	Cerebral hemorrhage

HOW A PRESIDENT IS ELECTED

Selection of Delegates

NOT A WORD APPEARS IN THE CONSTITUTION about nominating a candidate for President, but hardly has one Chief Executive been inaugurated before the country begins its great national guessing game—who are likely to be the candidates by the time of the next presidential election?

Actually the eventual choice of a candidate involves ponderous machinery. First, at full dress meetings some months before, the national committees decide the time and place of the conventions. Before the conventions meet each party selects delegates from every state and territory.

The Democrats allow each state twice as many delegates as the state has senators and representatives; the party has allowed four additional delegates from each state that went Democratic in the election of 1944. The Democrats also allow six delegates each to Puerto Rico, the District of Columbia, Alaska, Hawaii and the Canal Zone and two to the Virgin Islands.

The Republicans allot each state four delegates-at-large and two each for each Representative-at-large, as well as three additional delegates if the state went Republican in the previous presidential or senatorial election. In addition, each congressional district within the state that cast 1,000 Republican votes at the last election is permitted a delegate, with an additional delegate if that district cast 10,000 votes. The Republicans further allot two delegates to Puerto Rico and three to the District of Columbia; Alaska and Hawaii also get three delegates plus two if the territorial delegate to Congress is Republican.

Each party provides for the selection of an equal number of alternates to serve in the absence of regular delegates. Delegates are chosen differently in different states, mostly by party primary but in some cases by party conventions.

The Conventions

At each convention a temporary chairman is chosen, usually to deliver the party's keynote speech. After a credentials committee seats the various delegates, a permanent chairman is elected. The convention then votes on a platform, drawn up by the platform committee.

By the third or fourth day, presidential nominations begin. The chairman calls the roll of states alphabetically. A state may place a candidate in nomination or yield to another state.

Voting, again alphabetically by voice vote, begins after all nominations have

The Conventions, (cont.)

been made and seconded. A simple majority is required in each party, although this may require many ballots. Then, the vice presidential candidate is selected; he must come from a different state, since electors must vote for a President or a Vice President (either one) not a resident of his own state. A President and Vice President must not come from one state.

The Electoral College

The next step in the process is the nomination of electors in each state, according to its laws. These electors must not be federal office holders. In the November election, the voters cast their votes for electors, not for President. In some states, the ballots include only the names of the presidential and vice presidential candidates; in others, they include only names of the electors. Nowadays, it is practically impossible for electors to be split between parties. It last occurred in West Virginia in 1916. On several occasions, the candidate with the largest popular vote nationally failed to obtain the necessary majority of the electoral vote.

Each state has as many electors as it has United States Senators and members of the House of Representatives. There are 96 Senators and 435 Representatives, a total of 531 electoral votes, of which 266 are needed to win.

On a designated day in December, the electors cast their votes in their respective state capitols. Constitutionally they may vote for someone other than the party candidate but practically they cannot since they are pledged to one party and its candidate on the ballot. Should the presidential or vice presidential candidate die during the interval between the November popular vote and the December meetings, new choices may be made to fill the tickets by the national committees or by conventions called by them. The votes of the electors, certified by the states, are sent to Congress where the President of the Senate opens the certificates and has them counted in the presence of both Houses in January. The new President is inaugurated at noon on January 20.

Should no candidate receive a majority of the electoral vote for President, the House of Representatives chooses a President from among the three highest candidates, voting, not as individuals, but as states, with a majority (now 25) needed to elect.

Should no vice presidential candidate obtain the majority, the Senate, voting as individuals, chooses from the highest two.

DON'T STAY HOME ON ELECTION DAY!

by GEORGE GALLUP

Director, Institute of Public Opinion

ONE OF THE SCANDALS OF OUR American democracy is the shamefully low voter turnout on election day. Voting is an easy process—practically just walking across the street to cast your ballot. But a lot of people don't seem to think voting is important.

It is sad but true that a greater proportion of the eligible population voted forty years ago than votes today, even though it was harder to vote in those days because many people had to travel by horse and buggy to get to the polling places. In the presidential election of 1900, 75 percent of the eligible voters cast ballots. By contrast, in 1944 only 55 percent voted.

Illinois, New Hampshire and New York had the best voting rate of all the states in 1944, while Mississippi, Alabama and South Carolina brought up the rear. The national average is lowered by the fact that most Southern Negroes don't vote. But there's a bigger reason, too, for the low turnout. It is apathy. Many of us just don't take the trouble to exercise our democratic right to vote.

For one of the world's leading champions of democracy, the United States compares very poorly with other countries in election-day turnout. Our voting rate is lower than that in any large democracy which has held an election recently. We rank far behind Australia, France, England and Canada, and even behind Italy, where the first democratic election after two decades of fascist control was held in 1946. France and Italy lead the list in high voter turnout in elections since the end of World War II, with 80 percent or more of the eligible voters participating. Britain and Canada rank next with 76 and 74 percent respectively. In the United States, which brings up the rear, only just a little more than half of the adult citizens took the trouble to vote in 1944.

Worse still is the record in the 1942 congressional election. That was held less than a year after Pearl Harbor and it came at a time when the country was facing probably the most pressing problems in all our

history—facing, indeed, a struggle for our very existence. Yet only one-third of the nation's adult citizens took the trouble to vote.

How the U. S. Compares with Other Nations*

Country and (election)	Eligible voters	Vote cast	Pct. of eligible voters
Italy (Monarchy referendum, 1946) ..	33,500,000	29,935,000	.89
France (Constituent Assembly, 1946) ..	25,000,000	20,323,000	.81
Britain (General election, 1945)	33,000,000	24,982,000	.76
Canada (General election, 1945)	6,952,000	5,155,000	.74
U. S. (Pres. election, 1944)	88,100,000†	48,000,000	.55
U. S. (Cong. election, 1946)	91,700,000†	34,400,000	.38

*Estimated figures. †Census Bureau estimate of total number of adult citizens.

In Australia, voting in federal elections is compulsory. A fine is levied on those who don't show up. The turnout in the 1943 general election was over 90 percent.

Political Effects of Low Turnout

The low turnout in the United States not only shows a lack of public interest in the government, but also has far-reaching political repercussions.

Often the outcome of an election is determined quite as much by those who stay at home as by those who go to the polls and vote. The stay-at-homes in the recent past have been mostly Democrats in the lower economic levels. The whole political picture of the United States might be changed if they turned out and voted in full strength. If there had been a full turnout in 1942, there would have been no appreciable change in seats in the House and no gain in Republican seats.

There are several reasons for low turnout besides apathy. In general, voters have to go to more trouble to vote in this country than in Britain, France or Canada. Here many states and communities make no arrangements for permanent registration, but require voters to register each time there is an election. Some forget to register and that cuts the vote down.

Poll taxes and local customs in the

South discourage not only Negroes but some poor whites from voting. Also, interest in general elections in the South is small because, with only one strong party, the contests are usually settled in primaries, not in general elections.

Voting Participation in 1900 and 1940 Presidential Elections

(Male Suffrage in 1900 and Equal Suffrage in 1940)

	Year	Potential voting pop.	Pres. vote	Voting rate, pct.
All U. S.	1900	18,605,000	13,964,000	.75
All U. S.	1940	79,388,000	49,901,000	.63
Southern States ..	1900	4,862,000	2,346,000	.48
Southern States ..	1940	19,698,000	6,554,000	.33
Northern States ..	1900	13,743,000	11,617,000	.85
Northern States ..	1940	59,690,000	43,347,000	.73

How You Can Forecast Election Turnout

Statisticians who work with election figures have discovered a fairly accurate way of telling in advance how many people are likely to vote in a national election.

They have found that there is a more or less steady ratio between total voter turnout for the nation and total registrations in New York City during registration week, which takes place about a month before

each election. Analysis of a great number of elections has shown that the national turnout is between 13 and 17 times larger than the New York City registration.

Therefore, if you multiply the New York registration figure by 13 to 17 you should get fairly close to what the total turnout will be for the nation the following month.

These registration figures have been extremely reliable over a 12-year period in forecasting the national vote. The reason is that since New Yorkers are required to register for every election (with no permanent registration permitted), each registration is a fairly good index of the amount of public interest in a coming election.

Comparison of New York City Registration and National Vote

Year	New York City registration	National vote	No. of times N.Y.C. divides into Natl. vote
1932	2,339,000	39,750,000	17.0
1934	1,977,000	32,487,000	16.4
1936	2,900,000	45,648,000	15.7
1938	2,433,000	36,224,000	14.9
1940	3,390,000	49,901,000	14.7
1942	2,145,000	28,043,000	13.1
1944	3,217,000	45,400,000	14.1

NOTE: Vote is for President in presidential years; for Congress in mid-term years.

The Labor Vote, 1936-1944

(Based on Surveys)

Non-manual workers are not included among the labor union members whose vote is shown.

From 1936 to 1944, Democratic strength in presidential elections has been consistently greater among union members than among manual workers who were not in unions.

Among the labor union members a somewhat greater proportion of voters from C.I.O. unions favored the Democratic party than was the case among members of A.F.L. unions.

Union Labor Vote vs. Non-Union Labor Vote

Year	Percent Democratic of major party vote	
	Union members	Non-union labor
1936	80	72
1940	72	64
1944	72	56

Comparison of Electoral Vote and Popular Vote Percentages, 1900-1944

Year	% Democratic of electoral vote		% Democratic of popular major party vote	
1900	34.7		47.6	
1904	29.4		40.0	
1908	33.5		45.5	
1916	52.2		51.7	
1920	23.9		36.1	
1928	16.4		41.2	
1932	88.9		59.2	
1936	98.5		62.5	
1940	84.6		55.0	
1944	81.4		53.8	

In 1912 and 1924 the comparisons are as follows: (1912 the Progressive candidacy was that of Theodore Roosevelt; in 1924 of LaFollette).

	Electoral vote percentage			Popular vote percentage		
	Dem.	Rep.	Prog.	Dem.	Rep.	Pro
1912	81.9	1.5	16.6	45.3	25.1	29.6
1924	25.6	72.0	2.4	29.0	54.3	16.7

How Voters Classified Themselves Politically, 1940 and 1944

	1944		1940	
	%	Number	%	Number
As Democrats	41	18,500,000	41	20,500,000
As Republicans	39	17,500,000	38	19,000,000
As Independents	20	9,000,000	20	10,000,000
As Socialists, or others	*	*	1	500,000

*Number amounted to less than 1% of the total, or less than 500,000 total.

A.F.L. Vote vs. C.I.O. Vote

Percent Democratic of major party vote
A.F.L. members C.I.O. members

1936	80	85
1940	71	79
1944	69	78

Percentage of Population Voting, Presidential Elections 1920-1940

	Est. total pop.	Total presidential vote	% of pop. voting
1920 ..	105,710,620	26,746,878	25
1924 ..	114,113,000	29,090,926	25
1928 ..	120,501,000	36,818,081	31
1932 ..	124,840,000	39,750,162	32
1936 ..	128,053,000	45,648,090	36
1940 ..	131,669,275	49,901,835	38

1944 not compared on same basis because of number in armed forces.

How "Independents" Voted in 1940 and 1944

	1944		1940	
	%	Number	%	Number
Democratic	62	5,500,000	61	6,000,000
Republican	38	3,500,000	39	4,000,000

Vote for Minor Parties in Presidential Elections, 1900-1944

Minor parties since 1900 have, with the exceptions of the Bull Moose party led by Theodore Roosevelt in 1912, and the Progressive party of Robert M. LaFollette in 1924, never amassed any large number of votes in national elections.

Year	All parties	Minor parties	Percent of total
	Vote cast	Vote cast	
1900	13,956,672	391,210	2.8
1904	13,523,632	816,389	6.0
1908	14,886,452	800,682	5.4
1912	15,036,442	5,258,467	35.0
Roosevelt		(4,119,507)	(27.4)
Others		(1,138,960)	(7.6)
1916	18,532,708	864,881	4.7
1920	26,746,878	1,458,765	5.5
1924	29,090,926	4,979,407	17.1
LaFollette		(4,822,856)	(16.6)
Others		(156,551)	(0.5)
1928	36,818,081	367,640	1.0
1932	39,750,162	1,166,862	2.9
1936	45,648,090	1,216,581	2.7
1940	49,901,835	239,274	0.5
1944	47,974,868	354,630	0.7

Sources: The totals from 1900 to 1924 are taken from the Pennsylvania Manual, 1943 edition. From 1928 to 1944 the results are those collected from state sources by the American Institute of Public Opinion.

Voting Participation in 1900 and in 1940 Presidential Elections

Male Suffrage in 1900, and Equal Suffrage in 1940

		Potential voting pop.	Total presidential vote	Voting rate percent

*City figures not available; county figures used since city comprises majority of county population.

MOST REPUBLICAN COUNTY. McIntosh County, North Dakota, on the southern boundary of the State, was the most Republican county in 1944. This county, after going Democratic in 1932 by nearly 7 to 1, turned around and went Republican eight years later by more than 10 to 1. The 1944 vote: Dewey, Rep., 92.2% of the major party vote; Roosevelt, Dem., 7.8%.

MOST DEMOCRATIC BIG CITY. Fort Worth, Texas, had the highest proportion of Democratic votes in 1944 of any city of over 100,000 population. Roosevelt polled 90.4% of the major party vote. Outside the South, Camden, New Jersey, was the most Democratic big city in the 1944 presidential election, with a Democratic vote of 77.2%.

THE CABINET

BY ARTHUR M. SCHLESINGER, JR.

Adapted from *The Congressional Directory*.

STATE. The Secretary of State has the principal responsibility, under the President, for the determination of the policy of the government in relation to international problems. He is charged with the conduct of negotiations pertaining to the protection of American rights and interests throughout the world, and the promotion of beneficial intercourse between the United States and other countries. He also performs certain domestic duties, such as having custody of the seal of the United States and publishing the laws enacted by Congress.

TREASURY. The Secretary of the Treasury is charged by law with the management of the national finances. He superintends the collection of the revenue; grants warrants for money drawn from the Treasury in pursuance of appropriations made by law, and for the payment of moneys into the Treasury; directs the forms of keeping and rendering public accounts; prepares plans for the improvement of the revenue and for the support of the public credit; and submits a report annually to Congress on the condition of the public finances, and the results of activities under his supervision, which include, among others, the coinage and printing of money, and the administration of the Coast Guard, Narcotics and Secret Services.

DEFENSE. The Secretary of Defense is responsible for supporting and defending the Constitution against all enemies, either foreign or domestic, and maintaining, by timely and effective military action, the security of the United States and its possessions and areas vital to its interest. He is charged with advancing the national policies and interests of the United States, and with safeguarding internal security as directed by higher authority. For these purposes, he may conduct integrated military operations on the land, on the sea, and in the air.

JUSTICE. The Attorney General is the chief law officer of the Federal Government. He represents the United States in legal matters generally and gives advice and opinions when requested by the President or by the heads of the executive departments. He appears in the Supreme Court in cases of exceptional importance, exercises general superintendence over United States district attorneys and marshals in the various judicial districts, and provides special counsel for the United States when the character of the interests involved requires such action. The Federal Bureau of Investigation and the Bureau of Prisons are under his direction.

POST OFFICE. The Postmaster General is executive head of the Postal Service. Subject to approval of the President, he makes postal treaties with foreign governments.

INTERIOR. The Secretary of the Interior has the primary task of developing and conserving the natural resources of the United States and its territories for this and future generations. He is charged with the supervision of public business relating to such offices as the General Land Office, Bureau of Reclamation, Geological Survey, Office of Indian Affairs, National Park Service, Bureau of Mines, Division of Territories and Island Possessions, etc.

AGRICULTURE. The Secretary of Agriculture is charged with acquiring and diffusing among the people of the United States useful information on subjects connected with agriculture in the most general and comprehensive sense of the term. For that purpose he conducts a comprehensive research and educational program. He is also required to administer many other Federal laws which relate to marketing and distribution of agricultural products; the regulation of interstate commerce in food, fiber and related products; the protection and management of the national forests, farm credit, agricultural adjustment, conservation and land use, farm tenancy, and rural rehabilitation and electrification.

COMMERCE. The Secretary of Commerce directs such activities as population, agriculture and other censuses; collection, analysis and dissemination of commercial statistics; promotion of foreign and domestic commerce; coastal and geodetic surveys; establishment of commodity weights, measures, and standards; supervision of the issuance of patents and the registration of trade marks; maintenance of aids to air navigation; development of inland waterway transportation.

LABOR. The Secretary of Labor is charged with the duty of fostering, promoting and developing the welfare of the wage earners of the United States, improving their working conditions, and advancing their opportunities for profitable employment. He has the power to act as mediator and to appoint commissioners of conciliation in labor disputes whenever in his judgment the interests of industrial peace may require it to be done. He directs the collection and collation of statistics concerning conditions of labor; the promulgation and enforcement of certain maximum hour, minimum wage, child labor, safety and health stipulations in connection with Government supply contracts; the investigation of matters pertaining to children.

*In session until July 10, 1924. †Nominated on 103d ballot.

National Committee Chairmen, 1900-47

Democratic

Years served	Chairman and state
1900-04...	James K. Jones, Ark.
1904-08...	Thomas Taggart, Ind.
1908-12...	Norman E. Mack, N. Y.
1912-16...	William F. McCombs, N. Y.
1916-20...	Vance C. McCormick, Pa.
1920-28...	Cordell Hull, Tenn.
1928...	Clem Shaver, W. Va.
1928-32...	John J. Raskob, Md.
1932-44...	James A. Farley, N. Y.
1944-47...	Robert E. Hannegan, Mo.
1947...	J. Howard McGrath, R. I.

Republican

Years served	Chairman and state
1900-04...	M. A. Hanna, Ohio
1904...	Henry C. Payne, Wis.
1904-07...	George B. Cortelyou, N. Y.
1907-08...	Harry S. New, Ind.
1908-09...	Frank H. Hitchcock, Mass.
1909-12...	John F. Hill, Me.
1912...	Victor Rosewater, Nebr.
1912-16...	Charles D. Hilles, N. Y.
1916-18...	William R. Willcox, N. Y.
1918-21...	Will Hays, Ind.
1921-24...	John T. Adams, Iowa
1924-28...	William M. Butler, Mass.
1928-29...	Hubert Work, Colo.
1929-30...	Claudius H. Huston, Tenn.
1930-32...	Simeon D. Fess, Ohio
1932-34...	Everett Sanders, Ind.
1934-36...	Henry P. Fletcher, Pa.
1936-40...	John Hamilton, Kans.
1940-42...	Joseph W. Martin, Jr., Mass.
1942-44...	Harrison E. Spangler, Iowa
1944-46...	Herbert Brownell, Jr., N. Y.
1946...	Carroll Reece, Tenn.

House of Representatives Elections, 1928-1944

Comparison of Seat Distribution and Division of the Major Party Vote

	No. of seats			Democratic percentage of major party seats and major party vote	
	Dem.	Rep.	Other parties	Seats	Popular vote
1928	164	270	1	37.8	42.6
1930	214	220	1	49.3	45.9
1932	313	117	5	72.8	56.6
1934	322	103	10	75.8	56.8
1936	333	89	13	78.9	58.5
1938	262	169	4	60.8	50.8
1940	267	162	6	62.2	53.1
1942	222	209	4	51.5	47.6
1944	243	190	2	56.1	52.2

Division of seats is on the basis of the general election results each year. After the 1930 elections the Republican party lost control of the House through deaths.

¹Date set by party authority. ²Candidate nominated by state party convention. ³Primary for county officer and members of legislature held in odd years. ⁴No primary in 1948. ⁵Date not yet officially set. ⁶New primary law enacted in 1947; procedure not yet determined.

ELECTION RESULTS, 1789 to 1944

Candidates for President and Vice President

The Constitution does not provide for the popular election of either the President or Vice President. It merely states that they shall be chosen by electors who shall be chosen in a manner prescribed by the state legislatures. No set of popular vote returns is complete or entirely significant until 1872, because that was the first election in which all electors were chosen by popular vote. By referring to the returns in 1876 and 1888, it can be seen that the candidate with the largest number of votes need not necessarily be elected.

1789 to 1800

Year	Presidential candidates	Party	Electoral vote	Year	Presidential candidates	Party	Electoral vote
1789 ^{1,2}	George Washington	No party	69	1796 ¹	John Adams	Fed.	71
	John Adams	No party	34		Thomas Jefferson	Dem.-Rep.	68
	Scattering	No party	35		Thomas Pinckney	Fed.	59
	Votes not cast		4		Aaron Burr	Dem.-Rep.	30
1792 ¹	George Washington	Fed.	132		Scattering		48
	John Adams	Fed.	77	1800 ^{1,3}	Thomas Jefferson	Dem.-Rep.	73
	George Clinton	Anti-Fed.	50		Aaron Burr	Dem.-Rep.	73
	Thomas Jefferson	Anti-Fed.	4		John Adams	Fed.	65
	Aaron Burr	Anti-Fed.	1		Charles C. Pinckney	Fed.	64
	Votes not cast		3		John Jay	Fed.	1

¹In all elections prior to 1804, the candidate with the greatest number of electoral votes was President and the next highest was Vice President. Hence Washington became President and Adams Vice President.

²The N. Y. legislature chose no electors. N. Carolina and Rhode Island had not yet ratified the Constitution.

³Since Jefferson and Burr were tied, the House of Representatives chose the President. In a vote by states, 0 votes were cast for Jefferson, 4 for Burr and 2 were not cast.

1804 to 1868

				Francis P. Blair, Jr.	Democratic	80
				Votes not counted		23

¹First election in which President and Vice President were voted on separate ballots.

²Since no candidate had a majority of the electoral vote, the House of Representatives had to select President from the first three, voting as states. Thirteen votes were cast for Adams, 7 for Jackson, and 4 for Crawford. ³The Antimasonic Party in 1831 was the first party to hold a nominating convention to choose candidates for President and Vice President. ⁴Since Johnson did not have a majority of the electoral votes, the Senate chose him over Granger, the others being legally out of the race. ⁵John Tyler became President upon the death of William H. Harrison on April 4, 1841. ⁶Millard Fillmore became President upon the death of Zachary Taylor on July 9, 1850. ⁷Andrew Johnson became President upon the death of Abraham Lincoln April 15, 1865. ⁸23 Southern electoral votes were excluded.

1872 to 1944

¹Horace Greeley died on Nov. 29, 1872, before his electors voted, and his 63 votes were scattered among several candidates. This was the first election in which every state chose its electors by popular vote.

²This election was disputed because of a double set of returns from La., S. C., Oreg., and Fla. A special electoral commission of 5 Supreme Court Justices, 5 Representatives and 5 Senators decided that the Republican electors were the men legally chosen.

³Chester A. Arthur became President on death of James A. Garfield on Sept. 19, 1881.

⁴Theodore Roosevelt became President on death of William McKinley on Sept. 14, 1901.

⁵James S. Sherman, Republican candidate for Vice President, died on Oct. 30, and the Republican National Committee named Nicholas Murray Butler as vice presidential candidate in his stead.

⁶Calvin Coolidge became President on death of Warren G. Harding on August 2, 1923.

⁷Succeeded to the Presidency upon the death of Franklin D. Roosevelt on April 12, 1945.

Voters and Voting Percentages in Presidential Elections, 1824–1944

Year	Estimated no. of voters	Estimated population*	Voting percentage	Year	Estimated no. of voters	Estimated population*	Voting percentage

*LaFollette, Progressive and Socialist candidate, 13 electoral votes.

Congress

Representatives Under Each Apportionment

Source: The Congressional Directory.

Note.—The apportionment based on the Sixteenth Census (1940) distributes the 435 seats in the House among the States according to the method of equal proportions. By this method the percent difference between the average number of Representatives per million people in any 2 States is made as small as possible. Also, the percent difference between the average districts, i. e., the average number of persons per Representative, in any 2 States is made as small as possible. By equalizing the representation of all pairs of States, the method gives as nearly equal representation as possible to all States in proportion to their population.

State	Constitutional apportionment	First Census, 1790	Second Census, 1800	Third Census, 1810	Fourth Census, 1820	Fifth Census, 1830	Sixth Census, 1840	Seventh Census, 1850	Eighth Census, 1860	Ninth Census, 1870	Tenth Census, 1880	Eleventh Census, 1890	Twelfth Census, 1900	Thirteenth Census, 1910*	Fifteenth Census, 1930	Sixteenth Census, 1940

Linn Boyd	32-33	1851-1855	Joseph W. Martin, Jr. (Mass.)	80	1947-
Nathaniel P. Banks (Mass.)	34	1855-1857			

¹George Dent (Md.) was elected Speaker pro tempore for Apr. 20 and May 28, 1798.²Resigned during 2d session of 13th Congress.³Resigned between 1st and 2d sessions of 16th Congress.⁴Resigned during 1st session of 23d Congress.⁵Elected Speaker and served the day of adjournment.⁶Died between 1st and 2d sessions of 44th Congress. During 1st session, there were two Speakers pro tempore: Samuel S. Cox (N. Y.), appointed for Feb. 17, May 12 and June 19, 1876; and Milton Saylor (Ohio), appointed for June 4, 1876.⁷Died during 2d session of 74th Congress. ⁸Died during 3d session of 76th Congress.

VOTERS. The county with the greatest number of voters is Cook County, Illinois, which contains the city of Chicago. In 1944, Cook County had a greater total of Democratic and Republican voters (2,200,026) than any single state, except New York, Illinois, Pennsylvania, Ohio, and California. Despite the fact that 58% of the voters in the county were Democrats, only six states (outside of Illinois) had more Republican voters.

New York City, which contains five counties, had more voters in the two major parties than any state (outside of New York), except Pennsylvania, Illinois, and California. One of its five counties, Queens, was the largest county in the country carried by the Republican ticket in 1944.

AS GOES MAINE. The old saw, "As goes Maine, so goes the nation," has probably gained currency only because Maine is now the only state to hold its general elections in September, prior to the election for president in November. As the following table shows, the September Maine elections are not even a good guide to Maine's own vote in the presidential elections in recent years:

	% Democratic of major party vote Governor (Sept.)	President (Nov.)
1928	30.7	31.1
1932	50.5	43.6
1936	42.9	42.8
1940	36.1	48.8
1944	29.7	47.5

Henry. ¹¹Does not have a vote.¹²Popular Democrat. Appointed Sept. 11, 1946, to fill vacancy in term ending Jan. 3, 1949, caused by resignation of Jesús T. Piñero. ¹³Vacancy caused by resignation of Evan Howell.¹⁴Elected Nov. 4, 1947, to fill vacancy caused by resignation of Leo F. Rayfield.

Congressional Committees

Source: Congressional Directory.

Under the Legislative Reorganization Act of 1946, the number of standing committees of the Senate was reduced from thirty-three to fifteen, and committees of the House of Representatives from forty-five to nineteen. This reduction became effective January 3, 1947, the opening date of the 80th Congress.

Vermont.....	2	8,000	30	246	2	2	Biennial	none	\$600, per 2 years
Virginia.....	4*	10,000	40	100	4	2	Biennial	60 days	\$720 per session
Washington.....	4	6,000	46	99	4	2	Biennial	60 days	\$5 per day and mileage
West Virginia.....	4*	10,000	32	94	4	2	Biennial	60 days	\$500 per year
Wisconsin.....	2	10,000	33	100	4	2	Biennial	none	\$2,400 per session
Wyoming.....	4	8,000	27	56	4	2	Biennial	40 days	\$12 per day

*Not eligible to succeed himself. †First Wednesday after first Monday in June following organization.

‡Unicameral legislature. §Under an Amendment to the State Constitution passed in the election of 1947, the Legislators are permitted to fix their own salaries above this figure.

MOST DEMOCRATIC COUNTY. Armstrong County, South Dakota, an unorganized county (part of an Indian reservation) on the Missouri River was the most Democratic county in 1944. Four votes were reported cast, all for Franklin D. Roosevelt.

MOST REPUBLICAN BIG CITY. Fort Wayne, Indiana, was the most Republican of the cities which had more than 100,000 population. The Republican presidential ticket polled 56.9% of the major party vote.

¹Registration is required in all states except Arkansas and North Dakota. ²Although poll or head taxes are levied in several other states, those listed here make payment of the tax a condition for voting. ³Georgia and South Carolina's minimum voting age is 18. In all other states the minimum age is 21.

CONGRESSIONAL APPORTIONMENT

Four States—Delaware, Nevada, Vermont and Wyoming—have one Congressman each, the minimum guaranteed each state by the Constitution. In the remaining states there is, on the average, one Congressman for each 301,669 people, as enumerated in the census of 1940.

Not all congressional districts approach this average figure, however, due to uneven districting, or failure to redistrict within the state. Fifteen districts had enough people in 1940 to warrant two Congressmen in 1944.

The two most conspicuous examples of differences in size are the Fifth and the Seventh Districts in Illinois, both in the Chicago area. The 1940 population of the Fifth District was 112,116, and of the Seventh District 914,053. The smallest congressional district in the country, however, is the State of Nevada, with 110,247 people in 1940, which elects one Congressman by virtue of the Constitutional requirement of at least one member of the House for each State.

REVIEW OF THE YEAR

WASHINGTON AT HOME AND ABROAD

by

ELMER DAVIS

News Analyst for the American Broadcasting Company,
former Director of the O.W.I.

THE WASHINGTON year usually begins on the day after election. But the last Election Day commenced not merely a new year but a new era in the opinion of Senator Taft, who said next morning, "For the first time in fourteen years the United States is no longer in a state of emergency." The history of 1947 could be summed up as a demonstration that Mr. Taft was mistaken; together with the gradual recognition of that fact, however late and reluctant, by the leaders of Congress including Mr. Taft himself. If there had been nothing but domestic affairs to worry about he might have been right; but it was a year of deepening crisis abroad, which eventually backfired on the domestic economy.

The leaders of the new Congress, with a Republican majority in both Houses, had not foreseen that; they came in behaving as if they thought the country had gone back to normalcy (though they avoided that ill-omened word). In their opinion the primary duties of the new Congress were to enact a more stringent labor-relations law; to reduce government expenditures; and to provide relief for the American taxpayer, whom some regarded as the most miserable of all God's creatures in a suffering world. They stood by tax reduction to the end—a policy twice thwarted by presidential vetoes which were barely sustained; they passed a labor-relations law which, on the basis of early experience, seemed likely to disappoint both the hopes of its sponsors and the fears of its opponents; they made some modest reductions in government expenditures but they gave Congressional approval to new policies, and new expenditures, that could not have been foreseen when Congress met. Nothing is harder for public men than to realize that the premises on which they had based their policy were mistaken, but this Congress did that. The recognition was implicit, not explicit. It came hard, but Congress finally did recognize at least the most important facts of the situation, and did what had to be done in its opening session.

None of which was in prospect just after election, when the President's prestige was at low-water mark and leaders of the new Congress were promising to start each day's session with a prayer and end with a probe. (Such probes as were eventually started came to little; the prayers may have been more efficacious.) President and Congressional leaders, just after the election, had promised cooperation in all matters involving the national welfare; but, as expected, there turned out to be considerable argument later as to where the line fence ran between national welfare and partisanship. But before Congress met, the President, with the aid of Secretary of the Interior Krug, had regained a good deal of his lost prestige by taking on, and licking, John L. Lewis.

The government was still operating the coal mines; Mr. Lewis had signed a contract with it in the previous May; but just before election he decided that the contract had been "breached" by government action, and in due course so notified his United Mine

Workers, trained in the doctrine of "no contract, no work." A Federal court ordered him to revoke his notice; he did not, and his miners went out anyway. Whether the contract had in fact been broken has not been determined even yet; what the courts eventually held was that Mr. Lewis had no right to make that determination by his own fiat. He and his union were tried for contempt of court and found guilty; he was fined ten thousand dollars and the union was fined a quarter of a million for each day of the strike. With that he called it off pending appeal to the Supreme Court; which in due course affirmed the verdict, though with a sharp reduction in the union's fine.

Not since Firpo for a moment knocked Dempsey out of the ring had there been such an upset. Dempsey eventually came back and so may Lewis; but for the moment Lewis had gone down, and Truman correspondingly went up. Early in January he further strengthened himself by filling the vacancy left by the resignation of Secretary of State Byrnes with the appointment of General Marshall, whom the President called the greatest living American and whose selection was universally applauded. For the greatest living American—an estimate which many shared—the White House would seem the proper ultimate destination. But General Marshall was known to have no such ambition; he promptly announced that he was not a candidate and could not be drafted—a decision which at least greatly eased his relations as Secretary of State with a Congress full of aspirants to the presidency.

The new Congress came in on January 2nd. Republican leadership in the Senate was effectively divided between Mr. Vandenberg on foreign affairs and Mr. Taft on domestic issues, neither of whom trespassed on the other's property. In the House, Speaker Joe Martin headed a group which managed to keep that unruly body pretty well in control. But Congress had to fit itself into the new framework created by the Legislative Reorganization Act; which among other reforms had greatly reduced the number of committees. Carrying out its provisions was made much easier by the change in party control; nevertheless, before the session was over the reduction of committees had been so compensated by a proliferation of subcommittees that there was little saving in members' time. The Reorganization Act also provided for a legislative budget; the money committees of the two Houses were to get together, decide how much should be spent in the coming year, and hold all appropriations under that ceiling. The event proved that however sound this procedure might be in normal times, when needs for expenditure are calculable, it had little relevance to this unpredictable age; but even before that became clear, the Legislative Budget Committee had already fought itself to a standstill.

The President's budget had estimated government expenditure for the coming fiscal year at thirty-seven and a half billion dollars, with revenue somewhat higher (in fact it proved considerably higher). This was a bookkeeping figure, with little relation to cash income and outgo; but it was far too high for the Republicans, who had promised reductions running all the way up to ten billion. Just what the "mandate" of the voters had been, however, remained a matter of dispute even in the majority party. The Joint Budget Committee, under House leadership, voted to reduce the President's estimate by six billion, but the Senate Republicans would go for no greater cut than four and a half billion. On the objective, to the end of the session, the two Houses never could get together; and the result was considerably lower than either.

Under the vigorous lead of Chairman John Taber, who had promised to go after expenditures with a meat ax, the House Appropriations Committee did try hard. Sometimes it also tried intelligently; the recommendations of Mr. Plumley's subcommittee on the Navy budget made sense, if you were going to materially reduce the Navy budget; and the cuts made by the Dirksen subcommittee in the agriculture appropriation were plausibly defended on grounds of national policy. But these latter were bitterly opposed by the farm bloc—unsuccessfully in the House but with better luck in the Senate. The State Department was drastically cut, just when we most need a State Department; so was the Department of the Interior, often in activities which conflicted with the interest

of private power companies. But the Senate frequently corrected the damage done by the House; indeed both appropriations committees sometimes found that their earlier estimates of possible reductions had been completely unrealistic. They never said so, of course; politicians make no such damaging admissions, if they can help it. But when the session ended it turned out that the meat ax had cut little more than might have been done with a butcher knife. Appraisals of the total reduction ran from a billion and a quarter, by some of the Democrats, to upwards of seven billion (including rescission of unexpended past appropriations) by some of the Republicans; my personal computation makes it about two billion in real money. But government bookkeeping is complex; you can find figures to justify any of these estimates, high or low.

The first bill introduced in the new Congress, by Chairman Knutson of the House Ways and Means Committee, had called for a twenty percent across-the-board reduction of personal income taxes, retroactive to January 1st. Mr. Knutson had vigorously advocated this in the campaign and believed that the electoral victory was a mandate for his program; but some of his Republican colleagues disagreed. Before the bill came to the House floor it had been amended to give greater percentage reduction to the poor, less to the rich; after it passed the House the Senate changed it to take effect at the beginning of the fiscal, not the calendar year. But the President vetoed it as neither the right kind of tax reduction, nor at the right time; and by a margin of two votes the House sustained him. Supporters of tax reduction claimed that veto of such a bill, while not contrary to the letter of the Constitution, was an unprecedented defiance of its spirit; so they tried again. Once more a veto, this time overridden in the House but sustained by the Senate; leaving a possible issue for next year's Presidential campaign, on which each side was confident that it had the better story.

But the most bitterly fought issue of the session was the labor-relations bill. Introduced in the House by Mr. Hartley of New Jersey, it was described as a bill of rights for the workingman, freeing him from the tyranny of union leaders. Union leaders objected that it left him defenseless against the tyranny of the employer; they called it a slave-labor bill. Before the year was out all the more extreme statements, both for and against it, began to look like nonsense; but it made a great uproar at the time. Containing drastic restrictions on union activity, it was eventually passed in the House by a majority of Democrats as well as Republicans; but in the Senate it ran into trouble. Republican insurgents maintained that its subject matter properly fell into four separate bills, two of which the President would probably have signed; but the Senate Republican conference voted to put it all together as the House had done—something which Mr. Hartley later described as the essential triumph of his strategy—so that the White House would have to take it or leave it, good and bad, all in one piece. Mr. Taft personally undertook its sponsorship; but he had a continuing fight in committee against Aiken, Morse and Ives, who were sometimes sustained by the full Senate; so that what came out was considerably more moderate than the House bill. But in conference, the House got the better of most adjustments; and what was eventually passed by a bipartisan majority in both Houses was seldom clear, and sometimes self-contradictory.

It was vetoed, as expected; but the President's message ignored some points in the bill which he himself had advocated, and suggested some interpretations that seemed farfetched. The veto was promptly overridden in both Houses; so the advocates of labor-law revision had got their way. What else they had got was doubtful. Mr. Taft and Mr. Hartley promptly disagreed as to what the Taft-Hartley Act meant, and the next big union contract made it uncertain whether it meant anything at all. More than any one other individual, John L. Lewis was responsible for the climate of public opinion which made the Taft-Hartley Act possible; yet two weeks after its passage he signed an agreement with the mine owners which provided, in substance, that they pay no attention to the Taft-Hartley Act—an example which other unions followed.

Congress did other things besides tax reduction, budget reduction, and labor-law revision. It enacted the bill for federation of the armed forces; but it let the draft law

expire, and showed little interest in the universal military training which the army wanted. It ignored the social legislation recommended by Senator Taft as well as that which the President had long been urging. But it passed and sent on to the state legislatures a constitutional amendment providing that hereafter no President could have more than two elective terms—in other words, there must be no more Roosevelts. (By Republican theory, based on the leadership of a group, not an individual, we never need them.) And it took up and enacted a Presidential succession law which Mr. Truman himself had recommended two years earlier; providing that in the absence of a Vice President, the Speaker should be next in succession, and then the President pro tem of the Senate, instead of the Secretary of State as theretofore. The Republicans had little to do but repeat the President's arguments; the Democrats, estopped from opposing a measure he had recommended, concentrated in the Senate on trying to put the chief of that body ahead of the Speaker. Behind that was the conviction that Speaker Martin, well liked as he is, would be a less effective President in case of need than Senator Vandenberg. But Mr. Vandenberg, loyal to his party, successfully led the fight against himself; and the Congressional majority thus guaranteed that George Marshall could never become President, even by accident.

For the first time in fourteen years, the Republicans had had a chance to show what they could do affirmatively, not in mere opposition. Whatever may be the estimate of their accomplishment, some of their leaders had clearly gained in stature. Senator Taft had proved himself one of the great leaders of Congress, in the sense that he understood what its machinery could and could not do, and that he had that instinct for the possible which Bismarck called the essence of politics. Moreover he went out in front on the thorniest issues, and made his position clear with a frankness to which the country is not accustomed in aspirants to the Presidency; nobody, conservative or liberal, would agree with him all the time, but nobody could help admiring his courage and candor. Senator Millikin, as chairman of the Finance Committee, had displayed an admirable realism and coolness of judgment; and Senator Hickenlooper showed both tact and good sense in his handling of the long and ridiculous inquiry into David Lillienthal's fitness for the chairmanship of the Atomic Energy Commission. In the House, Speaker Martin usually kept his followers in hand, and his influence improved some legislation. Of the new committee chairmen (far more powerful in the House than in the Senate, and chosen of course by seniority) some were excellent, one or two were major misfortunes. Democratic leaders found life easier when they were frankly in the minority than in past years, when they had had to struggle against a bipartisan coalition; and some eminent Democratic followers who had seldom voted with their party when it was nominally in control rallied to it loyally, when there was no longer any danger that their votes could accomplish anything positive.

But the real hero of the session, in the judgment of many, was Senator Vandenberg; for international problems loomed higher and more formidable as the year went on, and he practically dragged the administration's foreign policy through Congress on his shoulders. (He had valiant support from Chairman Eaton of the House Foreign Affairs Committee, but Mr. Eaton was suspect to many of his colleagues; he knew more about foreign affairs than they felt a good American should.) Europe had begun to struggle back to its feet when a winter of unprecedented severity beat it down; America was called on for more help, and Washington's problems abroad reacted powerfully on Washington at home. A Congress which had expected normalcy found itself overboard in strange waters; the marvel is not that it swam ashore so late but that it got there at all. On February 27th the President called Congressional leaders of both parties to the White House and told them that the hard-up British would have to unload their financial commitments to Turkey and Greece. Turkey was under Russian diplomatic pressure; Greece was bedeviled by a Communist insurrection supported by the Communist nations to the north. If the British moved out and we did not move in, somebody else would; thereby upsetting the strategic balance not only of the Near East but of the whole Mediterranean.

Students of world affairs had long seen this coming, some day; there was much argument afterward that the State Department should have seen it coming, and issued its warning, long before. But aside from the fact that bad news is never welcome, and that expensive news would be particularly unwelcome to a Congress hell-bent for economy, the State Department could hardly have foreseen the calamitous winter of 1946-47, nor for that matter the almost equally calamitous drought of the following summer, which made all European problems more acute. At any rate, the President came before Congress on March 12th and pronounced what was to become known as the Truman Doctrine—that we must support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure. To that end he asked Congress to appropriate four hundred million dollars for economic assistance to Turkey and Greece; and further, he asked them to do it by March 31st.

As a veteran of Congress, Mr. Truman must have known there was no hope of that. The end of March was supposed to be the deadline for withdrawal of British financial support from Greece; but the suspicion that the deadline was elastic proved correct, and fortunately so. For it took two months to get the bill authorizing this action through Congress; and even then the job was only half done. Authorizations normally include no appropriation; for that, a separate bill is required. And so great is the jealousy between the major committees in the House of Representatives that sometimes both the Appropriations Committee (without whose approval the House seldom votes money) and the Rules Committee (without whose approval no bill comes quickly to the floor) insist on holding hearings on matters already extensively explored by other committees. So it was this time; the money the President had asked for was finally voted four and a half months after he made his request. Luckily Chairman Eaton had inserted in the authorization bill permission for a hundred-million-dollar advance by the Reconstruction Finance Corporation; so the program which the President had hoped to start at the end of March finally got going in the middle of May instead of having to wait till the end of July. It was not a happy omen for the greater and more urgent program that was later to be proposed.

Meanwhile the Truman Doctrine had been attacked from both the right and the left; it proved to be one of the rare issues on which Henry Wallace and the *Chicago Tribune* were in substantial agreement. It would, said its opponents, mean war; so not only radicals who hoped for cordial relations with Russia were against it, but isolationists who still believed that we could ensure world peace by staying at home. But there were other objections. The current Greek government was, as the President had admitted, not an appetizing object of support. Would we give it all-out backing, and thereby lay ourselves open to the charge of supporting near-Fascist reaction; or try to reform it and thus incur the odium of interference in the internal affairs of a sovereign state? (Eventually, and wisely, we did the latter.) It was said that we were by-passing the United Nations, as we were; the impotence of the United Nations before Russian obstruction gave us good reason for doing so, but that argument eventually had to be met by an amendment, proposed by Mr. Vandenberg, pledging us to step out if ever the United Nations felt itself able to take over.

It was also said that the sudden pronouncement of the Truman Doctrine made practically hopeless Secretary Marshall's task at Moscow, where the Big Four foreign ministers were making still another attempt to write a peace treaty for Germany. But the record of the Moscow conference, which ended in practically total futility, makes it doubtful if the Russians would have agreed with the other negotiators anyway. It was alleged, truly enough, that we were proposing to do in Greece exactly what we had refused to do in the comparable, though far more complex, situation in China; that we could not hope to contain Russian expansion everywhere on earth; and that the brusque promulgation of the new policy had injected an atmosphere of crisis and peril into international relations. But the crisis was there, even before attention was called to it; the language of the doctrine certainly had an unfortunate influence on Congressional

debate, in which much was said on both sides that might better have been left unsaid; still it was contended that without this spectacular presentation Congress might not have been sufficiently impressed to act at all.

Which may be true; for the core of Congressional opposition was made up of men who were against the Truman Doctrine because it would cost money, when they had promised to cut expenses and relieve the taxpayer. Economy and isolationism often blended in the same man but economy was the real obstacle, not only to the Greek-Turkish bill but to the measure providing three hundred and fifty million dollars for relief abroad, which narrowly escaped being whittled down to half size. Yet the Greek-Turkish bill, and its appropriation, finally passed; because most of Congress had realized, however they hated to admit it, that the hypotheses on which their program had been based were mistaken, that normalcy was still around the corner.

But before action was completed on this program another was in sight that would cost more, and would afflict the economizers with greater pain. Foreshadowed by a speech of Undersecretary of State Acheson in Mississippi in May, it was set forth by Secretary Marshall at Harvard on June 5th. Europe, he said, faced economic, social, and political deterioration of a very grave character—deterioration which would have serious consequences on the American economy—unless for the next three or four years it could get help from outside; chiefly from us. But that help should not be given on a piecemeal basis as crises develop; it should be not a palliative but a cure. We could not ourselves draw up a plan for European reconstruction; but if the nations of Europe could get together and do so we ought to support it—so far, said General Marshall prudently, as may be practical.

Analysts have discovered a great difference between this and the Truman Doctrine; but it is a difference in tactics, not in objective. We want, said General Marshall, to create in Europe the conditions in which free institutions can exist; which is what we want in Greece too. Our policy, he added, is not directed against any country or doctrine but against hunger, poverty, desperation and chaos; any government that wanted to work for recovery could have our help. But any government which tried to block the recovery of other countries, any government or party which tried to perpetuate human misery for its own political profit, would meet with our opposition. One government, working through its stooges, and one party had tried to do that in Greece; but we hoped they would not try to do so in western Europe.

This clear implication that the Russians, too, could come into the Marshall plan if they wanted to, disarmed a good deal of the opposition that the Truman Doctrine had aroused; but once more they chose to behave like Russians. Coming to Paris on invitation of the French and British, Mr. Molotov proposed that European nations make up a "shopping list" of what they need and ask us for it; but he would have no general reconstruction program by international action. Further, he warned the French and British not to go into such a plan against Russian disapproval—a gesture which is to date the high-water mark of Russian efforts at domination, and which made ridiculous their professed fear of Marshall-plan interference with national sovereignty.

The British and French rebuffed that challenge, decided to go ahead anyway, and invited the rest of Europe (except Spain) to come in too. Fourteen of the smaller nations did come in; the eight in the Russian shadow had to decline, though the Poles and Czechs at least would have accepted but for Russian displeasure. The sixteen-nation conference met in mid-July, hoping to have its plan ready by September 1st. From the outset they had American advisers and when they came up with a preliminary estimate that they would need thirty billion dollars in the next four years, those advisers—notably Undersecretary of State Will Clayton—told them that that was too much. Whether or not it was more than they need, it was feared—perhaps rightly—that request for so much would scare Congress into refusing anything; though it remains a question whether less than they need would not be money thrown away. At any rate they tried again and came out—three weeks later—with a revised schedule calling for

sixteen billion from the United States and six billion from the rest of the western hemisphere; on the somewhat shaky assumption that prewar trade relations with eastern Europe could presently be restored.

That was still a lot of money; and more and more, frightened American conservatives were beginning to talk about the inadequacy of American resources, about the paramount need to maintain our strength at home—where business was indeed booming, but with prices rising so fast as to threaten an early end to happy days for the producer. Prosperity—if that was what to call it—depended in some degree on an immense volume of exports, for which most of our overseas customers could no longer pay without some new provision; but some men were alarmed about the danger of sending too much abroad, and had less to say about the danger of letting Europe collapse. The President had taken note of these fears and had appointed committees to find out how much we have and how much we can spare. But the House of Representatives, claiming its right to be a "full-fledged partner" in foreign affairs—not without excuse, since foreign policy nowadays seems usually to require an appropriation—refused to be content with the reports of the President's committees; or of the sixteen-nation conference; or even of its own Foreign Affairs committee, darkly suspected of knowing something about that subject. The House chose a select group of nineteen, representing all its major standing committees, to go to Europe, see for themselves, and make a report which would certainly have greater influence on Congressional action than the opinion of anybody else, at home or abroad.

It had begun to be apparent that the question was not only whether Congress would act, but how soon. Reconvening in January, Congress would have its hands full with regular legislation, to say nothing of the preliminary skirmishes of the presidential campaign which would take more and more of its time; in that congestion the Marshall Plan would certainly be delayed and might get lost. Also, it was becoming clear that some nations—France and Italy in particular—would need help in a hurry, probably before the session could even begin. The logical answer was a special session, late in the fall, when all the reports on European needs and American resources were available. But the President was reluctant to call it; he knew that once assembled, Congress could take up anything it chose, and the Marshall Plan might be laid aside for something that promised to be better campaign material in 1948.

Yet day by day other causes increased both the pressure for a special session, and the danger of a special session. Food prices in the United States had been climbing upward, with minor fluctuations, ever since price controls had been crippled and then killed in 1946—prices seeking their natural level, as the enemies of OPA had promised us, and seeking it somewhere beyond the stars. Steel prices had been boosted after the signing of the new coal contract and other industrial prices were likely to follow. For all of which—especially the rise in food prices—exports to Europe began to be blamed. They were certainly a factor, but even such conservative leaders as Taft and Hoover acknowledged that they were not the dominant factor. But men who had never thought much of Europe before began to find it a useful alibi for the consequences of their own policies; and the economy-isolationist group which had never liked aid to Europe anyway began to tell us that prices at home would come down if we quit pouring our surplus into what they called the European rathole.

Continuance of food exports, it began to be clear, would entail reduced consumption at home; voluntary rationing was advocated by various public figures but few people had much faith in its efficacy; yet compulsory rationing would require action by Congress, as would restoration of the price controls from which the nation had escaped with a yell only a year before. As prices went on up there was increasing demand for a special session to do something about them; and some enthusiasts added the demand for enactment of various other reforms which may be desirable, but would not appeal to the conservative Eightieth Congress.

On September 29th the President called in the leaders of Congress, of both parties, an

passed the buck back to them. He proposed, he said, to ask the chairmen of the foreign affairs and appropriations committees, of both Houses, to call their committees together as soon as possible. (Since many of their members were abroad, that meant a month to six weeks.) They would look into the European crisis, of which he gave the leaders a summary; and if they recommended a special session he would call one.

The next three weeks were a scramble, devoted mostly to the endeavor to avoid what nobody wanted but what increasingly became inescapable. A voluntary food conservation program, directed by a Citizens' Committee headed by Charles Luckman, started under considerable difficulties—mostly created by confusion and cross talk in the administration—but finally began to hit its stride. The executive branch of government was scraping every barrel in sight to find funds that could be made available to France and Italy without Congressional action; some money was found, but nowhere near enough. Congressmen began to return from their travels with varying reports and opinions, but most of them had drawn the conclusion that Europe needed help and needed it soon. So, on October 23rd, the President summoned Congress to meet in special session on November 17th—only a week after the committees met to consider what to lay before it, but Chairman Eaton of the House Foreign Affairs Committee promised to try for the miracle of getting a report in that time.

The President, however, had set down first in his call for the special session the need of doing something about the rising cost of living at home; emergency aid for Europe was listed afterward, whether or not it was regarded as of secondary importance. Republican leaders accused him of playing politics in bracketing the two topics—even though some of them had been blaming exports to Europe for rising prices. It soon became apparent that while the President could count on at least the necessary minimum of cooperation for immediate foreign aid, there would be little if any agreement on domestic issues—above all on who was to blame for high prices and what to do about them. So the reassembling of Congress on November 17th actually marked the beginning of a new year in Washington—which, as nobody in Congress or the executive branch forgot for a moment, would be the year of a presidential election.

RADIO

by

JOHN CROSBY

Radio Critic, *N. Y. Herald Tribune* and Syndicated Newspapers

IN 1946 everyone criticized radio. In 1947 radio criticized everyone else. This past year the broadcasters not only discovered their own critical powers but exhibited a spurt of creative energy which in some respects refuted their critics and in all respects greatly surprised them. Certainly the most important new contribution of the year was the growth and development of documentary broadcasts. The Columbia Broadcasting System spent approximately \$200,000 on the production of hour-long documentaries which explored the fields of housing, atomic energy, medical care, juvenile delinquency and other public problems. Close behind CBS was the American Broadcasting Company which produced a number of notable documentaries on schools, slums and other subjects.

While documentary broadcasts are not new, the tone of these broadcasts was decidedly new. In past years a documentary would have boasted that American schools possessed more gymnasiums than those of any other nation on earth. In 1947 the broadcasters had acquired a refreshing scepticism. The new type of documentary complained sharply and astutely that, while we possessed a lot of gymnasiums, we had not nearly enough good teachers; our teaching methods were outmoded; our textbooks were antiquated.

Critical and reflective thinking were evident in many other broadcasts besides documentaries. Again leading the way, CBS attempted valiantly and sometimes successfully to explain the shortcomings and expound the glories of broadcasting in a series called "Time For Reason—About Radio." In addition, it struck back sharply at one of its prin-

cipal critics, the newspaper, in a weekly program called "CBS Views The Press," on which the CBS news staff analyzed and criticized the handling of news in the New York press. Almost overnight this became one of the most widely discussed programs in radio. The press took the onslaught with good humor and *Editor And Publisher* printed the full text of the first broadcast.

Besides fighting back, the broadcasters—or at least the more thoughtful broadcasters—tried to correct some of the more criticized aspects of radio. The National Association of Broadcasters drew up a new code regulating commercialism, crime shows, children's programs, and many other types of programs. The code has been adopted by the board of directors but is subject to some revision of its commercial aspects. The code has not yet been approved by the general membership of the N.A.B. and even when and if it is, the N.A.B. faces the difficult task of enforcing it. The millennium has not yet arrived.

As for new programs, there was a great deal of experiment in '47, some of it good, some of it awful but all of it indicative of a rather unusual courage on the part of the broadcasters. The Mutual Broadcasting System, for example, produced a Greek classic *The Trojan Women* with lamentable results. Nevertheless, it deserves an A for effort. CBS on the other hand came up with a brand new and very bright idea called "CBS Is There." This was a sort of replay of great historical incidents, such as the assassination of Lincoln, broadcast just as if CBS had covered the event. In a fine burst of altruism, the Goodyear Tire and Rubber Company sponsored a magnificent public service program called "The Greatest Story Ever Told," a dramatization of the New Testament. The only advertising on the program was the simple announcement that Goodyear presented it.

At the opposite extreme was a new and downright alarming program called "Candid Microphone." On this little horror, a man named Allen Funt who invented the idea circulated around New York pestering innocent citizens into discussing their wives or the price of oranges and recording the conversation through a concealed microphone. Several newspapers remarked bitterly that this was an unwarranted intrusion on privacy but at year's end it was going great guns.

In a rather timid attempt to break away from the dominance exercised by the advertising agency over programs, the four networks dipped more deeply into program production than ever before. CBS boldly presented fifteen or so of its own shows, notably "Doorway To Life," a magnificent dramatic series on child psychology, and "Studio One," an unusually adult, hour-long dramatic program. Mutual and ABC also went in heavily for production. NBC whose schedule was almost completely filled with sponsored programs showed the least inclination toward experimentation.

Another faint but heartening trend was the diminishing popularity of give-away shows, one of the worst plagues on the air. In a poll of advertising agencies by *Tide* magazine, 49 percent of the advertising executives declared they wouldn't advise a client to sponsor such programs and only 7 percent said they would. In another poll taken by *Billboard*, station program directors voted overwhelming disapproval of give-aways. The only favorable vote came from the audience who continued listening in distressing numbers.

A few fresh personalities emerged during the year. Easily the most discussed new comedian in many, many years was Henry Morgan, whose popularity continued to grow. Jack Paar, the summer replacement for Jack Benny, won such wide acclaim with his witty satire that he was given his own program for the winter. The most publicized new singer of the year was a Miss Margaret Truman, who made her debut with the Detroit Symphony over ABC. However, the most spectacular new personality is really a very old one. After years of semi-retirement, Al Jolson was catapulted into the limelight by the motion picture "The Jolson Story." He immediately became the most sought-after guest star in radio. Since his appearance had an almost magic effect on Hooper ratings, Jolson was soon offered a dozen shows of his own. The sixty-year-old mammy singer took over as master of ceremonies on the "Kraft Music Hall" which has wobbled dangerously since the departure of Bing Crosby.

1947 will go down in broadcasting history as the year in which the disk jockey reached full bloom. One of the oldest devices in radio, the disk jockey has come a long way from his early anonymity to a full network show. The emergence of the disk jockey indicates a decided change in the tastes of listeners. For some years now, local independent stations have been attracting more daytime listeners with their baseball games and disk jockeys than the network stations with their soap operas and audience participation shows. According to a survey in *Broadcasting* magazine, nine out of ten radio stations in the country have disk jockey shows which broadcast an average of two hours and twelve minutes a day. Following or rather pursuing this trend, the American Broadcasting Company introduced Paul Whiteman on a full-hour disk jockey show five afternoons a week. Mutual quickly followed, turning its full network over for an hour in the afternoon to WNEW's veteran disk jockey, Martin Block. CBS and NBC, which look upon records and transcriptions as a threat to their existence continued to regard the disk jockey with well-bred horror.

Another threat to the networks which disquieted all of them was the monumental growth of transcription. The biggest operator in the transcription business is Frederic W. Ziv Company, which peddles excellent programs to individual stations for as little as \$3.75 a program. By the end of the year, 703 stations, or about two thirds of all the stations in the country, were carrying one or more of Ziv's programs, and he is by no means the only man in the business. Ziv's most ambitious program, "Favorite Story," features Ronald Colman and boasts a cast and production that can't be surpassed by any network show.

Cooperative programming, though not a new development exactly, deserves some mention since it attracted hundreds of new adherents during the year. A cooperative program is a joint operation between the network and producers of the program (as opposed to a single advertising agency). Many of them are sponsored by scores of small advertisers, each in a different city. The ads are heard locally whereas the program is heard nationally. Among the programs which went cooperative in '47 were three perennial favorites—Kate Smith, "America's Town Meeting of the Air" and "Information, Please."

No review of the year would be complete without a mention of the Fred Allen Incident. On the night of April 20, Allen made a wry remark about an NBC vice president whose sole job was to cut off the end of his program. (Allen rarely manages to finish his program in the allotted time.) For this grave lese majesty, NBC cut him off the air for twenty-five seconds, the first time such a thing had happened to the veteran comedian in fifteen years of broadcasting. Newspapers across the land took up the story; radio comedians including those on NBC kidded the pants off the network; and the affair terminated with midgets dressed as vice presidents picketing Radio City. In midsummer the NBC vice president in charge of programs who was responsible for all this nonsense had departed for other pastures and NBC by its own admission had regained its sense of humor.

SPORTS OF 1947

by

GRANTLAND RICE

Dean of Sports Writers

ONCE AGAIN the spectators rather than the competitors were the feature performers of a sports year. Even greater than that of 1946, a record-breaking year at the turnstiles, was the human tide of 1947 flooding the parks, arenas and enclosures that exposed baseball, football, basketball, tennis, golf and other sports activities to public view at more or less popular prices. There may have been a slight drop here and there in racing receipts but, on the whole, the turf had a good year. Boxing was the one sport—or is it strictly a business?—that fell out the window, though it didn't come close to being killed

in the fall. But the absence of any fearsome contender for the heavyweight crown worn by Joe Louis was the crusher. With no big outdoor fight for the heavyweight championship, the whole boxing campaign of 1947 flattened out dismally. The return duel in which Rocky Graziano, barred in New York, wrested the middleweight championship from Tony Zale by a sixth-round kayo in Chicago was one of the few good fights of the year. Outside of the middleweight division there was a sad lack of talent and only Joe Louis among the heavies and Ray Robinson amid the welterweights stood out above the dull run of the boxing mill.

The early rush through the baseball turnstiles was accompanied by a hurricane of angry words flung hither and yon by Lippy Leo Durocher, manager of the Dodgers, Branch Rickey, president of the Brooklyn club, Larry MacPhail, head of the Yankees at that time, and Happy Chandler, Commissioner of Baseball. When the firing ceased Durocher had been exiled from baseball for the season and the Dodgers required another manager. This brought Burt Shotton, former manager of the Phillies, out of an armchair job in the Dodger farm system and Burt managed the Dodgers right into the world series as National League pennant winners.

Bucky Harris, who brought the Yankees to the same postseason rendezvous, was another baseball leader who had his honors thrust upon him. Like Shotton, he thought his managing days were behind him. He had piloted the Senators, Tigers, Red Sox and Phillies and was somewhat weary of that part of the game when he accepted an executive post in the Yankee front office. But MacPhail, looking for a Yankee leader for 1947, found Harris handy and persuaded him to take up his old trade again.

Thus two more or less reluctant and impromptu managers found themselves guiding rival ball clubs through the world series of 1947, about as slow and loose a world series as ever was contested, full of horrors and heroics, one that saw the setting of new records for attendance (389,763 cash customers), receipts (\$2,377,549 including radio and television rights), poor pitching and length of time it takes to play nine-inning ball games. The most bizarre contest of the bewildering series in which the Yankees finally wrestled down the Dodgers by 4 games to 3 was the contest in which Floyd Bevins, Yankee pitcher, gave ten bases on balls and not a single hit until two were out in the ninth inning, at which point the lone Brooklyn hit of the afternoon—a double by a pinch hitter, Cookie Lavagetto—drove in two runs to beat the Yankees 3 to 2.

As the last out of the series was chalked up on the diamond, Larry MacPhail announced that he was stepping out as head of the Yankee front office. His resignation was accepted hastily by his partners, Messrs. Del Webb and Dan Topping. Just previously there had been a flurry of excitement when it was announced that Marse Joe McCarthy was returning to baseball to manage the Red Sox and Joe Cronin was moving into the front office.

The Cardinals were the big disappointment of the baseball year. Injuries hit the club and old age crept up on some of their stars, with the result that the Dodgers disposed of them handily in the pennant race. The Dodgers went through the season and the world series with Jackie Robinson, the first Negro player to reach the big league, as their regular first baseman and one of the strong men in their batting array. Jackie was well received by his fellow players and was popular with the fans all around the circuit.

The Giants didn't figure in any late struggle for the pennant but they did rise from the National League depths with a slugging group that set a season's record for home runs by one club, lifting the old Yankee mark of 182 to a new mark of 221. There was an added batting feature in 1947 in the sudden rise of Harry Walker, brother of Dixie the Dodger, to the National League batting championship from a .237 average in 1946. Harry was traded from the Cardinals to the Phillies for Ron Northey. It was not the best move made by Manager Eddie Dyer of the Cardinals all season. Ted Williams retained his batting leadership in the American League but set no new records in doing it. But new attendance records were racked up at most of the parks on the big league circuit, even by the Pirates who finished in a dead heat for last place in the National League. When a

club that winds up resting on the bottom of the league also sets a new record for cash customers, it indicates a trend.

There was no Triple Crown winner on the turf in 1947. Jet Pilot won the Kentucky Derby, Faultless made off with the Preakness and Phalanx took the Belmont. Thus there was no outstanding 3-year-old. The racing campaign was featured by the three-cornered scramble among Stymie, Armed and Assault in the golden gallop to finish as the leading money winner of turf history. Stymie and Armed passed the \$700,000 pole by early autumn. The big match race between Armed and Assault, finally staged at Belmont, was practically no contest. There was some doubt of Assault's condition before the race but no doubt at all after Armed romped home an easy winner. Assault was thereafter retired from the turf with a bad hoof.

Golf had one of its spectacular years. Practically all the old champions were toppled from their thrones. Lew Worsham displaced Lloyd Mangrum as U. S. open champion and Skee Riegel of California replaced Ted Bishop as wearer of the national amateur toga. Ben Hogan gave way to Jim Ferrier, the Australian, in the P.G.A. test. After winning sixteen straight tournaments, including the British women's title, the celebrated Babe Didrikson Zaharias turned professional, taking her mighty wallop out of the amateur field. The pros played for more than \$600,000 last season, a new high for these wanderers of the bunkered wastelands.

Tennis had a top year. There were cheering crowds at Forest Hills where the slashing play of Jack Kramer and Ted Schroeder kept the Davis Cup out of reach of the Australian challengers and where Kramer retained his national singles title in a surprisingly breathless struggle with Frank Parker. The visiting British ladies were easy victims for our distaff defenders of hearth and home in the Wightman Cup matches.

Track and field followers were treated to pre-Olympic tests (the long view) in preparation for the Olympic competition in London this summer. As usual, it was demonstrated that the United States has a full supply of good sprinters, hurdlers, jumpers and general field-event workers, with a notable shortage of good distance men. Bowling and basketball continued to be the leading games for the numbers of players involved and basketball was setting new spectator records from coast to coast.

Football gave early evidence of steady growth in the professional field by crowds of 105,000 in Chicago and 82,000 in the Los Angeles Municipal Coliseum. College football packed in the spectators in record numbers all over the academic map and the Bowl season became a trifle more frenzied than ever. Each New Year's Day sees some new Bowl added to the football collection. There was a time when football began in October and ended with November. Now they start in August and are still carrying, kicking or passing the ball on New Year's Day, thus adding two and a half months to the football season that our forefathers knew. All in all, 1947 was a year that provided some good competition, a vast amount of amusement and a record-breaking whirl of the turnstiles.

THE THEATRE . 1946-47

by

BROOKS ATKINSON

Drama Critic, *The New York Times*

AMID THE USUAL walling and foreboding, Broadway had one of its most interesting seasons. During the 1946-47 season, eighty-seven productions opened on Broadway—eight more than in 1945-46. Although the Pulitzer judges, sharing Broadway's perennial despondency, were unable to find a single new play worth their crown, the New York Drama Critics Circle chose Arthur Miller's *All My Sons* as the best new play of the year, and selected Jean-Paul Sartre's *No Exit* as the best new play by a foreign writer.

Among the most notable Broadway events was *The Iceman Cometh*, the first new play by Eugene O'Neill produced in twelve years. An ominous drama, full of dark adumbrations, it brought back many of his familiar qualities—a group of the world's dispossessed vagrants, a tone of hopelessness, coarse, verbose and vigorous dramatic speech in the naturalistic tradition, and parts that could be acted forcefully in terms of the theatre. Like *Strange Interlude* and *Mourning Becomes Electra*, *The Iceman Cometh* took five hours to reach a conclusion—about twice as long as the material warranted. In its original form it opened in the late afternoon, adjourned for a hurried supper hour and then renewed its tale of doom until eleven o'clock. When too many theatregoers found this arrangement inconvenient, the schedule was revised to pack the whole drama into one long evening that began at 7:30. But Mr. O'Neill would not consent to having his drama cut down to the size of a normal theatregoer.

For his characters Mr. O'Neill returned to the period and the environment that have left the deepest impression on him as a dramatist. Using as his setting a water-front saloon in New York about thirty-five years ago, he assembled a group of whisky-soaked derelicts who were sustained in their degradation by noble illusions about their past. *The Iceman Cometh* argued that it would be cruel and perhaps fatal to separate these ghastly people from their romantic illusions about themselves. Always an able dramatist, Mr. O'Neill wrote parts conspicuously well adapted to stage acting; and the performance directed by Eddie Dowling, was memorable throughout. But none of the acting equaled the performance by Dudley Digges as the gaunt, fumbling and irascible host of the living corpses on the water front. Known for many years as a superb performer, Mr. Digges gave a glorious performance in Mr. O'Neill's heavy-freighted drama.

Maxwell Anderson's drama about *Joan of Lorraine* involved a complicated argument about faith. To present the two sides of his argument he wrote his drama in the form of a stage rehearsal. This impromptu scheme made it possible for the actress who played the part of Joan to argue ideas with the stage manager involving the faith of the Maid of Orleans. The precise points of faith were a little elusive in Mr. Anderson's prophetic cabalism; but the unconventional form of the play without scenery and almost without props proved to be thoroughly beguiling. Ingrid Bergman is an actress of such radiance and sincerity that audiences happily surrendered to her all season; and hundreds of Broadway characters, heretofore undistinguished for their spiritual nobility, were eager to embrace any faith that Miss Bergman was representing. During the summer many other actresses played *Joan of Lorraine* successfully in summer theatres and off Broadway—proving, among other things, that Mr. Anderson had written a sound dramatic play.

In *All My Sons* Arthur Miller, who had written only one play previously, told in deeply moving terms the tragedy of an American family that was trying to forget the war and settle back comfortably into the easy grooves of civilian life. A Middle Western manufacturer with a strong feeling for family solidarity was gratefully receiving back into his home one son who had returned from overseas. In the course of the play Mr. Miller disclosed that during the war the manufacturer had knowingly delivered some imperfect cylinder heads that caused the death of a number of American fliers; and Mr. Miller, who is an eloquent dramatist, related this tragically irresponsible industrial episode to the death of a second son in the Pacific.

All My Sons was brilliantly staged by Elia Kazan, and acted sententiously by a cast that included Ed Begley, Arthur Kennedy, Beth Merrill and Lois Wheeler. Although Broadway soothsayers declared after the opening that the public would not support play about the war, *All My Sons* ran prosperously through the end of the season, survived the summer and continued into the 1947-48 season as one of the most popular plays of the year, although it was denounced as communistic, branded as a smear on the nobility of American industry and forbidden in the theatres of the American occupation zone in Germany. Mr. Miller is a conspicuously talented new playwright, and *All My Sons* shows a genuine gift for the mobile architecture of a play.

*Still running as of October 31, 1947. (M)—Musical; (MR)—Musical Revue; (R)—Revival.

Among the other interesting plays of the season were Anita Loos' *Happy Birthdays*, which provided Helen Hayes with a gay and tipsy holiday of convivial fooling; Rudolph Gordon's *Years Ago*, an autobiographical play in which Fredric March gave a splendid finished portrait of the apprehensive head of a middle-class family; Lillian Hellman's violent *Another Part of the Forest*, which chronicled another chapter in the career of a greedy Southern family whose malefactions were first brought to the attention of startled Broadway in *The Little Foxes*; Moss Hart's *Christopher Blake*, which told the harrowing story of an adolescent boy whose parents destroyed his family life by divorcing; George Kelly's caustic study of a silly woman in *The Fatal Weakness*, in which Claire gave a remarkably witty performance; and Norman Krasna's formula farce, *John Loves Mary*, which was expertly staged by Joshua Logan and well-played by Tom Ewell. Nina Foch and William Prince. Clifton Webb gave an amusing performance in *Present Laughter*, a second-rate antic by Noel Coward.

Because of the shortage of good new plays there were twenty-six revivals during the season—an unprecedented number. John Gielgud's superbly stylized production of *The Importance of Being Earnest* was the best of the lot, and superior to his companion revival of Congreve's *Love for Love*. No American company ever played Wilde as wittily as Mr. Gielgud and his company did. Burgess Meredith appeared in an indifferent revival of Synge's *Playboy of the Western World*. Early in the season José Ferrer acted a keen and robustious *Cyrano de Bergerac*, using Brian Hooker's skillful adaption. Bert Lahr starred in a warm, comic revival of *Burlesque*, written twenty years ago by Arthur Hopkins and the late George Manker Watters.

One of the most acrimonious episodes of the season was the attempt made by Eva Le Gallienne and Margaret Webster to establish a permanent repertory theatre in Columbus Circle. After devoting a long period to making plans and raising sufficient capital, the American Repertory Theatre opened in November with a performance of Shakespeare's *Henry VIII* and a repertory company that included in addition to the two founders, Webster Hampden, Ernest Truex, Victor Jory and June Duprez. Within a few weeks the company went on to enlarge its repertory with performances of Barrie's *What Every Woman Knows*, Ibsen's *John Gabriel Borkman* and Shaw's *Androcles and the Lion*.

But the ruinously selective interest of the public in these noble plays and the high costs of repertory producing quickly exhausted the financial resources of the company. Although Actors Equity, the American Theatre Wing and several organizations, actors and friends of the theatre contributed large sums of money to keep the company in existence. After a reorganization to reduce the operating expenses the ART opened with a revival of the late Sidney Howard's *Yellow Jack*, but this production was a failure. In April Miss Le Gallienne and Miss Webster revived the Le Gallienne and Friebois version of *Alice in Wonderland*, which became popular immediately, although again the high costs of producing confined its success to one of esteem. As an indication of the high costs of operation in the theatre, let it be noted here that one week *Alice in Wonderland* earned \$21,250.40 at the box-office and showed a net profit of \$1.22 against its original production investment.

In the field of musical drama Broadway had an extraordinarily rich season. None of the conventional musicals amounted to much. But good things came with a rush in midseason. Using Elmer Rice's tone poem of New York, *Street Scene*, as a libretto, Kurt Weill wrote the score for a magnificent musical drama and Langston Hughes set it with imaginative lyrics—both of them finding the song of humanity under the argot of the sidewalks of New York. Despite the common complaint that Broadway could no longer assemble a cast of good singers, Charles Friedman brought together an excellent cast of singing actors, headed by Polyna Stoska and Anne Jeffreys.

On the next evening, *Finian's Rainbow*, by E. Y. Harburg and Fred Saily, translated some humorous Irish folklore into a glorious theatre event; and New York had hardly settled back to a normal frame of mind before Alan Jay Lerner's *Brigadoon* carried the musical stage a step or two closer to aesthetic artistry. Both of these productions made imaginative use of the ballet; instead of appearing as subordinate decoration, the bal-

became as vital to the themes as the singing and acting. If the season contributed any thing positive to the theatre as an art, it was through the high artistry and technical resourcefulness of these musical dramas that courageously broke with the old Broadway formula.

In the field of industrial relations the most interesting event of the year was Actors Equity's success in compelling the managers to accept a new contract with a clause referring to racial discrimination. The National Theatre, which is the only legitimate playhouse in Washington, D. C., observes Jim Crow laws by refusing to sell tickets to Negroes. According to the new basic contract, managers cannot require Actors Equity casts to play in the National Theatre unless the Jim Crow restrictions are lifted before August, 1948. Many managers—notably the Playwrights Company—were as eager as Actors Equity to abolish racial discrimination in the one legitimate theatre now open in the capital of the United States.

FICTION IN 1947

by

JOSEPH HENRY JACKSON

Book Critic, *San Francisco Chronicle*

A SHREWD OBSERVER once remarked that Americans seldom tire of looking at themselves. If that analyst of character had known his Steeplechase Park a trifle better, he might have elaborated his marginal note on his countrymen's foible. Americans, the fact is, dearly love looking at themselves, and never better than when their persons are reflected in mirrors which make them over into giants or pygmies, or even turn them upside down.

In 1947 our successful novels testified solidly to the truth of this general observation. As never before since the years following World War I, Americans were being shown what they could be like, and seldom in any straightforward looking glass. America in the throes of race prejudice, America badly taken in drink, seen as the modern high-powered salesman or as the end product of the natural frontiersman—a role our people have always rather liked—America was caught in the novelist's glass and given back to itself in a hundred forms. Almost everybody who could write fiction at all was doing it.

Furthermore, Americans demonstrated that they relished the performance. The public cavorted in this Hall of Mirrors, and the novels that did the reflecting, especially when they showed the reader to himself in poses of a downright unpleasant nature, found enormous audiences. Americans were in a mood to be told off, and they embraced most warmly the writers who scolded hardest.

Unhappily, the urge to upbraid did not always result in first-rate novels. Indeed, the ready acceptance of moral lessons cast in fiction form seemed chiefly to encourage second- and third-rate journalism. Clever people wrote in nimble prose well-camouflaged tracts on race prejudice, on the horrors of alcoholism and whatnot else, and the deception was too infrequently detected by a public eager to be put in its place. Time and again novels found readers not because they were good novels but because they were well intentioned. Even the professional appraisers far too often gave new fiction high marks simply on the ground that there could be no doubt the author's heart was in the right place. Looking at 1947 one is reminded of nothing quite so much as the early 1930's, when the dreary parade of deadly serious and often thoroughly absurd novels about The Proletariat found advocates ready and willing to declare them transcendent works of art. It was all very silly, you may remember, and to some extent discouraging and the year just past was more than a little like it.

Along with all this, to be sure, 1947 was notable for another sort of fiction, the "historical" romance. There is nothing new, of course, about the fact that a lot of people will always admire and pursue this form of escape-literature. And 1947 was the year in which the book trade discovered it was pinched between fantastically rising costs and the price the public would be likely to pay for a book. Wherefore dozens of publishers bet on the nearest to a sure thing they could find, and that was the historical romance. There must be thousands of Americans whose association with 1947 for the remainder of their lives will take the pictorial form of that lovely creature who appeared with machinelike regularity on one book-jacket after another, alluringly bosomy in a red-blue-and-yellow "period" gown—though of what period precisely was never entirely clear. This, it is granted, is a side issue, bearing little relation to literature though perhaps some relation to life as millions of readers like to imagine it.

What I am talking about, however, is the serious novel. And in spite of critics who see ahead only more fiction of doubt and despair, I do not believe that is the whole story. Americans will remember that the attitudes which produced the negativism of the 1920's changed with the crisis of the 1930's. The fiction of that postwar period

proved, as Maxwell Geismar once pointed out, to be the forerunner of a cycle of spiritual affirmatives, of new and strong statements of belief in the future of the very America that had been so roundly condemned, chidden, shown its ugly lineaments in the mirror of its creative writing. It seems to me reasonable to suggest that such a cycle is due now and that we are about to enter it. One interesting indication may be found in the contemporary "little" magazines which, almost all of them, have refused to follow the pattern set by the experimental magazines of a generation ago, substituting for the then-fashionable pose of negation a freshly vigorous, if sometimes undisciplined, confidence and purpose. But there have been signs, too, in the books of 1947.

Consider Malcolm Lowry's *Under the Volcano*, certainly one of the most imaginative and admirably controlled novels of the year; in it Mr. Lowry examines a man at the end of his rope, yet does so in no spirit of small cynicism but gravely, seriously and with the detachment befitting his universal theme. Vincent McHugh's leisurely paced *The Victory* is another of the year's solidly good achievements in fiction. But although the author sees much to disturb him in his Pacific island where The System so often wilts the decent human impulse before it gets its growth, his purpose in this aspect of his novel is to warn, and you don't trouble to issue warnings unless you believe that there is a chance for improvement.

There was, moreover, Gerald Warner Brace's novel, *The Garretson Chronicle*, in which the author, while he described accurately and beautifully some of the confusions of a young American, did so in the spirit of a surgeon performing a debridement—the removal of dead and infected cells in order that new, healthy tissue may grow. There was Martin Flavin's delicately robust fable, *The Enchanted*, which reminded readers that the sweetest Never-Never Land must have its conflicts, and that the human spirit cannot be satisfied with material comforts and will not be satisfied with defeat. It is not difficult to discover in American writing during 1947 many another hint that all the nastiness of war and all the pettiness of war's aftermath have failed to abate the novelist's faith in man's essential dignity. We are still in a mood of pessimism; the sensitive human being cannot but feel that the years of violence and destruction have released forces beside which the relatively artless evil of a Hitler was easy to comprehend and to combat, and that the presence of these forces constitutes an emergency of the most deadly kind. Yet there are various ways to define an emergency, and one of them is to regard it as something which men rise to meet. I have never believed that this capacity in Man is altogether a matter of good will or even of intent. Man, it seems to me, rises to emergencies because, like Luther, he cannot do otherwise.

If this is true, as I think it is, then the American writer's approach to his material from now on is not going to be wholly a question of choice. With the already widespread recognition of what is to be fought and what is to be rescued (perhaps, to give our immediately contemporary novelists their due, as a result of their prickings), the novelist of tomorrow will rise to a new and firmer purpose at least partly because he cannot help himself. It is always a healthy thing to question current definitions of what is true, what is honorable, what is noble, what is of good report. It is no longer a healthy thing when this questioning becomes, upon discovery that certain definitions have been distorted, a denial of the qualities themselves. But the remedy lies within the disease; the cyclical swing takes place; the artist senses that the time for denial, for easy cynicism, for denigration, has passed, and he turns (let me repeat that I do not believe it is all a question of conscious volition) to affirmation, to intelligent hopefulness, to the brightness he must see ahead.

Is this too mystical a view of it? I do not think so. You may recall the "one-man revolution—the only revolution that is coming" of which Robert Frost spoke. Something like that is taking place in the inwardness of the American writer, willy-nilly and at this moment. It is this one-man-at-a-time revolution that will determine the tone of American writing in the time immediately ahead. That tone, I am convinced, will be the firm tone of acceptance, of an affirmation of faith renewed.

THE SCREEN

by

BOSLEY CROWTHER

Movie Critic, *The New York Times*

A SOBER OBSERVER of American movies in 1947 would find it hard to boast any notable distinction in the quality of product released or, indeed, to cite any variation in the year in, year out flow of films. Generally decontaminated of wartime Nazis and Japs and any unhappy reflection upon the late unpleasantness, our movies in 1947 were back so conspicuously to "normalcy" that only an infrequent entry intruded the least disturbing thought. Sixty to seventy million American customers were able to relax.

Not so the poor producers. While their pictures put out during the year were doing a vast domestic business (the quarterly financial reports of the major producer-exhibitors read like lyric poems), their minds and future prospects were shaken by many alarms. More than in most other industries, production costs zoomed during the year, to make the average picture cost twice as much as six years back. Labor unrest in the studios was an almost continuous concern, adding to qualms and to budgets, with dubious prospects of relief. Writers threatened "rebellion" against plans to "control" their works. And to add insult to injury, the House Un-American Activities Committee barged in and loosed the innuendo that Hollywood was rife with "Reds."

Worst threat to a bright and happy future, however, came from abroad when the desperate British Government slapped a 75 percent tax on British earnings of foreign-made pictures, thus laying a disastrous paw upon the "take"—almost clear profit—of the American companies in the British Isles. Although this tax was a frantic endeavor by the British to check the drain of dollars in their highly unfavorable balance of film trade (approximately four out of five pictures shown in Britain came from Hollywood), the American film companies decided not to send them any more films—a move which was later discovered to be an amputation of the nose to spite the face. But the American companies were frightened. The tax in Britain meant a grave, a perilous loss. Other nations might follow that example. Foreign remittances were sadly shrunk by the year's end.

This hasty review of the major concerns of the movie industry is given because these anxieties were reflected commercially in production and releasing schedules during the latter part of the year. Fewer than average productions were put on the studio floors, budgets were shaved, employes laid off and stories were less rashly bought. The consequences should be apparent in 1948. It could be that quality improvements might be effected by ill winds of hurricane force. It was evident, too, that Hollywood was husbanding its pictures toward the end of the year, jockeying to get the most from them in the home market, the only big one left.

These pictures—and all the year's product—were reflective in their turn, of course, of the general postwar assumptions of public taste by the chiefs in Hollywood. And, excepting a score or so of entries which merited adult regard, it appears that these costly assumptions were more flagrant than flattering. No film released in '47 matched in maturity the outstanding, honors-winning holdover from 1946, "The Best Years of Our Lives," nor even the lyrical "The Yearling," which likewise played its major time this year. Most of Hollywood's product, as usual, was trivial and banal—qualities, which in some cases, were no deterrents to box office success, as was evidenced by the staggering grosses of "Forever Amber," "Unconquered" and "Duel in the Sun."

Perhaps the most notable exceptions—thematically, at least—were a pair of surprising pictures on anti-Semitism, a subject long taboo. The first of these outspoken pictures was RKO's "Crossfire," a swiftly made, inexpensive item which beat a trend of allied dramas to the screen. Telling a sharp, suspenseful story of a manhunt which shockingly reveals that an American soldier has murdered an American civilian in this country out of sheer, violent hatred for Jews, it conveyed an arresting message of tolerance and

democracy within a conventional and popular melodramatic form. Well played by Robert Ryan, Robert Mitchum, Robert Young and Sam Levine, it stimulated wide interest—and some controversy, too. General critical reaction was that the film unmuzzled the screen on an urgent and delicate subject and that it did so tactfully, even though it made little contribution to an analysis of anti-Semitism *per se*. In some other areas, however, it was feared that this film would only prod and even support anti-Semitism, especially in critical areas. "Gentleman's Agreement," released in mid-November by Twentieth Century-Fox, was an eminently faithful picturization of the Laura Z. Hobson book, dealing with the shocks of a Gentile journalist who pretends that he is a Jew. Less violent in action than "Crossfire," it gave a more normal concept of the sores of anti-Semitism, economic and social, in communities where it prevails. Gregory Peck, Dorothy McGuire and John Garfield were starred.

Another event of significance was the reappearance of Charles Chaplin on the screen in a film of extraordinary candor and disturbing eccentricity, his "Monsieur Verdoux." In it, Mr. Chaplin, not seen since his "Great Dictator" of seven years back, departed entirely from his beloved "little tramp" character and played a suave, determined Bluebeard, a *petit bourgeoisie* family man who was secretly in the business of marrying affluent women and then murdering them. This cool, sardonic satire was intended to carry the theme that murder is a business in our civilization but is tolerated only on a huge scale. Intellectually extreme and provocative, the picture was, nevertheless, uneven in articulation, rather sloppily produced and strangely disconcerting in its plainly confused comic styles. Mr. Chaplin, who wrote, directed and produced it, as well as acted in it, gave an elaborate performance, touched with genius and also with bathos, while Martha Raye was his best associate. The reaction was significantly "mixed."

The intimations of violence, cleverly handled in the Chaplin film, were much more conspicuous and vulgar in other pictures of the year. "Brute Force," for instance, was a notably vicious and rebellious prison film in which the convicts, sympathetic characters, fought their jailers in a welter of blood. This curious reversion to the morbidity and sadism of the gangster films was evident in such other pictures as James Cagney's "13 Rue Madeleine," "Boomerang," "Kiss of Death," "Born to Kill" and, in part, in David O. Selznick's "Duel in the Sun." This large Technicolored Western, one of the most expensive and most ballyhooed pictures of the year, was a proportionately large disappointment, artistically speaking, as was Howard Hughes' "The Outlaw," which also shook the coils of the censors and got wide domestic release.

A nod to the unleashing of atomic energy was made by Metro in "The Beginning or the End," which so childishly jumbled romance with science that the whole thing came off a dud. It appeared that this most dramatic development of the modern age was too much for the film-makers to vision—or possibly too hot.

Otherwise the year was marked with the usual number of good to average films. "Miracle on Thirty-fourth Street," "The Farmer's Daughter," "Dear Ruth," "The Secret Life of Walter Mitty" (with Danny Kaye), "The Bachelor and the Bobby-Soxer" and "Welcome Stranger" were successful comedies. Music was variously presented by "Song of Love," "Carnegie Hall," "Down to Earth," "Mother Wore Tights" and "Fiesta." And popular works of the stage and literature were generously represented by "Life With Father," "The Hucksters," "The Egg and I," "The Foxes of Harrow," "Forever Amber," "The Late George Apley," "Mourning Becomes Electra" and "Cass Timberlane"—some good, some trash.

Meanwhile the British continued to send a slight but refreshing stream of their more distinguished films to this country. A version of Dickens' "Great Expectations" topped the lot, with "Black Narcissus," "Odd Man Out," "Tawny Pipit," "So Well Remembered" and "I Know Where I'm Going" following. And a grimly moving drama from Italy, called "Shoe Shine," the tragic story of two boys in postwar Rome, gave a revealing indication of future films of greatness from abroad. The French films, "Children of Paradise" and "Man About Town" were the best of a meager gallic lot.

THE CONCERT SEASON

by

VIRGIL THOMSON

Music Critic, New York Herald Tribune

BY STATISTICAL COUNT, nearly fifteen hundred musical events of a professional semi-professional character open to the public and charging admission took place during the New York season of 1946-47. Some three hundred of these were operatic performances; the remaining 1,135 fell in the concert category.

Concerts continued to be dominated, as to prestige and publicity, by the orchestras and among these the New York Philharmonic-Symphony Orchestra received the largest amount of space in the news columns. Responsible for this none-too-welcome windfall were the resignation of its conductor Artur Rodzinski in mid-season and the public squabble that ensued between him and the Executive Board of the Society.

Mr. Rodzinski, in early February, had asked to be relieved of a contract which extended through the following season, alleging that "organizational shortcomings" made it impossible for him to continue his musical direction in full freedom. He specified "managerial interference" by Arthur Judson, business director of the orchestra and a power in concert management, as chief hindrance to the execution of his policies. These, it would seem, had been accepted by the board previously, and a long-term contract offered Rodzinski "without strings attached." Offended, the board accepted the conductor's resignation, specifying that it be effective immediately, rather than in October, as Rodzinski had stipulated. After some bickering, a financial settlement acceptable to the conductor was arranged; meanwhile he concluded negotiations, begun some months before, for the directorship of the Chicago Symphony Orchestra.

The public controversy that accompanied the dispute centered around the suitability of Arthur Judson, president of Columbia Concerts, Inc., and an important stockholder of the Columbia Recording Corporation, to manage a nonprofit-making institution doing business with his other interests. The Philharmonic trustees found no inconvenience in the arrangement. It also countenanced the position of Ralph P. Colin, a member of the Executive Board and the society's attorney, as attorney for Arthur Judson, Inc., and for Columbia Concerts, Inc. In the end, though Judson remained at his post, the Philharmonic trustees lost face before the public; and Rodzinski became something of a hero to the musical world for having attacked openly the Judson concentration of musical power.

For the immediate future, the venerable Bruno Walter agreed to become "musical advisor" to the Philharmonic, with Leopold Stokowski, Charles Münch, Dimitri Mitropoulos and George Szell sharing the conductorship of the 1947-48 concerts. That season opened early in October, with Leopold Stokowski conducting familiar works.

In the season with which this review is concerned, the Philharmonic audience heard and liked, two French conductors new to the United States—Manuel Rosenthal, conductor of the French National Broadcasting Orchestra, and Charles Münch, former conductor of the Paris Conservatory Orchestra. Other notable conducting appearances were those of Stokowski with the Philharmonic, Leonard Bernstein with the Boston Symphony and Thor Johnson with the orchestra of the Juilliard School in a series of "downtown" concerts. In his series with the New York City Symphony (at the City Center), Bernstein revived distinguished American works and famous but neglected classics of European modernism. The appearances of Johnson with the student orchestra were of more than passing interest, for he was, in mid-spring, appointed to succeed Eugene Goossens as director of the Cincinnati Symphony Orchestra.

Despite a hasty re-alignment of conductors caused by the termination of Rodzinski's contract, the Philharmonic carried through one of the longest tours in its history.

The orchestras of Philadelphia, Pittsburgh and San Francisco also made extended tours. The last of these, traveling for two months, averaged a concert a day. The Pittsburgh group visited Mexico City (the first time for an American symphonic ensemble), and the Philharmonic included Canada in its tour. In addition to the accustomed visits of the Philadelphia and Boston orchestras, New York heard concerts by the Baltimore, Indianapolis and San Francisco Symphony Orchestras.

Travel facilities were still lacking to bring the younger foreign soloists to America; but a number of the older, established ones reappeared for the first time since the war. Among these were Myra Hess from England, Gulomar Novaes from Brazil, Jacques Thibaud from France and Georges Enesco from Rumania. All were received with enthusiasm, especially Myra Hess, whose wartime daily concerts in London had added to her already solid musical reputation the glamor of self-sacrifice and physical heroism. Richard Tauber, Viennese tenor, gave several successful recitals in Carnegie Hall following a less than brilliant run in a Lehar operetta. Maggie Teyte, soprano, and Wanda Landowska, harpsichordist, conserved their devoted audiences of musicians. Gunnar Johanneon, pianist, made the most notable impression of the season's newcomers. Broad public favor remained unaltered toward the pianists Vladimir Horowitz, Artur Schnabel, Robert Casadesu and Rudolf Serkin.

Political passions intruded on the musical scene with the return of Kirsten Flagstad, whose recitals in Boston, New York and Philadelphia were accompanied by mounting demonstrations of anti-fascist feeling. In Boston the press was cold; in New York there were pickets outside the hall; in Philadelphia stink bombs were exploded in the Academy of Music as she sang. No diminution of her vocal powers was noticeable after her six years' absence; public resentment was concerned with her lack of a pro-Allied war record. Active collaboration with the German army of occupation in Norway, was, according to a formal statement of the Norwegian Embassy, equally unprovable. Her husband, a friend of Quisling, was alleged to have made a fortune through wartime dealings with the Nazis and was under indictment for treason when he died. Flagstad, who will sing again in the United States next season, has announced her intention of applying for American citizenship.

The season's roster of new music by world-famous foreign masters included Richard Strauss' "Metamorphoses" (Boston Symphony), Shostakovich's Ninth Symphony (Rodzinski and the Philharmonic) and Honegger's "Symphonie Liturgique" (Münch and the Philharmonic). Also heard *en première* were "L'Ascension" by Olivier Messiaen (Monux and the San Francisco), "Musique de Table" (Rodzinski-Philharmonic), "La Fête du Vin" (Rosenthal-Philharmonic) and "St. Francis of Assisi" (Ormandy-Philadelphia), the last three by Manuel Rosenthal. During a guest engagement with the Philharmonic, Rosenthal produced, with E. Robert Schmitz as soloist, a piano concerto by Henry Barraud, musical director of the French State Radio.

The American composer Charles Ives received public recognition of the repute he had long enjoyed among musicians when his Third Symphony, composed in 1922, was awarded the year's Pulitzer Prize in music. Another valued honor, the award of the Music Critics' Circle of New York City, went to Aaron Copland's Third Symphony as the best new American symphonic work of the season. Honorable mention was given to Douglas Moore's Second Symphony. Unrewarded but not unsuccessful were the Ricercari for Piano and Orchestra of Norman Dello Joio, the Third Symphony of Peter Mennin, a suite from William Schuman's ballet "Undertow" and Lukas Foss' "Song of Solomon," in which Blanche Calloway, soprano, was soloist with Koussevitzky and the Boston Symphony.

The notable revivals of the year included Arturo Toscanini's performance with the NBC Orchestra of Berlioz' "Roméo et Juliette" and Dukas' "Ariane et Barbe-Bleue," both somewhat abbreviated. At the City Center Leonard Bernstein revived Stravinsky's "Oedipus Rex." The Collegiate Chorale under the direction of Robert Shaw gave an unusually brilliant performance of Bach's B minor Mass. The Desoff Choirs, Paul Boepple conducting, brought Mozart's Requiem Mass to a hearing in Carnegie Hall. Other choral occasions were about as usual.

The New Friends of Music, who gave the 200th concert of their twelve years' existence made their season further notable by playing all five string quartets by the late Béla Bartók. Easily the most impressive new chamber music work of the season was the Second String Quartet of Ernest Bloch, which won the year's chamber music award of the Critics' Circle. The Quatuor Pascal from Paris made a deep impression on musicians at its single New York concert. In the more recondite concerts modernistic chamber music was copiously performed.

Significant among out-of-town events was the three day Symposium on Music Criticism held at Harvard University in May. The chairmen were Archibald T. Davison, Albert E. Frankensteen and Olin Downes. Speakers included E. M. Forster, Roger Sessions, Edgar Wind, Olga Samaroff-Stokowski, Virgil Thomson, Paul Henry Lang and Otto Kinkeldey. Bohuslav Martinu, Walter Piston, Paul Hindemith, Aaron Copland, Gian-Francesco Malipiero and William Schuman were represented by specially commissioned works. No formal conclusions were reached, but the festivities were marked by high musical distinction and impeccable intellectual tone. Harvard seemed to be making a bid to regain her lost leadership in the formation of America's musical opinion.

THE OPERA SEASON

by

IRVING KOLODIN

Music Critic, *New York Sun*; Editor, *Saturday Review of Recordings*

IT WOULD BE altogether possible, were one so cruelly minded, to compile a record of the most interesting operatic happenings of the last season, and not mention the Metropolitan at all. The devotion of that institution to the tried and the true, even when it is concerned with something novel, is so automatic that the new and provocative must necessarily go elsewhere.

The case was proved beyond question with the presentation last season of the first American work in a span of seasons—Bernard Rogers' setting of a Norman Corwin on an actor called "The Warrior." It had its share of academic "modernism"—but on how dramatic a level compared with the animation and wit of new things elsewhere! The amusing works of Gian-Carlo Menotti were augmented by a skittish dither "The Telephone" which progressed from the Hecksher Theatre on upper Fifth Avenue to a run on Broadway. Coupled with Menotti's shocker "The Medium," the bill compiled a run that even opera backers scarcely expected. The success spread the fame of Menotti to the West Coast where anxious supervisors could not decide whether their highest bids should go for Menotti as a writer or a composer.

An even more engaging blend of words and music was heard at the Brander Mattheis Theatre of Columbia University, where the latest and last collaboration of Gertrude Stein and Virgil Thomson provided high intellectual humor for a week's audiences. A phantasmagoria on the life, times and influence of Susan B. Anthony—the anachronistic cast included Daniel Webster and Lillian Russell—it was titled "The Mother of Us All" a tribute to the pregnant influence of Miss Anthony on feminism and woman's suffrage in the United States. The interest it roused stirred some talk of a production downtown; and also revived curiosity about "Four Saints in Three Acts," which was heard on a CBS broadcast and recorded, at generous length, for RCA Victor.

A new group of opera enthusiasts in Chicago similarly spent its energies on a new work, rather than in attempting to animate old ones. They chose "The Rape of Lucretia" by England's busy Benjamin Britten, and produced it to considerable critical acclaim. Having permitted the Berkshire Festival of 1946 to experiment with the same composer, "Peter Grimes," the Metropolitan decided to chance it for the repertory of 1947. Since the company had already promised its subscribers the deferred premiere of scenes from

okofieff's "War and Peace," the budget of new works for 1947-48 was the most enterprising projected by the Metropolitan in a dozen years.

Though bereft of such novelties, the City Center Opera, in a fall and spring season, showed how it is possible to vary the ordinary repertory and still bring business to the box office. Its greatest success to date followed a gamble with Strauss' "Ariadne auf Naxos," never heard before in New York from a professional company. Some sagacious casting—especially Polyna Stoska as the composer and Virginia MacWatters as Zerbinetta—was coupled with expert playing of the difficult score under the direction of Laszlo Halasz. When it was brought out for the spring season, both of these young people had moved on to more profitable engagements, Miss Stoska with "Street Scene," Miss MacWatters to Covent Garden. Their successors were not nearly so capable, but Halasz did another handsome service to Strauss with a revival of "Salome." There was a happy incidence of limitations in this production, for the small pit argued the use of the reduced "Dresden" version of the orchestration, which proved ideal for the lyric soprano voice of Brenda Lewis. Consequently, the listener heard much more of the music in the pit and less of its bluster than is customary at the Metropolitan.

As a conservatory (in the hothouse sense) of conventional opera, the Metropolitan met a nationwide need in the manner of its six or seven preceding seasons. As well as providing all of America with broadcast opera during its eighteen weeks in New York and Philadelphia, it serviced the Eastern seaboard from Baltimore to Boston as part of its annual tour. Only neglect of the West Coast kept this tour from being truly transcontinental, for the wandering minstrels ranged from Chicago at one extremity to Dallas at the other. Large audiences and maximum receipts were the order everywhere. The variations in repertory from the previous year were not numerous. The most consequential was the first Metropolitan hearing of Mozart's "Abduction from the Seraglio," brought to New York after a success in the summer festival at Central City, Colorado. The endless procession of lovely Mozart tunes was somewhat impeded by those entrusted with marshalling them in proper order; of a sizeable cast, only Eleanor Steber approached the vocal skill desired. Emil Cooper, who conducted, had a better hand for the heavy stickwork of "Boris Godunoff," which he also revived this year, than for the pit point of Mozart.

In response to a heavy show of sentiment from the radio audience, "Hansel and Gretel" was brought back, for the holiday season and a broadcast. It was sung in English by a remarkably fine cast that was almost as understandable as it was listenable: Elaine Conner as Gretel, Risë Stevens and Martha Lipton as alternating Hansels, John Brownlee and Mack Harrell (Peter), and Claramae Turner (The Mother). Fritz Stiedry, who succeeded to the place George Szell vacated when he left for Cleveland, led this work with skill and sympathy, as he had an earlier "Siegfried" and a later "Parsifal."

The Metropolitan got a leg up on one problem with which it had been saddled by the time when Ferruccio Tagliavini made his debut shortly after the new year, in Puccini's "Tosca." Possessed of a limber voice and a non-objectionable personality, Tagliavini answered most of the requirements for a new Italian tenor, especially a lyric one. Not thirty-three, Tagliavini was able enough for Almaviva in the "Barber," Alfredo in "La Traviata" and Edgardo in "Lucia," though only the last of these could be coupled with Rodolfo in "Boheme." In any case, Mulberry Street had a new incentive for patronizing the Metropolitan, for the first time since Gigli departed in the late thirties.

The increasing absence of Lauritz Melchior on concert, radio and movie dates made the discovery of a tenor for the heroic Wagner roles something of an imperative. Set Svanholm was brought from Sweden for the purpose, and showed a likely capacity to succeed. He too, did not approach, in later roles, the success he had in his brilliant "Siegfried"; but, aside from a misguided attempt to sing Radames in "Aida," he went through a range of Wagner roles from Siegmund to Parsifal with credit. These two were better suited to him than Walter ("Meistersinger") and Tristan, but he was invariably a manly, earnest, and musicianly singer.

There was nothing notable among the debutantes until late in the year when Hjoel Schymberg came from Sweden to sing a chirpy but extremely polished Susanna in "Nozze di Figaro," and a merely chirpy Gilda in "Rigoletto." Not many of the Metropolitan subscribers heard Daniza Ilitsch, a Yugoslav soprano who made a late season debut in "Otello," but those who did spoke well of her future. She came, actually, to bolster the touring company, depleted of dramatic soprano by the decision of Zinka Milanov to wed a Balkan diplomat and retire from public opera.

An odd fillip to the last days of the season was provided by Kirsten Flagstad's return to America and the rumors that she would make a *sub rosa* reappearance at the opera house as an emergency saviour of some performance or other. "Parsifal" was the usual nomination, since it was scheduled for several performances in a week's time, with Hilda Bampton—who had not sung the part before—as Kundry in all of them. Management disclaimers to the contrary, skepticism persisted. Miss Bampton sang all the performances, with amazing vocal power and a kind of emotional pulse not previously associated with her.

Other incidents that gave the season its special color included Fritz Busch's direction of "Figaro" and "Meistersinger" for the first time; Dorothy Kirsten's Marguerite in "Faust" and Nadine Conner's Mimi in "Boheme"; baritone volume by the whole lot from Leonard Warren in "Rigoletto"; an emergency Isolde by Jeanne Palmer and an equally unexpected chance for Wolfgang Martin to conduct another performance of the same Wagner score; an exhibition of the true warrior spirit by Melchior when he leapt to the floor from Hunding's table in the first act of "Walküre" and broke a toe on his left foot, but went through with the rest of the role.

Though opera ceased at the Metropolitan in the late spring, mention of the house persisted in the papers through the summer. The airing of plans for a suitable approach to the UN site on the East Side brought to view the project of a real estate firm to remodel six square blocks in the area as a cultural and theatrical center, with the Metropolitan as the nucleus. The plan was turned down by the Board of Estimate, who preferred the recommendations of the City Planning Commission for a simple parky approach covering one block, with no cultural impediments. Thus died the latest of many attempts in the last twenty years to replace the obsolete pile on Broadway with a house worthy of the opera's prestige and pretensions.

PHONOGRAPH RECORDINGS

DESPITE a seasonal slump early in the summer—the first that the record business had experienced in four years—the predicted goal of 400,000,000 records as the start of 1947 seemed well within reach as the year approached its end. On the basis of machines in use, this suggested that, per capita, Americans would buy slightly more than 40 records for every turntable. With the prospect of many more machines available next year, it was believable that the average would be sustained, with more users swelling the total sale in '48.

The swing of business showed Decca's *Jolson* album going over a million at one extreme, Victor's *Goldberg Variations* of Bach (played by Landowska) touching fifteen thousand albums at another, with Oscar Levant's *Rhapsody in Blue*—a 600,000 album seller—in between. However, an independent could still make a dent in the market with the Harmonicats' *Peg O' My Heart*, on "Vitacoustic"—a label virtually created by them—proved. Later in the year, "Bullet" produced one record—*Near You*—which became the best-seller.

The Year's Notable Recordings

Classical Albums—Orchestral

Bartók: Concerto No. 3 for Piano. The last work of the Hungarian master, played with fine comprehension by two of his disciples, Gyorgy Sandor, piano, and Eugene Ormandy conducting the Philadelphia Orchestra. Despite his forbidding reputation, this showed the late Bartók as a composer of tenderness and warmth. (Columbia)

Beethoven: Concerto for Violin. Notable fiddling by Joseph Szigeti in a performance which supplants his own previous album by virtue of present-day recording. Bruno Walter directs the Philharmonic-Symphony as one likes to hear it, and the recording virtually sings. (Columbia)

Chopin: Concerto No. 2 for Piano (F Minor). Although this is not the "Song to Remember" kind of Chopin, many will find it a lot more memorable. Exquisite articulation by Artur Schnabel, animated conducting of NBC Orchestra by Wm. Steinberg. (RCA-Victor)

De Falla: El Amor Brujo. One of the year's two new recordings of this enchanting score, and, generally speaking, the better for Fritz Reiner's painstaking conducting of the Pittsburgh Symphony and Carol Brice's deep-throated singing of the solo part. (Columbia)

Handel: The Great Elopement. A passel of operatic and ballet excerpts orchestrated as Handel might have if he'd known modern instruments. This is pure supposition on Sir Thomas Beecham's part, but there is no guesswork in his energetic, enlivening direction of the London Philharmonic Orchestra. Robust recording. (RCA-Victor)

Khachaturian: Gayne Ballet. Some have called Khachaturian "this year's Shostakovich," but the unique character provided by his Armenian background gives more distinction than that to this vivacious, easily assimilable music. Efrem Kurtz does brilliantly with the Philharmonic-Symphony Orchestra. (Columbia)

Mozart: Symphony in C ("Jupiter"). Purists may find some points to ponder in Arturo Toscanini's direction of this, but the blemishes are apparent largely because of the superb sheen of everything else. High-class reproduction, especially for a Toscanini-NBC collaboration. (RCA-Victor)

Mendelssohn: Reformation Symphony. An oddity, not often played, of the Mendelssohn catalogue; still less often played with the drama and fire that Sir Thomas Beecham applies to it here. The most ambitious, in sound, of all Mendelssohn, as this broad, full-bodied recording of the London Philharmonic suggests. (RCA-Victor)

Prokofieff: Piano Concerto No. 3. Certainly the best of contemporary piano concerti, with Dimitri Mitropoulos as the sure-handed pianist as well as the virtuoso conductor of the Robin Hood Dell Orchestra. Excellent recording. (Columbia)

Prokofieff: Symphony No. 5. This is a long jump from "Peter and the Wolf," but the musicality of the composer spans both extremes. My preference is for the lyric emphasis of the Rodzinski-Philharmonic performance (Columbia) though there is equal merit—more dramatically stated—in the Koussevitzky-Boston album. (Victor)

Ravel: Daphnis et Chloé, Suites 1 and 2. This year's wonderwork from the studios of English Decca, mating their incomparable FFRR (Full Frequency Range Recording) with a dazzling statement of the music by Charles Münch and the orchestra of the Paris Conservatory. Note that this set contains both suites, contrary to usual American practice. (English Decca)

Schubert: Symphony in C. Bruno Walter measures himself against the most challenging of all symphonies and is not dwarfed by it, even adding to his known capacity, *vis à vis* his work. Superb performance by the Philadelphia Orchestra and its assorted virtuosos. (Columbia)

Wagner: Siegfried Idyll, Faust Overture, Ride of the Valkyries. The Toscanini mark on these is its own certification for inclusion in this roundup. Wonderfully plastic playing, fully reproduced. (RCA-Victor)

Classical Albums—Vocal

Britten: Serenade for Tenor, Horn and Strings. One of the most imaginative of contemporary works (settings of Tennyson, Wordsworth, etc.), remarkably sung by Peter Pears, with Dennis Brain playing a majestic French horn. The composer conducts. (English Decca)

Handel: Messiah. There is much that is beautiful if a little that is labored in this performance by the Huddersfield Choral Society and the Liverpool Philharmonic, Malcolm Sargent conducting. Spacious recording. (Victor)

Folk Songs: Susan Reed has a manner that is questionably artful for real folk so simplicity, but the quality of the results demands recognition, whatever pigeonhole found for it. (RCA-Victor)

Classical Albums—Instrumental

Mozart: Quartet in E Flat. Wonderfully balanced teamwork by George Szell (yes, conductor) and three members of the Budapest Quartet. Szell's fingers do not quite find their way on the keyboard without guidance from above, which is a point of commendation in such music. (Columbia)

Classical Single Records

Delius: Walk to the Paradise Garden. Fanciful stargazing by Eugene Goossens and the Cincinnati Orchestra, with some useful eavesdropping by the sound engineers. (RCA-Victor)

Leoncavallo: Vesti La Giuba ("Pagliacci"). High powered passion shredding by Jussi Björling, with an appropriate overside from "Cavalleria," also powerfully sung. (Victor)

Mozart: Symphony No. 26. A recorded first-time of this brief, engaging work. Hardly more than an overture in length, it is played with perception and grace by Koussevitzky and the Boston Symphony. (RCA-Victor)

Piston: Prelude and Allegro. A stately ceremonial by the American composer, done with appropriate pomp by E. Power Biggs, organ, and the Boston Symphony directed by Koussevitzky. Ear-filling reproduction. (RCA-Victor)

Ravel: Ondine. Glittering finger work by Alexander Brailowsky, with enough poetry to take the shine off the exhibitionism. (RCA-Victor)

Tchaikovsky: Eugen Onegin (Waltz and Polonaise). Any Tchaikovsky waltz is worth having, especially when animated by the Beecham touch. (RCA-Victor)

Show Music Albums

Brigadoon: The original cast, with David Brook, *et cie.*, working with will and skill. (RCA-Victor)

Finian's Rainbow. This is the set with Ella Logan, which may be a warning or an indication, according to your estimate of her idea of the part. For my part, merely "Scottish type"; but the others do nobly. (Columbia)

Street Scene. A sizable chunk of the Weill-Rice-Hughes show, in which Rice is often squeezed between composer and lyricist, as indicated. However, this is an authentic record of the occasion, well recorded by the original performers. (Columbia)

Popular and Dance

Armstrong: Jack-Armstrong Blues is a handy catch-all to express the contributions of Jack Teagarden and Louis Armstrong to this potent disc. Bright infectious stuff. (Victor)

Goodman: Benjie's Bubble: This is no epoch in jazz, but it shows what jazz musicians can do with a piece like *Under the Double Eagle* when they tie into it. (Columbia)

Harmoniacs: Peg O' My Heart is having a date with another generation, thanks to the matchmaking of these obscure musicians. But they aren't obscure any more. (Victor)

Shore-Sinatra: Tea For Two is ambrosia for all, as sung here by the Columbia-mad twain of Dinah and Frankie. A fine blend, served at room temperature. (Columbia)

Sablon: Passing By is the English title for this long-standing French favorite, beautifully done by Sablon. (RCA-Victor)

Children's Records

The Small One: Charles Tazewell's fine story of the humble donkey who bore Mary to Bethlehem, told with simple eloquence by Bing Crosby and a well-chosen cast. (Decca)

Tubby the Tuba: A new version of the perpetual favorite, this one profiting from the mimetic ability of Danny Kaye. (Decca)

What the Lighthouse Sees: Fanciful stuff, engagingly sung by Tom Glazer. For the youngster who can become a tugboat by suggestion. (Young People's Record Club)

Record of Major Orchestras, 1947

(h)—At home; (r)—On road.

Organization	Permanent conductor	No. of musicians	No. of concerts	Est. attendance	Home auditorium	Seating capacity
Baltimore Symphony Orchestra	Reginald Stewart	81	32(h) 34(r)	158,500	Lyric Theater	2,651

SCIENCE IN 1947

by

JOHN J. O'NEILL

Science Editor of the New York Herald Tribune

SMASHING its way forward with more than its old-time vigor, science brought into action, in 1947, a battery of the most powerful, gigantic and precise instruments ever constructed by man to attack major mysteries of nature and to re-establish the onward march of science, whose work was halted and whose legions were disorganized during the previous five war years.

The most gigantic of the instruments were, oddly enough, aimed at the two extremes of the cosmos—the outermost bounds of the universe and the innermost recesses of the atom. In the middle realm the biologists started a new campaign to break down the barriers that hide the secret chambers of the nature of life itself. Steps were taken toward freeing man from his age-old status as a prisoner of the earth by seeking to send rocket messengers into outer space.

Someday the astronomers moving toward the outer boundaries of the universe and the physicists moving toward the center of the atom may meet each other face to face as they reach their goals, and find the solutions of all their mysteries in a realm in which there is neither time, dimension, matter nor energy; and there they will find awaiting them a mystic contemplating nothing in all of its harmonious details. The more science seeks to become purely materialistic the more it mathematizes itself in the realms of mysticism.

Astronomy

To explore the unknown heavens the astronomers brought into action, late in the year, the earth's new cosmic eye, the giant 200-inch telescope at Mount Palomar, California, which is expected to penetrate out into the universe one billion light-years—double the 500 million light-years distance explored by the 100-inch Mt. Wilson telescope.

Our universe is exploding. Surrounding galaxies of stars (like our own Milky Way) are moving away from us, the nearer ones at slow speed, the more distant ones faster. At 135 million light-years the galaxies are receding at the rate of nearly 15,000 miles per second. This is nearly one tenth of the speed of light. Double any given distance and there the galaxies are moving away twice as fast. If this situation were to continue, a point would be reached at which the stars would be moving away faster than the light could come back. Under the relativity theory this can't happen because the stars would flatten themselves out against nature's speed limit and transform their substance into energy in an unimaginably vast atomic energy explosion just as they attain the speed of light. The interesting region in which these strange events are—or are not—taking place is somewhere in the neighborhood of two billion light-years away from us.

Astronomers have been increasing the space-penetrating powers of their telescopes at a rate faster than that at which the universe is expanding, at least as far as the explored regions are concerned. The new Mt. Palomar telescope with its expected billion-light-year range may not hit this explosion front for the very good reason that it will first encounter the black-light boundary of the universe. This is the region where the stars are moving away so fast that their light is stretched out until it is a red color and then an invisible infrared or black.

To see into this region it would be necessary to employ the infrared "snooper" used to see in the dark during the war. With such a device attached to the 200-inch telescope the instrument would then become a super-snooper cosmic eye that might reveal the circumambient explosions taking place on all outer surfaces of the universe within which we are living, or something very different.

Physics

The assault on the microcosm—the heart of the atom—was started with the 184-inch, 4,000-ton atom-smashing cyclotron which Prof. E. O. Lawrence brought into action at the University of California, at Berkeley. Capable of producing a 400,000,000-electron-volt disintegrating beam, using lightweight particles, it smashed atoms of all weights from the lightest to the heaviest with interesting and significant, but not spectacular, results—nothing exceeding or equalling the splitting of the uranium atom.

Physicists are on the trail of new ways of releasing atomic energy. The uranium group of atoms, in spite of their spectacular performance in the atomic bomb, are very inefficient producers of atomic energy. They yield only one-fifth of one percent of their substance as energy and produce 99.8 percent ashes. The lightweight elements yield less ashes and more energy. The ideal process would disintegrate the hydrogen atom. If completely transformed it would yield more than 1,200 times as much energy as uranium on an equal-weight basis.

The task of creating matter was tackled by the physicists. This is the reverse of releasing atomic energy. The role of creator was attempted by loading the lightest known particle, the electron, with enough energy, in the form of super-speed, to make it equal the next heaviest particle, the meson, which is about 200 times heavier. It was found, at the General Electric laboratories, that the electron refused to be inflated to this extent. It changed the energy into light instead of into matter. They plan now to shoot an energy loaded particle into an atom to see if it will double itself there.

Baffled in their efforts to understand the mystery of the secret chambers of the heart of the atom, physicists are seeking an entirely new concept of those fundamentals of nature—time, space, energy and matter and how they are linked together. They have used up the intellectual riches of the relativity, quantum and meson theories without learning what is inside the nucleus of the atom. If the Creator should, in 1948, turn over to the physicists the task of operating the universe they would have to let it explode into a universal atomic energy blast because they don't know how a single simple particle like the electron is held together, to say nothing of more complicated structures like atoms.

Biology

The mystery of the life process remains more carefully guarded by nature from the prying eyes of the scientists than the secret of the atom—a wise precaution in view of the first use to which we applied atomic energy. Important biochemical advances have been made. The genes, the carriers of our inheritance, which give the child blue eyes like its mother's and long legs like its father's, have been found by Dr. G. W. Beadle, at Stanford University, to control chemical processes as well—the nutritional processes by which the food eaten is transformed into body structure and body activity. A close linkage between the chemical nature of the genes that control our lives and viruses that cause death has been found by Dr. W. M. Stanley, of Rockefeller Institute. He found, too, that the activity of the viruses is controlled by certain amino acids.

Meteorology

Explorations of the upper atmosphere by rockets proved the suspected existence, above the 20-mile level, of a broad band of deadly ultraviolet radiation. This, fortunately, is intercepted by the intervening atmosphere with the formation of ozone, otherwise life on the surface of the earth would be impossible. The thin air at this altitude was found hot enough to boil water. Temperatures below zero were anticipated. A very cold region was found above it, but still higher, at the top of the rockets' flights, at an altitude of 100 miles a mysterious, still hotter, region was found.

The sun, too, has been found much hotter than previously believed. Instead of the uniform temperature of about 10,000 degrees F., the McMath-Hulbut Observatory found spots of 700,000 degrees, and S. Chandrasekar, of Yerkes Observatory, declares sunspots, believed to be cold regions, are really hot spots where the gasses have temperatures of more than a million degrees, or too hot to be visible.

NEWS RECORD OF 1947

Compiled by

THE NEW YORK HERALD TRIBUNE

JANUARY

FEW AMERICANS stopped to think, as they woke up Jan. 1, that the nation had just finished spending \$8,700,000,000 in the past year for alcoholic drinks. (That was 28 gallons a person, counting in non-slippers.) The high cost of living haunted us in everything else, too, and was destined to continue for many moons. Ford fought inflation by cutting automobile prices \$15 to \$50. Inflation survived this blow. One copy of one book was sold for \$151,000—the Bay Psalm Book (1640) to Dr. A. S. W. Rosenbach. Georgia had two governors at the same time when young Herman Talmadge tried to step into the shoes of his late father; but the courts later took those shoes off; and, surprisingly enough, not a head was bashed in, in this miniature civil war. Mississippi had one Senator instead of the usual two; the Senate had misgivings about admitting Theodore G. Bilbo, champion of the white race and of war contractors.

- 1 England nationalizes all coal mines.
U. S. transfers control of domestic atomic energy development from the Army to a civilian commission.
- 3 80th Congress convenes. Southern Democrats filibuster against Republican attempts to bar Senator Theodore G. Bilbo of Mississippi.
- 4 Bernard M. Baruch resigns as U. S. representative on Atomic Energy Commission.
Senate compromises on Bilbo; his salary continues, but he isn't sworn in.
- 5 Premier Alcide de Gasperi of Italy comes to U. S., seeking coal, wheat, cash for his people.
- 6 Truman calls for moderate labor curbs in message to Congress.
- 7 Secretary of State Byrnes resigns; General George C. Marshall succeeds him.
- 10 Truman sets \$37.5 billion balanced budget for fiscal '48; urges no reduction in taxes.
- 15 Georgia Assembly elects Herman Talmadge governor. Retiring Governor Ellis Arnall refuses to yield office, saying Talmadge election unconstitutional.
- 16 Vincent Auriol, Socialist, elected first President of Fourth French Republic.
Navy expedition lands at Little America in a survey of South Polar region.

17 Marriner S. Eccles, Federal Reserve chairman, says peak of inflation is over; allows stock trading on margin if 7 percent of price is put up.

Paul Ramadier, Socialist, named first Premier of new French constitutional government.

18 Arnall resigns as Georgia governor. Newly-elected Lieutenant Governor Thompson says he is acting governor and carries on fight to oust Herman Talmadge.

19 Poland holds first "free" election, and Communist-dominated government loses 90 percent of Parliament.

21 New York State gives teachers \$300 a year more to meet high cost of living.

26 Grace Moore, American opera star, and Prince Gustav Adolf of Sweden killed with 20 others in crash of Dutch plane at Copenhagen.

28 U. S. rebukes Poland for rigging election.

England offers Burma freedom.

29 Robert R. Young, Cleveland financier, buys working control of New York Central Railroad.

U. S. ends efforts to mediate between Chiang Kai-shek and Chinese Communists; plans to withdraw most of our Marines in China.

DIED: Ogden Reid, 64; Andrew J. Volstead, 87; Harold D. Smith, 48; Lt. Gen. Roy Geiger, 61; Al Capone, 48; Eva Tanquary, 68.

FEBRUARY

EVERYBODY named Richard was unlucky this month. At them was screamed, "Open the Door, Richard." When this song was so popular with the youngsters, nobody knew because it said the same thing over and over ad stupefaction a drunk wanted to get inside, that was the whole story. For oldsters, memories were stirred by the death of Harry K. Thaw. Forty years ago he had killed Stanford White in a fit of jealousy over a stage beauty named Evelyn Nesbit. Miss Nesbit now 62, did not go to Thaw's funeral in Pittsburgh. But life keeps marching. Laraine Day, of the screen, divorced her husband on Jan. 20 in Los Angeles and called it down by divorcing him on Jan.

in Juarez, Mex., and on that same day popped over to El Paso, Tex., and married a ("Lippy") Durocher, manager of the Brooklyn Dodgers. A Los Angeles judge thought all this activity was excessive, and made a fuss.

France demands German coal and steel in Ruhr be transferred to United Nations ownership and operation.

Thomas W. Lamont gives \$500,000 for restoration of bomb-damaged Canterbury Cathedral in England.

Gerhart Elsler accused by House committee of being Soviet master-mind of Communists in U. S.

Rocky Graziano barred from New York prize-fight ring for failing to report \$100,000 bribe offer to fix two bouts.

Senator Arthur H. Vandenberg says he is not a candidate for President in 1948.

England has coal famine; shuts off electricity to half the nation's industries, making millions idle.

Peace treaties for Italy, Rumania, Bulgaria, Hungary and Finland are signed in Paris.

Navy Antarctic expedition finds muddy pea-green lakes and bare hills in South Polar continent.

Chinese currency virtually worthless in Shanghai as inflation skyrockets; one American dollar costs 19,000 Chinese dollars.

Security Council approves U. S. stand on separating disarmament from atomic control, rebuffing Russia.

53 die in plane crash in Bogotá; worst commercial aviation disaster.

British capture twenty-second shipload of Jewish refugees trying to smuggle themselves into Palestine, and deport them to Cyprus.

British royal family arrives in Capetown for state visit to Union of South Africa.

Britain announces she will withdraw from India by June, 1948, regardless of whether India has established a government.

Cuba arrests "Lucky" Luciano, former New York vice boss who had been convicted, later freed from prison and deported to Italy by Governor Dewey.

U. S. and British arrest hundreds of Nazi fanatics in occupied Germany, smashing an underground ring.

Largest U. S. teachers' strike starts in Buffalo, 2,400 out, closing 80 schools.

German de-Nazification court sentences Franz von Papen to eight years at hard labor.

Russia supports U. S. claim to possession of Japanese mandated islands in Pacific under Security Council trusteeship.

26 Truman appoints Lewis W. Douglas ambassador to England.

27 Herbert Hoover, back from survey of Germany, urges U. S. spend \$475,500,000 in eighteen months to keep Germans from starving.

28 France, England announce 50-year treaty of alliance.

Army P-82 Twin Mustang fighter plane flies 5,000 miles non-stop from Hawaii to New York in 14 hours, 33 minutes.

DIED: Admiral Marc A. Mitscher, 60; O. Max Gardner, 64; Kenneth C. Hogate, 49; Harry K. Thaw, 76; Colonel Robert Stewart, 80; J. B. Powell, 60.

MARCH

THE UNITED STATES grew tired of seeing small nations sucked into the Soviet orbit. So the "Truman Doctrine" was born—America would strengthen Greece and Turkey with money and war materials to fend off chaos and Communism. At home our school teachers said they needed help, too; they had to take jobs as bartenders, etc., to keep from starving on their low salaries. In Boston, Judge Donahue ruled that Kathleen Winsor's novel, "Forever Amber," was not too impure to be sold; he said ten minutes of it had put him to sleep. In New York City, a bus driver, who had been plugging around the same dreary route in the Bronx for 16 years, did what every drudge dreams of doing. He cut loose one morning and drove the doggone bus right down to Florida. Weirdest of all was the tale of the two Collyer brothers—aged hermits who crammed their Fifth Avenue house so full of junk that nobody but they could get in. On March 21 the police found emaciated brother Homer sitting dead among the junk on the second floor. No sign of brother Langley. (*See next month.*)

2 Twenty-two killed in week-end terrorist attacks by Jewish underground in Palestine.

3 Barbara Hutton takes fourth husband in Zurich—Prince Igor Troubetzkoy. Mayor William O'Dwyer ousts Edward V. Loughlin as leader of Tammany Hall; sponsors Frank J. Sampson to clean up.

5 Soviet Russia rejects U. S. plan for control of atomic energy by United Nations.

6 Supreme Court finds John L. Lewis guilty of contempt for failing to call off coal strike in November.

9 Nation's second oldest strike ends, as U. A. W. workers return to J. I. Case Co. after fourteen months.

10 Big Four Council of Foreign Ministers begins Moscow meeting to draw up peace treaties for Germany and Austria.

- 12 Truman asks Congress for \$400,000,000 to save Greece and Turkey from Communist expansionism.
 - 16 Margaret Truman, 23-year-old daughter of the President, makes professional singing debut on radio from Detroit.
 - 18 British floods are the worst in memory.
 - 19 Georgia Supreme Court ousts Herman Talmadge as governor and says Melvin E. Thompson is rightful governor; Talmadge moves out, muttering.
John L. Lewis surrenders unconditionally to Supreme Court and calls off coal strike set for April 1.
Chiang Kai-shek's troops capture Yenan, capital of Chinese Communists in Shensi province.
 - 21 Congress outlaws labor union lawsuits for back portal-to-portal pay, ending \$5,000,000,000 threat to industry.
Congress approves constitutional amendment to limit future Presidents to two terms; it goes to states for ratification.
 - 22 Truman orders check of all Federal employees to find out whether they should be discharged because of Communist affiliations.
 - 25 Russia uses veto for tenth time in Security Council to protect Albania from charge she planted mines that blew up British destroyers.
111 men die in mine explosion in Centraulia, Ill.
 - 26 Russia boycotts opening session of United Nations Trusteeship Council.
 - 31 Draft law expires; many war-time controls go off. Sugar rationing stays.
- DIED:** Carrie Chapman Catt, 88; W. S. Burgess, 68; Bishop James De Wolf Perry, 76; William C. Durant, 85; Johnny Evers, 65.

APRIL

NOT UNTIL APRIL 8 did the police find Langley Collyer. They found him just nine feet away from the spot where his blind brother Homer had sat in death. Old Langley had died first; he had been crawling through a tunnel in the junk to feed Homer; the junk crashed down on him and crushed him. Homer never got his food. In Hollywood, Frank Sinatra punched a newspaper columnist, Lee Mortimer, sending him briefly to the hospital. America's phones went silent because of a strike. A man in New York couldn't telephone his wife in suburban White Plains to say he had missed the last train home; so for \$30 he phoned his aunt in Ireland and got her to phone his wife in White Plains. England was so harassed by the underground warfare of Jewish terrorists that she dumped the whole 2,000-year-old Palestine problem

into the lap of the United Nations. The month was a cheerful one for workers in America's mass production industries; they got 15 cents an hour more just by threatening to strike.

- 1 King George II of Greece dies of heart attack. His brother, Paul, takes throne.
Chicago elects Martin H. Kennel Democrat, mayor.
Mayor O'Dwyer recommends record New York City budget, \$1,029,120,314.
- 2 England asks United Nations to solve Palestine problem.
Security Council approves U. S. trusteeship of former Japanese-mandated Pacific islands.
- 7 Telephone strike by 300,000 workers 42 states cuts service to emergency basis.
- 9 Leo Durocher, manager of Brooklyn Dodgers, suspended for one year from baseball by A. B. Chandler, baseball commissioner.
United Nations Security Council votes 8 to 0 (Russia abstaining) to put up International Court of Justice question of Albania's guilt in Corfu Channel mines that killed Britons.
Greece opens offensive against guerrilla rebels in the north.
Senate confirms nomination of David Lillenthal and four other members U. S. Atomic Energy Commission, 50-31, after ten-week fight.
- 10 Tornado rips through western Texas and Oklahoma, killing 132.
- 12 Vandenberg denounces Henry Wallace for campaigning in England against "U. S. imperialism."
- 14 General Motors settles wage dispute with United Electrical Workers (C. I. O.) with 15-cent an hour wage increase setting pattern for industries.
- 16 Milton Reynolds completes record flight around world—78 hours, 55 minutes and 40 seconds.
British hang Dov Bela Gruner and three other Jewish terrorists in Palestine.
Nitrate ship *Grandcamp* blows up near Texas City, Tex.; 468 killed; \$50,000,000 damage.
- 18 Security Council disapproves, 4 to 3, Russia's demand that a U. N. Commission supervise U. S. aid to Greece.
British blow up naval installations Helgoland, former German fortress island in the North Sea.
- 21 Truman calls for voluntary price reductions to avoid a depression.
- 22 Senate passes bill for \$400,000,000 aid to Greece and Turkey to bolster fight against Communism. Vote is 67 to 2.

Council of Foreign Ministers ends Moscow meeting, after failing to agree on peace terms for Germany or Austria, or on four-power pact against German rearmament.

House cuts Interior Department appropriation bill 45 percent.

Socialists make large gains in Japanese parliamentary election.

First special session of U. N. General Assembly meets in New York to study Palestine problem.

Siam is admitted as 55th member to United Nations.

President Miguel Alemán of Mexico arrives in Washington for nine-day visit.

DIED: Charles S. Whitman, 78; Henry Ford, 83; Benny Leonard, 51; King Christian X of Denmark, 76; Lewis E. Lawes, 63; Willa Cather, 70; Evalyn Walsh McLean, 60; Prof. Irving Fisher, 80.

MAY

THERE WAS a remarkable growth of racial tolerance—at least in the public mints. Climbing to the top of the best-seller list was Laura Z. Hobson's "Gentleman's Agreement," which blistered anti-Semitism. And Sinclair Lewis won new thousands of readers with "Kingsblood Royal," which turned his burning scorn on anti-Negro bias. But in South Carolina, a jury solemnly listened to the statements of two dozen white men describing the lynchings of a Negro; and the jury solemnly acquitted every defendant. Up north in Massachusetts the 300-year-old town of Woburnport went valiantly to war against the high cost of living. Its merchants cut retail prices 10 percent. The idea spread round the country like a prairie fire. But the fire fizzled out when wholesalers quietly refrained from cutting their prices. Clearly, inflation remained top dog.

U. S. indicts 24 top officials of the I. G. Farbenindustrie in Germany as war criminals.

U. N. Military Staff Committee makes first report looking toward a world police force.

Socialist Premier Paul Ramadier ejects all five Communists from Cabinet.

Jewish terrorists blast open British prison at Acre, Palestine, freeing 200 inmates, mostly Arabs.

Dr. Franklin Bicknell, noted British physician, says England is slowly dying of starvation.

100,000 workers in Hamburg, Germany, stage, four-hour demonstration against starvation rations.

13 Senate passes Taft-Hartley labor bill restricting unions, 68 to 24.

German de-Nazification court finds Hjalmar Schacht guilty of war crimes; sentences him to eight years in prison.

14 U. S. takes emergency measures to rush grain to Germany, where rations drop to as low as 800 calories a day.

Senate passes foreign relief bill of \$350,000,000, 79 to 4.

15 Congress approves final version of \$400,000,000 program to bolster Greece and Turkey against Communism.

United Nations General Assembly ends first special session after voting, 46 to 7, for 11-nation inquiry committee on Palestine.

17 Truman flies to Missouri to bedside of sinking 94-year-old mother.

60-passenger Lockheed airliner breaks record, flying from Burbank, Calif., to Miami in 6 hrs., 54 min., 57 sec.

20 Mayor O'Dwyer suspends Elmer Haslett, New York City director of airports, as reports of scandal grow.

Sun goes under eclipse in Brazil, and U. S. scientists in Bocayuva get a cloudless view.

21 All 28 defendants in South Carolina mass lynching trial acquitted, despite statements confessing participation.

23 U. N. Balkan inquiry commission finds Yugoslavia, Bulgaria and Albania blame-worthy for aiding Greek guerrilla forces waging civil war.

26 Revolution in Nicaragua; General Anastasio Somoza seizes power.

29 United Air Lines, DC-4, crashes taking off from LaGuardia field; 42 lives lost. Communist coup d'état forces Hungary's Premier to resign.

30 Eastern Air Lines, DC-4, crashes in Maryland, killing all 53 aboard.

31 Abd el-Krim, prisoner of the French for twenty years, escapes to sanctuary in Egypt.

DIED: Louise Homer, 76; Frederic W. Goudy, 82; The Most Rev. Michael J. Curley, 67; The Earl of Harewood, 64; Perry Belmont, 96; General Evans F. Carlson, 51; Hal Chase, 64.

JUNE

STILL THE CLOUD of Communism blackened the skies of Europe. So the Marshall plan was born—America recognized the need of extending help in a vast way, if only the nations of Europe would first draw up a unified reconstruction program. At home, the Republican Congress gave birth to its two bouncing legislative babies:

a bill to cut income taxes; and a bill to curb the power of labor unions. Truman vetoed both. He had his way about keeping income taxes stiff. But Congress over-rode him and enacted the Taft-Hartley Labor Control Bill. Add high-cost-of-living items: the price for adopting a baby in the Brooklyn black market went up to \$2,500. The black market price for a new Cadillac sedan was \$4,675; the list price was \$2,386 plus accessories. And in far away Australia, man repealed a law of nature. Scientists flew over an innocent white cloud, sprinkled "dry ice" on it, made it rain all afternoon.

- 1 Truman commission recommends year's compulsory military training for youths between 18 and 20.
- 3 Long feud between U. S. and Argentina is settled; U. S. offers reconciliation to Perón regime.
- 4 Frank Hague announces retirement as Mayor of Jersey City, leaving job to his nephew.
- 5 U. S. Senate ratifies peace treaties with Italy, Hungary, Rumania and Bulgaria. Secretary Marshall says U. S. may have to spend billions to put Europe on its feet economically.
- 8 Eva Perón, wife of Argentina's President, gets gala welcome on visiting Spain; gives Fascist salute.
- 9 Mississippi River breaks 6 levees; floods a million farm acres; drives 22,000 persons from homes.
- 10 Truman visits Canada; gets ovation in Ottawa.
- 11 U. S. ends sugar rationing, last of the war-time ration controls.
U. S. protest accuses Russia of "flagrant interference" in Hungary; demands three-power investigation.
- 12 Communist coup in Bulgaria ousts 23 opposition deputies in Parliament.
- 13 Chicago-Washington, DC-4, hits Blue Ridge mountain in West Virginia, killing all 50 aboard.
- 15 Henry Wallace predicts war if Russia threatens oil of Saudi Arabia.
- 17 Truman vetoes income tax reduction bill; House upholds veto.
- 21 Longest Senate filibuster in twenty years holds up vote on whether to override Truman veto of labor bill.
- 23 Senate overrides labor veto, 68 to 25, enacting severest curbs on unions in fifteen years.
- 24 General Eisenhower accepts presidency of Columbia University, to take effect early in 1948.
- 27 Foreign Ministers of England, Russia and France meet in Paris to map European reconstruction, hoping for U. S. aid suggested by Marshall.

28 Douglas Chandler is convicted of treason in Boston for having broadcast for Nazis during the war.

- 30 United Nations Relief and Rehabilitation Administration officially ends after spending nearly 3 billion dollars in four years to aid 17 countries.

Truman signs bill extending rent control, but denounces the measure for permitting increases.

DIED: Maxwell E. Perkins, 62; Jim Tully 56; Dr. Albert Shaw, 89; Lucius Boomer 68; Bronislaw Huberman, 64.

JULY

WE REALLY GOT BACK to normal—had a silly season just like before the war. People in forty-four states reported seeing luminous "flying saucers" that scooted through the night sky at tremendous speeds. Were they a secret weapon developed by the U. S.—or was Russia bombarding us? Finally the Army captured one on the ground in New Mexico; it was an innocent, shiny weather balloon. We al-panted for income tax reduction, and Congress passed it twice; but President Truman vetoed it both times. Sixteen nations of Europe put their heads together to find out how much help they needed from the U. S. under the Marshall plan, but Russia sneered; wouldn't attend the conference, wouldn't let the Poles, the Finns, the Hungarians, the Rumanians, the Bulgarians participate either. A horrible new dance was invented—the "Rhum boogie," combining the worst features of jitterbug and rhumba. You still had to know somebody, or grease somebody's palm to get a new car; but there were 36 million cars rolling in the U. S.—an all-time high.

- 3 Andrew J. May, war-time chairman of House Military Affairs Committee is convicted of accepting money from Henry and Murray Garsson, munition makers, for using his influence in their behalf. Garssons also convicted.
- 6 Generalissimo Franco holds plebiscite in Spain to ratify his dictatorship; wins by large margin.
- 7 Coal strike averted as United Mine Workers win biggest pay boosts in history—44½ cents an hour.
- 9 Greece jails 3,000 to foil a supposed Communist revolution.
- 11 Egypt asks United Nations to oust British troops from its territory.
- 12 Paris conference on Marshall plan to reconstruct Europe opens with sixteen nations attending and eight nations boycotting at behest of Russia.
- 15 U. S. policy for Germany revised to encourage revival of German industry.
- 18 Truman again vetoes income tax reduction bill; Senate upholds the veto.

- 1 Dutch troops launch offensive in Java against native Indonesian Republic. British seize 4,500 illegal Jewish immigrants to Palestine from steamer *Ezodus* 1947 and ship them back to France.
- 2 Russia rejects U. S. invitation to 11-nation conference on peace treaty with Japan.
- 3 Congress passes bill to merge U. S. armed forces under a single Secretary of Defense. Kenneth C. Royall becomes Secretary of War, succeeding Robert P. Patterson.
- 4 Eightieth Congress adjourns first session for longest Congressional vacation since 1938. More than 18,000 Lincoln papers made public first time, casting new light on Civil War era.
- 5 Two British Army sergeants found hanged in Palestine by Jewish underground terrorists of the Irgun Zvai Leumi.

IED: Herbert L. Satterlee, 83; Walter Donaldson, 53; Samuel G. Blythe, 79; Mary Ware Dennett, 75; Mrs. Martha Ellen Truman, 94.

AUGUST

THE WOMEN OF AMERICA were in an uproar. From Paris came the new fall styles—the padded hips and the long, long skirt. What to do? Defy fashion? Or burn up your wardrobe and nick the old man for the dough to buy a whole new flock of frocks? Hollywood denounced the new fashion; it would make new movies look shoddy by the time they came out. The government was sore, because it would have to buy new uniforms for Wacs and WAVes. But Paris had its way. Britain was going broke—no U. S. dollars to buy food with; meat ration was cut to 20 cents' worth a person, a week. A Colorado dentist made a great discovery—why women all over the country were getting ugly notches in their teeth; they used the fangs to open their bobby pins. Russia flung vetoes all over the place in the Security Council, thwarting the effort to bring peace to the Balkans. Impetuous Americans began tinkering with the weather; fliers scattered dry ice on clouds to make it rain; one flyer caught hell from his wife when his rain soaked her washing. A new nation was born—Pakistan—when India was split in two. And the Gallup poll discovered that less than a third of U. S. families say grace at meals.

- 1 U. S. Security Council orders Dutch and Indonesians to cease hostilities in Java.
- 2 Howard Hughes takes stand in Senate inquiry; denies waste in war-time plane

contracts; accuses Senator Owen Brewster of blackmailing him with the inquiry.

- 10 William F. Odom flies around the world alone in fastest time ever—18,645 miles in 73 hours, 5 minutes.
- 11 Construction of first peace-time atomic-energy pile begins at Brookhaven, L. I., nuclear research center.
- 14 U. S. cancels one billion dollar war claim against Italy, hoping to ward off Communism there.
- 15 Freedom comes to India, split into two states—the Dominions of India (mostly Hindu) and Pakistan (mostly Moslem).
- 16 Greek guerrilla rebels announce setting up "free Communist" state in northern Greece.
- 17 Federal Trade Commission accuses major steel companies of unlawful conspiracy to fix prices, crush competition.
- 18 U. S. sues largest tire companies under anti-trust law for monopoly practices and price fixing. U. S. begins to fingerprint 1,900,000 Federal employees in check of their loyalty.
- 19 Two Russian vetoes kill Security Council effort to resolve Balkan crisis involving Greece, Bulgaria, Yugoslavia and Albania.
- 20 U. S. court in Nuremberg sentences Hitler's physician and six others to hang for ghastly war-time experiments on humans. U. S. eases provision of loan to British, allowing them to halt conversion of pounds into dollars.
- 22 Taft-Hartley labor law goes into effect. International Typographical Union will sign no more employment contracts.
- 23 President of Ecuador, Dr. J. M. Velasco Ibarra, is overthrown by military revolt and driven into exile in Colombia; Col. Carlos Mancheno becomes dictator.
- 24 Ford increases car and truck prices from \$20 to \$97.
- 27 England cuts meat ration to 20 cents a person a week to keep from bankruptcy; bans all pleasure motoring. U. S. puts on trial in Nuremberg, twenty-four top officials of the I. G. Farbenindustrie as war criminals.
- 28 England and U. S. agree to increase German steel production and industry to 1936 levels. Russia and France protest.
- 29 U. S. announces development of "tame" atom bomb which produces controlled energy.
- 31 United Nations committee recommends partitioning Palestine into independent Arab and Jewish states bound by economic union, in 1949.

Hungarian election gives Communists victory; called worst fraud in nation's history.

DIED: Herbert Asquith, 66; George C. Atcheson, Jr., 50; Prince Eugen, 82; Lt. Gen. James G. Harbord, 81; Theodore G. Bilbo, 69; Mrs. Thomas A. Edison, 82; Mrs. William K. Vanderbilt, 50.

SEPTEMBER

UP SHOT THE COST of living—higher than ever before in U. S. history. A dozen eggs cost a dollar; so did a pound of butter; so did a pound of porterhouse steak. One trouble was that Americans were eating more meat than they had eaten for a generation—155 pounds a person a year. Another trouble was that bad weather and war hangover had left Europe dangerously low on food. America had to share its grain to keep people abroad from starving; President Truman launched a save-the-food campaign for voluntary conservation. New York City had its first female gang fight; 500 girls clawed, punched and pulled hair in the streets because one gang of bobby-soxers had invaded the territory of another gang in search of boy friends. The boys watched the fight, cheering. Never was the United Nations less peaceful, less united; Russia accused the United States of warmongering, and asked the General Assembly to spank us soundly. Churches in Pennsylvania came within a hair of violating the election laws; their chimes played "Onward Christian Soldiers" all day long while people went to the polls to vote on local prohibition; but they didn't play the victory hymn, "Praise God From Whom All Blessings Flow" that night as planned, because the wets won. College gates opened and 2,500,000 education-hungry Americans flocked in—a million more than before the war.

- 1 Doris Duke is married to Porfirio Rubirosa of the Dominican Republic.
- 2 Nineteen nations of the Americas sign Treaty of Rio de Janeiro, promising to help each other put down aggression. Veterans of World War II flock to cash terminal leave bonds totaling \$1,800,000,000.
- 3 U. S. offers to share with all nations radio-active isotopes, by-products of atomic energy, for medical research.
- 6 French foil Jewish terrorist plot to drop six homemade bombs on London.
- 8 Navy reveals it fired sixteen-ton German V-2 rocket from carrier *Midway*.
- 9 Two-hour battle at Hamburg as British disembark *Exodus* Jewish refugees, and send them to camps.
- 10 Secretary Marshall says U. S. must go to Europe's rescue quickly to prevent

"intolerable hunger and cold" this winter.

- 11 Food prices in U. S. reach new record high levels.
 - 13 John Dos Passos loses an eye and his wife is killed when he drives their car into parked truck.
 - 14 Officials announce 4,000,000 have made forced migrations as result of division into Pakistan and India.
 - 15 Peace treaties for Italy, Rumania, Hungary, Bulgaria and Finland go into effect at midnight.
 - 16 Second annual session of U. N. General Assembly opens at Flushing Meadows Park, New York City.
 - 17 U. S. asks Assembly to take over problems which Security Council failed to solve because of Russia's veto. Hurricane sweeps southern Florida, doing \$12,000,000 damage, taking only four lives.
 - 18 Russia accuses U. S. of instigating propaganda for a third world war; asks U. N. to stop us.
 - 22 First automatic flight across Atlantic. Army C-54 flies 14 from Newfoundland to England with no human finger on the controls, including take-off and landing. Sixteen European nations complete 1 Paris their report on Marshall Plan, saying Europe will need \$15.8 billion in credits from U. S. in next four years.
 - 23 Bulgaria hangs Nikola Petkov, leader of opposition Agrarian party; U. S. condemns "travesty on justice." National Labor Relations Board starts first two legal actions to restrain unions under new Taft-Hartley labor law.
 - 25 Truman urges Americans to waste less food; to save it for relief of European starvation.
 - 26 Britain announces she will evacuate troops from Palestine unless U. N. Assembly finds a solution.
 - 27 Robert E. Hannegan resigns as chairman of the Democratic National Committee; Senator J. Howard McGrath, Rhode Island, will succeed him.
 - 29 Truman asks key Congressional committees to assemble early to consider \$580,000,000 stopgap aid for Europe ward off starvation. Britain names Sir Stafford Cripps virtual economic dictator to pull nation out of slump.
 - 30 Russia refuses permission for ten Senators, investigating conditions in Europe to enter Soviet Union.
- DIED:** Mary E. Woolley, 84; Lt. Gen. Robert L. Bullard, 86; Richard Le Gallienne, 81; John O'Hara Cosgrave, 8; Fiorenzo H. LaGuardia, 64.

OCTOBER

THE NATION had the jitters about all those home-grown Communists in our midst. Why, they were even tinkering with our movies! Ten screen writers, hauled before a congressional investigation in Washington, refused to say whether they were or were not Communists, and the committee cited them for contempt. U. S. Steel discovered that it had made a mere \$97,000,000 in the first nine months, so upped its dividend to \$5; its last previous big dividend boost had been on Oct. 28, 1929—the day of the great stock market crash. To save grain for starving Europe, we had meatless Tuesdays and eggless and poultryless Thursdays; but somebody pointed out that the best way to keep a chicken from eating grain was to eat the chicken, so poultryless Thursday was abolished. Igor Stravinsky, a great composer, came down out of the clouds and adapted his *Firebird* ballet to catch the juke box coins. And the Methodist Board of Temperance was shocked to its toes when Admiral Halsey said as a rule he doesn't trust a fighting man who doesn't smoke or drink.

1 Truman asks U. S. to save 100,000,000 bushels of grain to keep Europe from starving.

3 The American Association of Scientific Workers appeals to U. N. General Assembly for a study of bacteriological warfare.

5 Moscow announces formation of new Communist international organization aimed at U. S. "imperialism."

Truman calls for meatless Tuesdays, eggless and poultryless Thursdays to save grain for Europe.

7 State Department will dismiss employees even suspected of associating with Communists.

8 Dr. Oscar Ivanissevich, Argentina's Ambassador to the U. S. announces that Argentina has set up a "Marshall Plan" to aid its Latin American neighbors.

9 U. S. reveals pilotless rocket plane attained speed of 1,500 miles an hour.

1 U. S. backs United Nations plan for partitioning Palestine.

3 Distillers agree to sixty-day shutdown to save grain for Europe.

4 A. F. of L. abolishes John L. Lewis' vice presidential post to keep him from barring federal unions from labor board protection.

Queen Wilhelmina announces her temporary retirement because of illness until Dec. 1. Crown Princess Juliana will assume crown as Princess Regent for the interim.

16 General Eisenhower issues another statement saying he "neither seeks nor desires political office."

18 James C. Petrillo, President of Musicians' Union, bans making of any records after Dec. 31.

19 General De Gaulle's new political movement wins French elections, beating Communists.

20 House Un-American Activities Committee hears eighteen movie writers and directors are Communists.

U. N. General Assembly adopts new flag.

21 United Nations Assembly, overriding Russia, votes commission to keep peace in Balkans.

Brazil and Chile break diplomatic relations with Soviet Russia.

22 Iran's Parliament voids Premier's 1946 promise of oil concession to Russia.

23 Nobel Prize in medicine is awarded jointly to Dr. Carl F. Cori and his wife, of St. Louis, and to Dr. Bernardo Alberto Houssay, of Buenos Aires.

24 Forest fire sweeps Bar Harbor, Maine, destroying palatial summer estates.

United Air Lines DC-6 catches fire in air, crashes in Utah, killing all 52 aboard.

Senator Robert A. Taft announces he is candidate for Republican nomination for President.

25 Poland says Stanislaw Mikolajczyk, opposition leader, has fled the country.

26 Bodies of 6,248 U. S. soldiers killed in Europe arrive in New York, starting the return of war dead to East Coast.

27 U. N. calls on all nations to encourage peace propaganda.

28 Congressional inquiry into Communism in Hollywood cites screen writers for contempt for failing to say whether they were Communists.

29 Truman committee reports wide violation of civil rights in U. S.; urges immediate legislation to end segregation and discrimination practiced against racial and religious minorities.

30 U. N. creates commission to go to Korea to prepare for its independence.

31 Nobel Peace Prize for 1947 is awarded to two Quaker organizations—American Friends Service Committee at Philadelphia, and the Service Council at London.

DIED: James Gambell Rogers, 80; Dr. Max Planck, 89; Samuel Hoffenstein, 57; Major General Blanton Winship, 77; General Sir Ian Hamilton, 94; Sidney Webb, 88; John Henry Titus, 94; Bob Crosby, 50; Earl Larimore, 48; Dudley Digges, 68; Mrs. Frances Folsom Cleveland Preston, 83.

NOVEMBER

IN THIS Anno Domini 1947, thousands of girls, aged twenty-one, got married to boys, aged twenty-five. But only one bride and bridegroom had a wedding cake 9-feet high, weighing 500 pounds, containing five and a half pints of liquor. Only that one girl-boy combination had a dozen AP correspondents frantically cabling accounts of the wedding. Only one bride had a specially constructed pair of stockings which would not "ladder" when she knelt in Westminster Abbey. . . . Elizabeth was married to Philip. It was lovely to have so much fuss; it took people's minds off: 1) Communist riots in Italy and France; 2) the probable failure of the Allies to agree on peace for Germany and Austria; and 3) the fact that the world over, little tokens we used to call money didn't mean much.

- 1 British Conservative party sweeps local elections. First Labor rebuff.

Man o' War, best known horse in America, dies at age of thirty.

- 2 Howard Hughes files world's biggest plane, built for 500 passengers.

- 3 U. N. Assembly votes condemnation of all war propaganda.

Maxwell M. Hamilton, U. S. Minister to Finland, resigns his post.

Stanislaw Mikolajczyk, leader of Poland's Peasant party which opposed Communist domination, flies to England to avoid being "killed like a sheep."

- 5 U. N. Assembly approves sending commission to Korea to set up free government; Russia boycotts it.

- 6 Molotov says secret of the atomic bomb "has long ceased to exist."

- 9 Bloodless revolution in Siam; former Japanese puppet dictator, Luang Pibul Songgram, takes power in coup.

- 10 Secretary Marshall asks Congress for \$597,000,000 winter relief for France, Italy and Austria.

- 11 Britain orders labor draft of "Spivs" and drones into essential industry.

Walter P. Reuther wins full control of United Automobile Workers (CIO), defeating Communist faction.

- 12 Senate discovers that Maj. Gen. Bennett E. Meyers, second ranking A. A. F. procurement officer during the war, bought \$400,000,000 in war bonds.

- 13 Hugh Dalton dropped as Britain's Chancellor of the Exchequer because he told newspaperman of the budget.

Nobel prize for literature goes to André Gide, French novelist. Physics prize goes to Sir Edward Victor Appleton; chemistry prize to Sir Robert Robinson.

A. F. of L. International Labor Relations Committee forms the *Deminform* to combat the *Cominform*.

- 17 Truman asks for power to revive price controls and rationing if necessary.

23 nations agree to make tariff cuts affecting 65 percent of world trade.

- 19 Premier Paul Ramadier of France resigns.

- 20 Princess Elizabeth of England is married to Lt. Philip Mountbatten.

- 22 Robert Schuman, a Populist Republican becomes Premier of France.

- 25 Big Four Council of Foreign Ministers meets in London in another attempt to frame peace for Germany and Austria.

- 26 Senate kills watered-down measure for E. R. P.

- 29 U. N. Assembly approves partitioning of Palestine.

DIED: John G. Winant, 58; John Bassett Moore, 86; Mrs. Belloc Lowndes, 80; Lincoln Colcord, 64; James J. Davis, 74

Postscript

EACH YEAR is like a serial story. It gives clues about what may happen next but it leaves you with tantalizing mysteries. Had anyone made a list of the puzzling questions in the year 1920, it would make interesting reading now. We have made up the Twenty Questions of 1947. Here they are

1. Will there be a war between Russia and the U. S.?
2. Will my salary be raised to meet the High Cost of Living?
3. Has John L. Lewis been licked?
4. Does Eisenhower really want to be President?
5. Can the Chinese Communists overthrow Chiang Kai-shek?
6. Why do women buy New Look dresses just because Paris tells them to?
7. Will the Arabs fight?
8. Will my income tax ever go down?
9. Will the United Nations survive?
10. Why do postwar men's shirts wear out so quickly?
11. Will James Caesar Petrillo's recording ultimatum herald a musical-less age?
12. Has Russia really got it?
13. When can I buy a new car—washing machine—refrigerator?
14. Were those ten Hollywood writers really Commies?
15. Who is really getting rich out of the present HCL?
16. Who told Windsor and Wallie that they were not invited to the wedding?
17. How many more U. S. officers were absorbed in personal financial matters during the war?
18. Will Laura Z. Hobson's "Gentleman Agreement" really help?
19. Who will succeed Josef Stalin?
20. Is another U. S. Depression coming?

THE UNITED STATES OF AMERICA

THE DECLARATION OF INDEPENDENCE IN CONGRESS, JULY 4, 1776

The unanimous DECLARATION of the thirteen united STATES OF AMERICA.

WHEN, in the course of human events, it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them, a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation.

We hold these truths to be self-evident that all men are created equal, that they are endowed, by their Creator, with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed, that whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and institute new government, laying its foundation on such principles, and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness. Prudence, indeed, will dictate that governments long established, should not be changed for light and transient causes; and accordingly all experience hath shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security. Such has been the patient sufferance of these Colonies, and such is now the necessity which constrains them to alter their former systems of government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute tyranny over these States. To prove this, let facts be submitted to a candid world.

He has refused his assent to laws, the most wholesome and necessary for the public good.

He has forbidden his governors to pass laws of immediate and pressing importance, unless suspended in their operation till his assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

He has refused to pass other laws for the accommodation of large districts of people, unless those people would relinquish the right of representation in the legislature, a right inestimable to them, and formidable to tyrants only.

He has called together legislative bodies at places unusual, uncomfortable, and distant from the depository of their public records, for the sole purpose of fatiguing them into compliance with his measures.

He has dissolved representative houses repeatedly, for opposing with manly firmness his invasions on the rights of the people.

He has refused for a long time, after such dissolutions, to cause others to be elected, whereby the legislative powers, incapable of annihilation, have returned to the people at large for their exercise; the State remaining, in the meantime, exposed to all the dangers of invasion from without, and convulsions within.

He has endeavored to prevent the population of these States; for that purpose obstructing the laws for naturalization of foreigners; refusing to pass others to encourage their migrations hither, and raising the conditions of new appropriations of lands.

He has obstructed the administration of justice by refusing his assent to laws for establishing judiciary powers.

He has made judges dependent on his will alone, for the tenure of their offices, and the amount and payment of their salaries.

He has erected a multitude of new offices, and sent hither swarms of officers to harass our people, and eat out their substance.

He has kept among us, in times of peace, standing armies, without the consent of our legislatures.

He has affected to render the military independent of and superior to the civil power.

He has combined with others to subject us to a jurisdiction foreign to our constitution and unacknowledged by our laws; giving his assent to their acts of pretended legislation:

For quartering large bodies of armed troops among us:

For protecting them, by a mock trial, from punishment for any murders which they should commit on the inhabitants of these States:

For cutting off our trade with all parts of the world:

For imposing taxes on us without our consent:

For depriving us, in many cases, of the benefits of trial by jury:

For transporting us beyond seas to be tried for pretended offenses:

For abolishing the free system of English laws in a neighboring province, establishing therein an arbitrary government, and enlarging its boundaries, so as to render it at once an example and fit instrument for introducing the same absolute rule into these colonies:

For taking away our charters, abolishing our most valuable laws, and altering fundamentally the forms of our governments:

For suspending our own legislatures, and declaring themselves invested with power to legislate for us in all cases whatsoever.

He has abdicated government here, by declaring us out of his protection, and waging war against us.

He has plundered our seas, ravaged our coasts, burnt our towns, and destroyed the lives of our people.

He is, at this time, transporting large armies of foreign mercenaries to complete the works of death, desolation, and tyranny, already begun, with circumstances of cruelty and perfidy, scarcely paralleled in the most barbarous ages, and totally unworthy the head of a civilized nation.

He has constrained our fellow citizens, taken captive on the high seas, to bear arms against their country, to become the executioners of their friends and brethren, or to fall themselves by their hands.

He has excited domestic insurrections amongst us, and has endeavored to bring on the inhabitants of our frontiers, the merciless Indian savages, whose known rule of warfare is an undistinguished destruction of all ages, sexes, and conditions.

In every stage of these oppressions we have petitioned for redress in the most humble terms: our repeated petitions have been answered only by repeated injury. A prince whose character is thus marked by every act which may define a tyrant, is unfit to be the ruler of a free people.

Nor have we been wanting in attentions to our British brethren. We have warned them: from time to time, of attempts by their legislature to extend an unwarrantable jurisdiction over us. We have reminded them of the circumstances of our emigration and settlement here. We have appealed to their native justice and magnanimity, and we have conjured them by the ties of our common kindred to disavow these usurpations, which would inevitably interrupt our connections and correspondence. They too have been deaf to the voice of justice and of consanguinity. We must, therefore, acquiesce in the necessity which denounces our separation, and hold them, as we hold the rest of mankind, enemies in war, in peace friends.

WE, therefore, the Representatives of the United States of America, in General Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do in the name, and by authority of the good people of these Colonies, solemnly publish and declare, That these United Colonies, are, and of right ought to be, *free and independent States*; that they are absolved from all allegiance to the British crown, and that all political connexion between them and the State of Great Britain, is, and ought to be, totally dissolved; and that as *free and independent States*, they have full power to levy war, conclude peace, contract alliances, establish commerce, and to do all other acts and things which *independent States* may of right do. And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honour.

IN CONGRESS }
JANUARY, 18, 1777. }

Ordered:

That an authenticated copy of the Declaration of Independency, with the names of the Members of Congress subscribing the same, be sent to each of the United States, and that they be desired to have the same put on record.

By order of Congress.

Attest, CHAS. THOMSON,
Secy.

A true copy.
JOHN HANCOCK,
Presidt.

JOHN HANCOCK,
President.

As early as August 12, 1776, the legislature of North Carolina authorized its delegates to the Continental Congress to join with others in a declaration of separation from Great Britain; the first colony to instruct its delegates to take the actual initiative was Virginia on May 15. On June 7, 1776, Richard Henry Lee of Virginia offered a resolution to the Congress to the effect "that these United Colonies are, and of right, ought to be, free and independent States. . . ." A committee, consisting of Thomas Jefferson, John Adams, Benjamin Franklin, Robert R. Livingston, and Roger

Sherman was organized to "prepare a declaration to the effect of the said first resolution." The Declaration of Independence was adopted on July 4, 1776.

Most delegates signed the Declaration August 2, but George Wythe (Va.) signed August 27; Richard Henry Lee (Va.), Elbridge Gerry (Mass.) and Oliver Wolcott (Conn.) in September; Matthew Thornton (N. H.), not a delegate until September, in November; and Thomas McKean (Del.), although present on July 4, not until 1781 by special permission, having served in the army in the interim.

THE RISE OF THE UNITED STATES

by ARTHUR M. SCHLESINGER, SR.

1. Under the English Flag

The land now comprehended within the United States once belonged to Spain, France, England, Holland and Sweden. Spain, colonizing from Mexico in the sixteenth and seventeenth centuries, expanded over most of the Gulf Coast, Texas and the border zone westward through California. France, moving down from Canada in the eighteenth century, annexed the Mississippi Valley from the Appalachians to the Rockies. Meanwhile, in the seventeenth century, the English began peopling the Atlantic shore, and finding the Dutch already established in the present New York and the Swedes in Delaware, seized their possessions. The so-called first Americans, the Indians, resisted these encroachments at their peril.

Notwithstanding this varied international background, United States history has been largely the product of influences emanating from the seaboard communities. Unlike the Spanish and French, the English regarded their colonies as genuine extensions of the homeland, and the settlers sowed English customs, institutions and speech so thoroughly that they eventually spread everywhere. True, the transplanted ways underwent modification, but this arose from necessities imposed by a wilderness existence and, as time went on, from a growing sense of self-sufficiency.

Organized settlement began in 1607 at Jamestown, where the first representative assembly was set up in 1619. The Pilgrims followed at Plymouth in 1620, spearheading a much larger migration of Puritans into New England. Later in the century the Quakers occupied a midway region owned by William Penn, making Philadelphia their headquarters and fanning out in every direction. By 1700 all the thirteen colonies existed but the southernmost, Georgia, which came into being in 1733. The settlers crossed the ocean to escape economic, religious and political oppression and to start anew in a land of greater opportunity.

In time, other strains reinforced the original English population: French Huguenots, Scotch Irish, Germans and minor groups, including the Dutch and Swedes already on hand. African slaves, first introduced at Jamestown in 1619, were welcomed in all the colonies, though the economic need for them was greater in the South, and the system took deeper root there than elsewhere. The people in the North engaged mainly in small farming, fishing and commerce, the Southerners largely in plantation production. Everywhere the colonists practiced self-government. When they clashed with the English-

appointed governors, they usually won out by withholding appropriations.

As the population penetrated farther inland, the settlers encountered the French guarding Canada and the eastern fringes of the Mississippi Valley. In a succession of wars (1689-1763), paralleling great struggles between the parent nations abroad, France was finally ejected from North America and Britain's dominion extended to the Mississippi. Spain felt heir to the country west of the river though some years later Napoleon was temporarily to reclaim it for France.

2. Birth of the Nation

With the removal of the Gallic menace the colonists felt less dependent upon the mother country militarily, and England's change from her former policy of "salutary neglect" aroused active resentment. A series of revenue measures, starting with the Sugar Act of 1764, provoked meetings of protest, nonimportation pacts and mob demonstrations in America. Colonial home rule was at stake, also freedom of trade and the provincials appealed to the principle: "No taxation without representation." Parliament's action in 1774 penalizing all Massachusetts for the deed of a few in dumping dutied tea into Boston Harbor led to the first armed clash at Concord and Lexington on April 19, 1775; but a year and more passed before the patriots resolved upon the hazardous step of independence. The famous Declaration of July 4, 1776, penned by Thomas Jefferson for the Second Continental Congress, justified revolution as the only means to guarantee the "unalienable Rights" of "Life, Liberty and the pursuit of Happiness." Under George Washington as commander in chief the fighting shifted from New England into the middle states and then into the south. General Gates's victory at Saratoga on October 17, 1777, brought England's ancient enemy, France, into the war; just four years later the British yielded to the Allies at Yorktown. The Peace Treaty in 1783 recognized the United States as stretching to the Mississippi.

The infant, though born and baptized, had yet to be weaned. The league of states formed under the Articles of Confederation in 1781, proved too weak either to deal effectively with foreign countries, or to raise necessary funds, or to ensure unrestricted domestic trade. Within the state, however, Revolutionary idealism prompted action to forbid primogeniture and tax supported religions, and the Northern commonwealths abolished slavery, a prohibition which Congress's Ordinance of 1787 extended to the territory north of the Ohio. Feebleness of government, combine

with social disturbances culminating in Shays's Rebellion in Massachusetts, made sober men tremble for the sanctity of property rights and seemed to cloud the nation's future. The Federal Convention, summoned in 1787, designed a new framework after much wrangling between rival interests and sections.

The Constitution established a government of three separate and coordinate departments—legislative, executive and judicial—each endowed with adequate power, and each to serve as a check and balance on the others. Within its own sphere the general government was supreme, and it exerted its will not through state officials, as under the Articles of Confederation, but immediately upon individuals. Direct popular representation was limited to the House of Representatives, the Senate being chosen by the legislatures (a system which lasted till 1913), the President designated by Electors (who in practice, however, quickly lost their deliberative function), and the Supreme Court appointed by the President and Senate for life. Opposed in many states because of its centralizing and undemocratic features, the Constitution eventually won adoption on the assurance that a bill of rights would be added to preclude federal interference with civil liberties such as freedom of speech, the press and religion. The first ten amendments, in 1792, fulfilled the promise.

Perhaps no convention would have ratified the Constitution if it had been realized that an indivisible Union would ensue. The framers, engaged in the practical task of curing the defects of the Confederation government, strewed phrases through the document that had contradictory implications. On the basis of the text it was possible for equally honest men to maintain that the states were more powerful than the nation, or that the nation overtopped the states. At one time or other nearly every legislature, given what it considered sufficient provocation, asserted the right of nullification or secession. Short of such extreme doctrines, controversy began almost immediately over the question of whether the Constitution should be construed broadly to enhance the national authority or narrowly to lessen it.

Under George Washington, President from 1789 to 1797, the new government became a going concern. Congress, guided by Secretary of the Treasury Alexander Hamilton, buttressed the public credit by arranging to pay at par the national debt and the war-incurred state debts and by creating a United States Bank modeled upon the Bank of England. These measures, especially the last, alarmed Jefferson, veteran liberal and Washington's Secretary of State. Fearing that the legislation would build up a dangerous moneyed class, he urged a strict interpretation of the Con-

stitution in opposition to Hamilton's loose-construction views. The French Revolution widened the breach, for the Jeffersonian Democrats applauded as an upsurge of liberty what the Federalists dreaded as an irruption of chaos. But both men, knowing America's defenseless state, backed Washington's decision to maintain neutrality in France's war with England. Returned to power under John Adams, the Federalists in 1798, however, declared naval hostilities against France and passed the Alien and Sedition Acts to muzzle opposition criticism. Though Adams, defying his party, prevented a full-scale war, he lost the election of 1800 to Jefferson. The Federalists never saw office again.

3. Democracy and Nationalism

The farming interest, which Jefferson deemed the bulwark of free government, had steadily increased since the Revolution. As settlers trekked inland, new states joined the original thirteen: Vermont, Kentucky and Tennessee in the 1790's, with Ohio and others shortly to follow. Western pioneer life begot an intense individualism, fostered political and economic democracy, stimulated nationalism. In the South, by contrast, Eli Whitney's invention of the cotton gin in 1793 opened the way for plantation agriculture and Negro slavery to expand westward beyond the Mississippi. The growth of manufacturing in the Northeast introduced a third element into the scene. The rivalries of these sectional forces wove the principal strands of American history until the Civil War. Toward the mid-century the situation was further confused by the spread of manhood suffrage and a sudden mass immigration from Ireland and Germany.

Jefferson inaugurated the "Virginia Dynasty," his eight years giving way to two terms each of James Madison and James Monroe. He performed his greatest service by purchasing Louisiana from Napoleon in 1803, an act which, though violating his constitutional scruples, carried the flag to the Rockies and vastly enlarged the agricultural domain. With France and England again locked in conflict, depredations on American commerce gave constant provocation to war, but the peace-loving Jefferson applied economic sanctions in the form of an embargo keeping merchantmen at home. Such measures failed, however, and under Madison in 1812 Congress, goaded by the Warhawks, mostly Westerners, declared war on England. Unlike France, she had compounded her offenses by impressing American sailors and, moreover, lay exposed to land attack in Canada. But the assaults on Canada miscarried, and Britain's attempts at counter-invasion with veterans freed by Napoleon's defeat in 1814 fared little better.

Unhappily, Andrew Jackson's victory at New Orleans on January 8, 1815, occurred two weeks too late to affect the Peace Treaty of Ghent, which settled none of the prewar disputes.

Nevertheless the war experience greatly accelerated American nationalism. In 1816 Congress enacted the first protective tariff and chartered a new United States Bank on the model of Hamilton's. In 1819 the country acquired the Gulf region from Spain, who chose to sell rather than have it seized. In 1823 the President, prompted by successful revolutions in Latin America, proclaimed the Monroe Doctrine, warning Europe to keep hands off this new area of freedom.

Other events, however, prefigured growing sectional discord. Opposition to admitting Missouri as a slave state was ended in 1820 only by Congress's agreeing that the rest of the Louisiana Purchase north of the parallel marking her southern boundary should be free soil. Successive tariffs alienated Southerners as class legislation discriminating against their welfare. Touted by the astute South Carolinian, John C. Calhoun, they refurbished the doctrine of state rights as defensive armor. John Quincy Adams's administration (1825-1829) did nothing to improve conditions, and the advent of his successor, Jackson, precipitated a crisis.

Old Hickory, as indomitable in peace as in war, acted boldly against divisive tendencies, whether from the slavocracy or the money power. When South Carolina nullified the Tariff of 1832, he prepared for military action, whereupon the state accepted Congress's olive branch of a lower scale of duties. He smote financial privilege by destroying the Second United States Bank, which wielded monopolistic control over the nation's credit facilities. After eight years Jackson's lieutenant, Martin Van Buren, took over, but a business depression following the Panic of 1837 so discredited his administration that in 1840 the Whigs uproariously elected William Henry Harrison in the famous log-cabin campaign. He died after a month in office, however, and the Whigs fared hardly better with his unintended successor, John Tyler, whose strict-constructionist predilections foiled their plan to establish a third national bank.

Within the free states these years witnessed a ceaseless ferment of humanitarian agitation: crusades for public education, temperance, prison reform, labor's rights, women's rights. Humane people, viewing slavery as an anachronism and a sin, formed organizations to urge its abolition. The moderate-minded, content with demanding its exclusion from the territories, founded a series of unsuccessful parties, beginning with the election of 1840. The

South, frightened by these threats to its cherished institution, found little good in any of the movements and regarded the restless North with mounting apprehension.

4. Sectional Conflict

Western expansionist zeal plus the Southern desire for more slave territory elected James K. Polk over his Whig rival, Henry Clay, in 1844. When the outgoing Congress executed the Democratic pledge to annex Texas, Polk proceeded to high-pressure England into partitioning the jointly held Oregon country at the forty-ninth parallel, and in 1846, while that was still under way, contrived a war with Mexico to acquire California and the territory eastward to Texas. American forces quickly overran northern Mexico and California, but a fiercely contested march from Veracruz through the mountains to Mexico City proved necessary before Polk achieved his goal in the Treaty of Guadalupe Hidalgo early in 1848.

The conquests approximately completed the present continental boundaries. The immediate effect, however, was to arouse sectional dissension over the question of slavery in the new Southwest. Zachary Taylor, elected by the Whigs in 1848, died in office after sixteen months, leaving the crisis in the lap of Millard Fillmore. The Compromise of 1850, piloted through Congress by Henry Clay, admitted California as a free state, left slavery in Utah and New Mexico territories to future judicial determination, and disposed of other disputes. But the settlement soon turned into unsettlement, for Fillmore's Democratic successors, Franklin Pierce and James Buchanan, supported pro-Southern policies.

The Kansas-Nebraska Act of 1854, authorizing slavery by "popular sovereignty" in the country just west of Missouri and Iowa, outraged Northerners as a base repudiation of the historic Missouri Compromise. Guerrilla warfare followed in Kansas, while in the free states the old-time antislavery elements joined with dissident Whigs and Democrats to organize the Republican party. The Republicans insisted that slavery be kept out of all federal territories. Angry contests on the floors of Congress operated like a war of nerves convincing each side that the other was plotting its ruin. John Brown's insane attempt in 1859 to incite a servile insurrection merely poured oil on the flames. When the Republicans in 1860 elected Abraham Lincoln over a divided Democratic opposition, eleven slave states, appealing to state-rights principles, seceded and established the Confederate States of America.

For the hostilities that ensued, the North possessed the long-run advantage.

of superior economic resources and man power, but before these could come into play, the South hoped to win by military prowess and perhaps by the intervention of England, which needed Southern cotton. England, however, never went quite so far, and the Southern authorities failed also to reckon with the inspired leadership of President Lincoln, who taught his people that the preservation of the Union involved not only their country's future but the democratic hope everywhere. While the North went about establishing a blockade by sea, the Confederates under Robert E. Lee brilliantly repulsed repeated land attacks on their capital, Richmond, and countered with battles on Northern soil at Antietam in 1862 and Gettysburg in 1863. But in the west they steadily lost ground until the Union forces late in 1864 swept around the southern tip of the mountains into Lee's rear and, by a pincers movement with Ulysses S. Grant before Richmond, brought final defeat the following April. As soon as military fortunes favored, Lincoln under his war powers proclaimed the emancipation of slaves in all unconquered states and districts, and the Thirteenth Amendment in 1865 universalized the decree. America at long last had caught up with the preamble of the Declaration of Independence.

Even prior to his re-election in 1864, Lincoln "with malice toward none" announced a plan to ease the return of the Southern states to their former place in the Union; but before much could be accomplished, his assassination on April 14, 1865, brought into office Andrew Johnson, who shared his views of reconstruction without his gifts of persuasion. Over Johnson's vetoes the radical Republicans adopted a punitive program. They imposed military rule upon the South, impeached and almost ousted the President, and exacted ratification of the Fourteenth and Fifteenth Amendments before readmitting the last states in 1870. These amendments were designed to make the freedman a full-fledged citizen and voter. Even so, federal bayonets kept Northern-controlled carpet-bag governments in power for several years more.

5. Business and Government

Already the Republicans were changing from a humanitarian party to one of conservative business. The war gave an immense stimulus to economic life, speeding the construction of railways, the exploitation of minerals and other resources, the development of large-scale manufacturing, the accumulation of wealth, and bringing to the fore great captains of industry and finance, who naturally turned for favors to the dominant party. Despite economic depressions after the Panics of 1873 and 1893, this alliance of business and politics

governed the country almost uninterrupted for the rest of the century, putting successively into office Grant (for eight years), Rutherford B. Hayes, James A. Garfield, Chester A. Arthur (for Garfield's unexpired term), Benjamin Harrison and William McKinley (for two terms).

In the Hayes-Tilden election of 1876, however, the Republicans nearly came to grief, partly because of revelations of widespread graft in Grant's second administration, and partly because of disputed electoral returns from the surviving carpetbag states. A special commission, created by Congress, decided for Hayes by a strictly partisan vote. The Democrats actually won eight years later, the voters preferring Grover Cleveland to James G. Blaine, whom they suspected of political corruption. Cleveland, though defeated in 1888, triumphed again in 1892 largely because the Republicans had claimed too much for the beneficence of tariff protection. The Republicans avoided other disasters by harping upon Democratic disloyalty during the Civil War ("waving the bloody shirt") and by catering to the Northern veterans' vote with generous pensions.

Conservative Republicanism met its principal difficulties in Congress, where the Western members, supported usually by Southern Democrats, uneasily resisted capitalistic domination. The Farther West, peopling rapidly after the war, gave a fresh dimension to the nation. Thanks to the attractions of precious minerals, cattle raising and free homesteads, this last frontier yielded steadily to settled communities, and between 1876 and 1896 eight additional states entered the Union. A new sectionalism emerged in politics, for Western needs and aspirations differed at many points from those of the East. The wage earners, too, feared the growing power of Big Business, but despite mounting numbers they lacked political representation and hence concentrated on trade-union methods, forming the American Federation of Labor in 1881. The two depression periods produced violent strikes and upheavals. Labor, however, prevailed upon Congress to place restraints on immigration in order to discourage competition by underpaid workers, especially from Southern and Eastern Europe.

Legislative struggles nearly always pivoted on issues affecting the new industrial order. The problem of greenback inflation, arising from the war, was finally settled to Eastern satisfaction by the Resumption Act of 1875. The drive for higher and yet higher protection succeeded with occasional reverses until the Dingley Tariff in 1897 set a record. Congress under Western pressure took ineffective steps in 1887 and 1890 to regulate railways and business combinations, and it made some early concessions also to the Western de-

mand for free silver. During the Panic of 1893, however, Cleveland induced Congress to stop the inflation; and after the silverites, capturing the Democratic convention in 1896, failed to elect their nominee, William Jennings Bryan, the Republicans reduced silver to a minor coin and committed the country to the gold standard.

Foreign relations reflected similar tendencies, for the expanding industrial system demanded new markets, openings for investment and sources of raw materials. Cleveland withstood imperialistic sentiment, and in 1898 the McKinley administration intervened in the Cuban insurrection under the whip of popular anger at Spanish methods of repression and the explosion of the battleship *Maine* in Havana Harbor. Spain was quickly routed not only in the West Indies but also in her possessions off Asia. Though the "splendid little war" was prompted less by Wall Street than by a superheated sensational press, it bore fruit in the annexation of Puerto Rico, the Philippines and Guam, and brought businessmen further advantages through the quasi protectorate imposed on Cuba (later extended to other Caribbean countries). About the same time Hawaii and American Samoa were acquired, and Secretary of State John Hay's "open door" policy promised a growing trade with China. Theodore Roosevelt, raised to the presidency by McKinley's assassination in September, 1901, further advanced the cause by abetting a revolution against Colombia, thereby assuring the construction of the Panama Canal and much shorter distances within the colonial empire.

In domestic politics, however, Roosevelt aligned himself with the rising sentiment against business-dominated government, preaching with gusto the doctrine of the "square deal," and in his seven years breaking ground for later and more substantial advances. Despite party reactionaries he put teeth into the enforcement of the Antitrust Act of 1890, bullied Congress into tightening control over railroads and industrial monopolies, and initiated measures for conserving the nation's natural resources. William Howard Taft, his choice as successor, quietly pursued similar policies; but Taft's endorsement of the steep Payne-Aldrich Tariff together with other missteps so embittered the reformers that, failing to prevent his renomination in 1912, they organized the Progressive party to run their idol "Teddy" again. The Democrats, facing a divided opposition, elected their candidate, Woodrow Wilson.

Superbly endowed intellectually, and gifted with Jefferson's power to express democratic aspirations, Wilson proceeded with magisterial authority to climax the earlier efforts at reform. The Underwood Tariff enacted the lowest rates since the

Civil War; the Federal Reserve Act superseded an outworn national banking system; and the Clayton Act created the Federal Trade Commission to stop "unfair methods of competition." Two other measures, launched by popular demand during World War I, involved changes in the Constitution. The Eighteenth Amendment in 1920 enacted national prohibition, which ran its stormy course in thirteen years and required the Twenty-first for its undoing. The Nineteenth Amendment (1920) extended to all women the suffrage which in some states they already possessed.

6. World War and After

With America a neutral in 1914 when the European struggle began, the administration's chief energies turned to the protection of maritime rights. Wilson and his countrymen, hating war and traditionally isolationist, only gradually perceived the threat to national security if a militaristic Germany should supplant Britain as mistress of the Atlantic; but Berlin's revival of ruthless submarine operations a few months after Wilson's second election clarified men's minds. Congress, stirred by his appeal that "The world must be made safe for democracy," declared war on April 6, 1917. The government, racing against time, swiftly put the nation on a battle footing, enacting universal conscription, taking over the railways, and regimenting industry, labor and agriculture. It was the country's introduction to total war. In the summer of 1918 Yankee troops under General John J. Pershing helped repulse a great German drive on the Marne and in September shared in the mighty Meuse-Argonne counteroffensive, which ended the struggle on November 11.

At the Paris Peace Conference, Wilson fought stubbornly for the democratic settlement he had earlier outlined under Fourteen Points, but gained principally his proposal of a League of Nations, which he saw as a sort of continuing peace conference. At home the Republican-controlled Senate, whipping up isolationist sentiment, completed his rout, for when Wilson spurned efforts to amend the treaty, that body under the two-thirds requirement rejected it by a minority vote. The tide was turning from wartime idealism to what Warren G. Harding, overwhelmingly elected by the Republicans in 1920, called "normalcy." Disclosures of corruption in high government circles hastened Harding's death, elevating Calvin Coolidge, who renewed his presidency by election a year later and was followed in 1929 by Herbert Hoover. All three, while keeping out of the League, nevertheless cooperated with some of its minor activities and, on their own, concluded a number of collective treaties for temporary naval disarmament and the outlawry of war.

These part-way steps were offset, however, by an upsurge of economic nationalism: a skyward trend of protective duties, a relaxing of controls over giant corporations, and a quota limitation on European immigration "Rugged individualism" produced the dizziest prosperity the country had ever known, only to collapse in 1929 into the worst depression ever known. Hoover, striving vainly to repair the damage, met abject defeat in 1932 at the hands of the socially minded Franklin D. Roosevelt, who pledged a "new deal" by the Democrats. Under Roosevelt's thrilling leadership Congress, casting precedent to the winds, voted billions for relief, "primed the pump" of business and agriculture to hasten recovery, and inaugurated long-range reforms to increase foreign trade through reciprocal tariff reductions, reorganize banking practices, safeguard trade-union activities, guarantee minimum wages, destroy electrical holding companies, and provide for social insurance and a government-planned development of the Tennessee Valley.

7. World War Again

Toward Latin America Franklin Roosevelt adopted the "good neighbor" policy, relinquishing the Caribbean protectorates and transforming the Monroe Doctrine into a mutual nonaggression pact. As further evidence of the retreat from imperialism, Congress made provision for Philippine freedom in 1946. Relations with other parts of the world, however, posed increasing problems. As the Axis dictators and their Oriental partner, Japan, began overrunning weaker peoples, Congress under isolationist influences directed Roosevelt, against his wish, to embargo munition sales to both victim and assailant; but public opinion forced a lifting of the ban after England and France in September, 1939, took up arms against Nazi aggression. Hitler's subjugation of France the following June emboldened Roosevelt to more active steps, for crippled England now alone defended the Atlantic from totalitarian domination. Congress at his behest voted vast sums for rearmament and adopted peacetime conscription, and Roosevelt, without consulting Congress, gave England fifty destroyers in exchange for a string of naval bases off North America.

Isolationists, mostly Republicans, denounced Roosevelt's "warmongering," while he, still clinging to measures "short of war," stressed insistently the gathering dangers to the American way of life—to freedom of speech, freedom of worship, freedom from want and freedom from fear. The people responded by choosing him in 1940 as their first third-term President. In March, 1941, he secured adoption of the lend-lease plan and soon began using the navy to safeguard the supplies en route.

Before matters reached a crisis, the Japanese war lords, irked by America's stiffening attitude toward their own conquests and gambling upon an Axis victory in Europe, treacherously attacked Pearl Harbor on December 7, clearing the way for the seizure of Guam, the Philippines and two of the Aleutians, as well as many Dutch and British holdings. Within four days Germany and Italy declared war against the United States.

America quickly girded herself for the mightiest struggle in history. Enlarging upon Wilson's wartime methods, the government completely reorganized the national economy for an unparalleled output of arms and food. By summer, sea, land and air forces were attacking the enemy all over the globe. In May, 1943, after bitter fighting, Anglo-American armies expelled the Axis from North Africa, then invaded southern Italy and forced the government's submission in September, though the Nazis there kept up the fight. Landing in Normandy in June, 1944, the Allies under Dwight D. Eisenhower's supreme command battered their way through France and across the Rhine, while the Russians pounded the Nazis from the east. On May 8, 1945, Germany unconditionally surrendered. The Pacific war was no less desperately contested; but the Allies, based on Australia, slowly won control of the sea and, pressing onward from island to island, hastened Japan's unconditional surrender on August 14, 1945, by loosing the atomic bomb and by Soviet Russia's last-minute entry into the conflict.

World War II was at an end, but what would be the nature of the peace? The Atlantic Charter, signed in August, 1941, by Roosevelt and Churchill and later agreed to by all the Allies, pledged them against "aggrandizement, territorial or other," but subsequent conferences by the major powers—at Cairo, Teheran, Yalta, Potsdam and elsewhere—foreshadowed a different outcome. Russia in particular demanded substantial territorial advantages. In July, 1946, the Allies gathered at Paris to draw up terms for Italy and the Axis satellites: Rumania, Bulgaria, Hungary and Finland. Germany and Japan, under armed occupation, were reserved for later handling.

Without waiting for final military victory fifty countries, at Roosevelt's urging and with bipartisan support in America, had set up a successor to the League: the peacetime United Nations. Roosevelt, elected a fourth time in 1944, died suddenly on April 12, 1945, several weeks too soon to assist in framing the charter at San Francisco; but his achievements in peace and war had already earned him a niche alongside America's greatest Presidents: Washington, Jefferson, Jackson, Lincoln and Wilson.

The Mayflower Compact

On September 6, 1620, the *Mayflower*, a sailing vessel of about 180 tons, started her memorable voyage from Plymouth, England with 100 or 102* pilgrims aboard, bound for Virginia to establish a private permanent colony in North America. Arriving at Provincetown, Mass., on November 11 (November 21, new style calendar),

forty-one of the passengers signed the famous "Mayflower Compact" as the boat lay at anchor in that Cape Cod harbor. A small detail of the Pilgrims, led by William Bradford, assigned to select a place for permanent settlement landed at what is now Plymouth, Mass., on December 21, N.S.

The text of the compact follows:

IN THE NAME OF GOD, Amen. We, whose names are underwritten, the Loyal Subjects of our dread Sovereign Lord, King *James*, by the Grace of God, of *Great Britain, France and Ireland*, King, *Defender of the Faith*, &

Having undertaken for the Glory of God, and Advancement of the Christian Faith, and the Honour of our King and Country, a voyage to plant the first colony in the northern Parts of Virginia; do by these Presents, solemnly and mutually in the Presence of God and one of another, covenant and combine ourselves together into a civil Body Politick, for our better Ordering and Preservation, and Furtherance of the Ends aforesaid; And by Virtue hereof to enact, constitute, and frame, such just and equal Laws, Ordinances, Acts, Constitutions and Offices, from time to time, as shall be thought most meet and convenient for the General good of the Colony; unto which we promise all due Submission and Obedience.

In WITNESS whereof we have hereunto subscribed our names at *Cape Cod* the eleventh of *November*, in the Reign of our Sovereign Lord, King *James of England, France and Ireland*, the eighteenth, and of *Scotland* the fifty-fourth. *Anno Domini*, 1620

The Early Congresses

At the urging of Massachusetts and Virginia, the First Continental Congress met in Philadelphia on September 5, 1774, and was attended by representatives of all the colonies except Georgia. Patrick Henry of Virginia declared: "The distinctions between Pennsylvanians, New Yorkers and New Englanders are no more. I am not a Virginian but an American." This Congress, which adjourned October 26, 1774, passed intercolonial resolutions calling for extensive boycott by the colonies against British trade.

The following year, most of the delegates from the colonies were chosen by popular election to attend the Second Continental Congress, which assembled in Philadelphia on May 10. As war had already begun between the colonies and England, the chief problems before the Congress were the procuring of military supplies, the establishment of an army and proper defenses, the issuing of continental bills of credit, etc. On June 15, 1775, George Washington

was elected to command the Continental army. Congress adjourned Dec. 12, 1776.

Other Continental Congresses were held in Baltimore (1776-77), Philadelphia (1777), Lancaster, Pa. (1777), York, Pa. (1777-78) and Philadelphia (1778-81).

In 1781, the Articles of Confederation, although establishing a league of the thirteen states rather than a strong central government, provided for the continuance of Congress. Known thereafter as the Congress of the Confederation, it held sessions in Philadelphia (1781-83), Princeton, N. J. (1783), Annapolis, Md. (1783-84) and Trenton, N. J. (1784). Five sessions were held in New York City between the years 1785 and 1789.

The Congress of the United States, established by the ratification of the Constitution, held its first meeting on Mar. 4, 1789 in N. Y. C. Several sessions of Congress were held in Philadelphia, and the first meeting in Washington, D. C., was on Nov. 17, 1800.

Presidents of the Continental Congresses

Name	Elected	Born	Died
Peyton Randolph, Va.	Sept. 5, 1774	1723	1775
Henry Middleton, S. C.	Oct. 22, 1774
Peyton Randolph, Va.	May. 10, 1775	1723	1775
John Hancock, Mass.	May 24, 1775	1737	1793
Henry Laurens, S. C.	Nov. 1, 1777	1724	1792

The Star-Spangled Banner

Francis Scott Key, 1814

O say, can you see, by the dawn's early light,
What so proudly we hail'd at the twilight's last gleaming?
Whose broad stripes and bright stars, thro' the perilous fight,
O'er the ramparts we watch'd, were so gallantly streaming?
And the rockets' red glare, bombs bursting in air,
Gave proof thro' the night that our flag was still there.
O say, does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?

On the shore dimly seen thro' the mists of the deep,
Where the foe's haughty host in dread silence reposes,
What is that which the breeze, o'er the towering steep,
As it fitfully blows, half conceals, half discloses?
Now it catches the gleam of the morning's first beam,
In full glory reflected, now shines on the stream:
'T is the star-spangled banner: O, long may it wave
O'er the land of the free and the home of the brave!

And where is that band who so vauntingly swore
That the havoc of war and the battle's confusion,
A home and a country should leave us no more?
Their blood has wash'd out their foul footsteps' pollution.
No refuge could save the hireling and slave
From the terror of flight or the gloom of the grave:
And the star-spangled banner in triumph doth wave
O'er the land of the free and the home of the brave.

O thus be it ever when free-men shall stand
Between their lov'd home and wild war's desolation;
Blest with vict'ry and peace, may the heav'n-rescued land
Praise the pow'r that hath made and preserv'd us a nation!
Then conquer we must, when our cause it is just,
And this be our motto: "In God is our trust!"
And the star-spangled banner in triumph shall wave
O'er the land of the free and the home of the brave!

ON SEPTEMBER 13, 1814, Francis Scott Key visited the British fleet in Chesapeake Bay to secure the release of Dr. William Beanes, who had been captured after the burning of Washington, D. C. The release was secured, but Key was detained on ship overnight during the shelling of Fort McHenry, one of the forts defending Baltimore. In the morning, he was so delighted to see the American flag still flying over the fort that he began a poem to commemorate the occasion. Entitled "The Star-Spangled Banner," the poem soon attained wide popularity as sung to the tune "Anacreon in Heaven." The origin of this tune is obscure, but it may have been written by John Stafford Smith, a British composer born in 1750. "The Star-Spangled Banner" was officially made the National Anthem by Congress in 1931, although already adopted as such by the Army and Navy.

History of the Flag

Source: Encyclopaedia Britannica.

THE FIRST OFFICIAL AMERICAN flag, the Continental or Grand Union flag, was displayed on Prospect Hill, Jan. 1, 1776, in the American lines besieging Boston. It had thirteen alternate red and white stripes, with the British Union Jack in the upper left corner.

On June 14, 1777, the Continental Congress adopted the design for a new flag, which actually was the Continental flag with the red cross of St. George and the white cross of St. Andrew replaced on the blue field by thirteen stars, one for each state. No rule was made as to the arrangement of the stars, and while they were usually shown in a circle, there were various other designs. It is uncertain when the new flag was first flown, but its first official announcement is believed to have been on Sept. 3, 1777.

The first public assertion that Betsy Ross made the first Stars and Stripes appeared in a paper read before the Historical Society of Pennsylvania on March 14, 1870, by William J. Canby, a grandson. However, Mr. Canby on later investigation found no official documents of any action by Congress on the flag before June 14, 1777. Betsy Ross' own story, according to her daughter, was that Washington, Robert Morris and George Ross, as representatives of Congress, visited her in Philadelphia in June, 1776, showing her a rough draft of the flag and asking her if she could make one. However, the only actual record of the manufacture of flags by Betsy Ross is a voucher in Harrisburg, Pa., for 14 pounds

and some shillings for flags for the Pennsylvania navy.

On Jan. 13, 1794, Congress voted to add two stars and two stripes to the flag in recognition of the admission of Vermont and Kentucky to the Union. By 1818, there were twenty states in the Union, and as it was obvious that the flag would soon become unwieldy, Congress voted April 18 to return to the original thirteen stripes and to indicate the admission of a new state simply by the addition of a star the following July 4. The last two stars were added July 4, 1912, for New Mexico and Arizona.

The first Confederate flag, adopted in 1861 by the Confederate convention in Montgomery, Ala., was called the Stars and Bars; but because of its similarity in colors to the American flag, there was much confusion in the Battle of Bull Run. To remedy this situation, Gen. G. T. Beauregard suggested a battle flag, which was used by the Southern armies throughout the war. The flag consisted of a red field on which was placed a blue cross of St. Andrew separated from the field by a white fillet and adorned with eleven white stars for the Confederate states. In May, 1863, at Richmond, an official flag was adopted by the Confederate Congress. This flag was white and twice as long as wide; the union, two-thirds the width of the flag, contained the battle flag designed for Gen. Beauregard. A broad transverse stripe of red was added Feb. 4, 1865, so that the flag might not be mistaken for a signal of truce.

Flag Etiquette

(Public Law 829—77th Congress)

(Chapter 806—2d Session)

(H. J. Res. 359)

JOINT RESOLUTION

To amend Public Law Numbered 623, approved June 22, 1942, entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America."

Resolved by the Senate and House of Representatives of the United States of America in Congress Assembled, That Public Law Numbered 623, approved June 22, 1942, entitled "Joint resolution to codify and emphasize existing rules and customs pertaining to the display and use of the flag of the United States of America," be, and the same is hereby amended to read as follows:

That the following codification of existing rules and customs pertaining to the display and use of the flag of the United States of America be, and it is hereby, established for the use of such civilians or

civilian groups or organizations as may not be required to conform with regulations promulgated by one or more executive departments of the Government of the United States.

Sec. 2. (a) It is the universal custom to display the flag only from sunrise to sunset on buildings and on stationary flag-staffs in the open. However, the flag may be displayed at night upon special occasions when it is desired to produce a patriotic effect.

(b) The flag should be hoisted briskly and lowered ceremoniously.

(c) The flag should not be displayed on days when the weather is inclement.

(d) The flag should be displayed on all days when the weather permits, especially on New Year's Day, January 1; Inauguration Day, January 20; Lincoln's Birthday, February 12; Washington's Birthday, Feb.

uary 22; Army Day, April 6; Easter Sunday (variable); Mother's Day, second Sunday in May; Memorial Day (half-staff until noon), May 30; Flag Day, June 14; Independence Day, July 4; Labor Day, first Monday in September; Constitution Day, September 17; Columbus Day, October 12; Navy Day, October 27; Armistice Day, November 11; Thanksgiving Day, fourth Thursday in November; Christmas Day, December 25; such other days as may be proclaimed by the President of the United States; the birthdays of States (dates of admission); and on State holidays.

(e) The flag should be displayed daily, weather permitting, on or near the main administration building of every public institution.

(f) The flag should be displayed in or near every polling place on election days.

(g) The flag should be displayed during school days in or near every schoolhouse.

Sec. 3. That the flag, when carried in a procession with another flag or flags, should be either on the marching right; that is, the flag's own right, or, if there is a line of other flags, in front of the center of that line.

(a) The flag should not be displayed on a float in a parade except from a staff, or as provided in subsection (i).

(b) The flag should not be draped over the hood, top, sides, or back of a vehicle or of a railroad train or a boat. When the flag is displayed on a motorcar, the staff shall be fixed firmly to the chassis or clamped to the radiator cap.

(c) No other flag or pennant should be placed above or, if on the same level, to the right of the flag of the United States of America, except during church services conducted by naval chaplains at sea, when the church pennant may be flown above the flag during church services for the personnel of the Navy.

(d) The flag of the United States of America, when it is displayed with another flag against a wall from crossed staffs, should be on the right, the flag's own right, and its staff should be in front of the staff of the other flag.

(e) The flag of the United States of America should be at the center and at the highest point of the group when a number of flags of States or localities or pennants of societies are grouped and displayed from staffs.

(f) When flags of States, cities, or localities, or pennants of societies are flown on the same halyard with the flag of the United States, the latter should always be at the peak. When the flags are flown from adjacent staffs, the flag of the United States should be hoisted first and lowered last. No such flag or pennant may be placed above the flag of the United States or to the right of the flag of the United States.

(g) When flags of two or more nations

are displayed, they are to be flown from separate staffs of the same height. The flags should be of approximately equal size. International usage forbids the display of the flag of one nation above that of another nation in time of peace.

(h) When the flag of the United States is displayed from a staff projecting horizontally or at an angle from the window sill, balcony, or front of a building, the union of the flag should be placed at the peak of the staff unless the flag is at half-staff. When the flag is suspended over a sidewalk from a rope extending from a house to a pole at the edge of the sidewalk, the flag should be hoisted out, union first, from the building.

(i) When the flag is displayed otherwise than by being flown from a staff, it should be displayed flat, whether indoors or out, or so suspended that its folds fall as free as though the flag were staffed.

(j) When the flag is displayed over the middle of the street, it should be suspended vertically with the union to the north in an east and west street or to the east in a north and south street.

(k) When used on a speaker's platform, the flag, if displayed flat, should be displayed above and behind the speaker. When displayed from a staff in a church or public auditorium, if it is displayed in the chancel of a church, or on the speaker's platform in a public auditorium, the flag should occupy the position of honor and be placed at the clergyman's or speaker's right as he faces the congregation or audience. Any other flag so displayed in the chancel or on the platform should be placed at the clergyman's or speaker's left as he faces the congregation or audience. But when the flag is displayed from a staff in a church or public auditorium elsewhere than in the chancel or on the platform it shall be placed in the position of honor at the right of the congregation or audience as they face the chancel or platform. Any other flag so displayed should be placed on the left of the congregation or audience as they face the chancel or platform.

(l) The flag should form a distinctive feature of the ceremony of unveiling a statue or monument, but it should never be used as the covering for the statue or monument.

(m) The flag, when flown at half-staff, should be first hoisted to the peak for an instant and then lowered to the half-staff position. The flag should be again raised to the peak before it is lowered for the day. By "half-staff" is meant lowering the flag to one-half the distance between the top and bottom of the staff. Crepe streamers may be affixed to spearheads or flag-staffs in a parade only by order of the President of the United States.

(n) When the flag is used to cover a casket, it should be so placed that the union is at the head and over the left

shoulder. The flag should not be lowered into the grave or allowed to touch the ground.

SEC. 4. That no disrespect should be shown to the flag of the United States of America, the flag should not be dipped to any person or thing. Regimental colors, State flags, and organization or institutional flags are to be dipped as a mark of honor.

(a) The flag should never be displayed with the union down save as a signal of dire distress.

(b) The flag should never touch anything beneath it, such as the ground, the floor, water, or merchandise.

(c) The flag should never be carried flat or horizontally, but always aloft and free.

(d) The flag should never be used as drapery of any sort whatsoever, never festooned, drawn back, nor up, in folds, but always allowed to fall free. Bunting of blue, white, and red, always arranged with the blue above, the white in the middle, and the red below, should be used for covering a speaker's desk, draping the front of a platform, and for decoration in general.

(e) The flag should never be fastened, displayed, used, or stored in such a manner as will permit it to be easily torn, soiled, or damaged in any way.

(f) The flag should never be used as a covering for a ceiling.

(g) The flag should never have placed upon it, nor on any part of it, nor attached to it any mark, insignia, letter, word, figure, design, picture, or drawing of any nature.

(h) The flag should never be used as a receptacle for receiving, holding, carrying, or delivering anything.

(i) The flag should never be used for advertising purposes in any manner whatsoever. It should not be embroidered on such articles as cushions or handkerchiefs and the like, printed or otherwise impressed on paper napkins or boxes or anything that is designed for temporary use and discard; or used as any portion of a costume or athletic uniform. Advertising signs should not be fastened to a staff or halyard from which the flag is flown.

(j) The flag, when it is in such condition that it is no longer a fitting emblem for display, should be destroyed in a dignified way, preferably by burning.

SEC. 5. That during the ceremony of hoisting or lowering the flag or when the flag is passing in a parade or in a review, all persons present should face the flag, stand at attention, and salute. Those present in uniform should render the military salute. When not in uniform, men should remove the headdress with the right hand

holding it at the left shoulder, the hand being over the heart. Men without hats should salute in the same manner. Aliens should stand at attention. Women should salute by placing the right hand over the heart. The salute to the flag in the moving column should be rendered at the moment the flag passes.

SEC. 6. That when the national anthem is played and the flag is not displayed, all present should stand and face toward the music. Those in uniform should salute at the first note of the anthem, retaining this position until the last note. All others should stand at attention, men removing the headdress. When the flag is displayed, all present should face the flag and salute.

SEC. 7. That the pledge of allegiance to the flag, "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation indivisible, with liberty and justice for all," be rendered by standing with the right hand over the heart. However, civilians will always show full respect to the flag when the pledge is given by merely standing at attention, men removing the headdress. Persons in uniform shall render the military salute.

SEC. 8. Any rule or custom pertaining to the display of the flag of the United States of America, set forth herein, may be altered, modified, or repealed, or additional rules with respect thereto may be prescribed, by the Commander-in-Chief of the Army and Navy of the United States, whenever he deems it to be appropriate or desirable; and any such alteration or additional rule shall be set forth in a proclamation.

Approved, December 22, 1942.

The American's Creed*

"I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign Nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it; to support its Constitution; to obey its laws; to respect its flag, and to defend it against all enemies."

The Pledge to the Flag†

"I pledge allegiance to the flag of the United States of America, and to the Republic for which it stands, one Nation, indivisible, with liberty and justice for all."

*William Tyler Page, Clerk of the United States House of Representatives, wrote "The American's Creed" in 1917. It was accepted by the House of Representatives on behalf of the American people on April 3, 1918.

†Written by Francis Belamy in August, 1892, of the staff of *The Youth's Companion* in Boston, at the suggestion of James B. Upham, one of the editors.

CONSTITUTION

of the

UNITED STATES OF AMERICA

THE oldest federal constitution in existence was framed by a convention of delegates from twelve of the thirteen original states in Philadelphia in May 1787, Rhode Island failing to send a delegate. George Washington presided over the session, which lasted until September 17, 1787. The draft (originally a preamble and seven Articles) was submitted to all thirteen states and was to become effective when ratified by nine states. It went into effect on the first Wednesday in March 1789, having been ratified by New Hampshire, the ninth state to approve, on June 21, 1788. The states ratified the Constitution in the following order:

Delaware	December 7, 1787	South Carolina	May 23, 1788
Pennsylvania	December 12, 1787	New Hampshire	June 21, 1788
New Jersey	December 18, 1787	Virginia	June 25, 1788
Georgia	January 2, 1788	New York	July 26, 1788
Connecticut	January 9, 1788	North Carolina	November 21, 1789
Massachusetts	February 6, 1788	Rhode Island	May 29, 1790
Maryland	April 28, 1788		

Outline of the Constitution

ARTICLE I

SEC. 1. Legislative powers; in whom vested.

SEC. 2. House of Representatives, how and by whom chosen—Qualifications of a Representative—Representatives and direct taxes, how apportioned—Enumeration—Vacancies to be filled—Power of choosing officers, and of impeachment.

SEC. 3. Senators, how and by whom chosen—How classified—State Executive, when to make temporary appointments, in case, etc.—Qualifications of a Senator—President of the Senate, his right to vote—President pro tem., and other officers of the Senate, how chosen—Power to try impeachments—When President is tried, Chief Justice to preside—Sentence.

SEC. 4. Times, etc., of holding elections, how prescribed—At least one Session in each year.

SEC. 5. Membership—Quorum—Adjournments—Rules—Power to punish or expel—Journal—Time of adjournments, how limited, etc.

SEC. 6. Compensation—Privileges—Disqualification in certain cases.

SEC. 7. House to originate all revenue bills—Veto—Bill may be passed by two-thirds of each house, notwithstanding, etc.—Bill, not returned in ten days, to become a law—Provisions as to orders, concurrent resolutions, etc.

SEC. 8. Powers of Congress.

SEC. 9. Provision as to migration or importation of certain persons—Habeas Corpus—Bills of attainder, etc.—Taxes, how apportioned—No export duty—No commercial preference—Money, how drawn from treasury, etc.—No titular nobility—Officers not to receive presents, etc.

SEC. 10. States prohibited from the exercise of certain powers.

ARTICLE II

SEC. 1. President; his term of office—Electors of President; number and how appointed—Electors to vote on same day—Qualification of President—On whom his duties devolve in case of his removal, death, etc.—President's compensation—His oath of office.

SEC. 2. President to be commander in chief—He may require opinions of Cabinet Officers, etc., may pardon—Treaty-making power—Nomination of certain officers—When President may fill vacancies.

SEC. 3. President shall communicate to Congress—He may convene and adjourn Congress, in case of disagreement, etc.—Shall receive ambassadors, execute laws, and commission officers.

SEC. 4. All civil offices forfeited for certain crimes.

ARTICLE III

SEC. 1. Judicial powers—Tenure—Compensation.

SEC. 2. Judicial power; to what cases it extends—Original jurisdiction of Supreme Court—Appellate—Trial by jury, etc.—Trial, where.

SEC. 3. Treason defined—Proof of—Punishment of.

ARTICLE IV

SEC. 1. Each State to give credit to the public acts, etc., of every other State.

SEC. 2. Privileges of citizens of each State—Fugitives from justice to be delivered up—Persons held to service having escaped, to be delivered up.

SEC. 3. Admission of new States—Power of Congress over territory and other property.

SEC. 4. Republican form of government guaranteed—Each State to be protected.

ARTICLE V

Constitution; how amended—Proviso.

ARTICLE VI

Certain debts, etc., declared valid—Supremacy of Constitution, treaties, and laws of the United States—Oath to support Constitution, by whom taken—No religious test.

ARTICLE VII

What ratification shall establish Constitution.

AMENDMENTS

- I. Religious establishment prohibited—Freedom of speech, of the press, and right to petition.
- II. Right to keep and bear arms.
- III. No soldier to be quartered in any house, unless, etc.
- IV. Right of search and seizure regulated.
- V. Provisions concerning prosecution, trial and punishment—Private property not to be taken for public use, without compensation.
- VI. Further provision respecting criminal prosecutions.

VII. Right of trial by jury secured.

VIII. Excessive bail or fines and cruel punishments prohibited.

IX. Rule of construction of Constitution.

X. Same subject; rights of States.

XI. Same subject; judicial powers construed.

XII. Manner of choosing President and Vice President.

XIII. Slavery abolished.

XIV. Citizenship; representation—Public debt.

XV. Right of suffrage—By whom exercised.

XVI. Taxes on incomes.

XVII. Election of senators—Filling of vacancies.

XVIII. Prohibition.

XIX. Suffrage; not to be denied because of sex.

XX. Commencement of terms of President, Vice President and members of Congress; time of assembling of Congress.

XXI. Repeal of Prohibition.

The Constitution of the United States of America

PREAMBLE.—WE THE PEOPLE of the United States, in Order to form a more perfect Union, establish Justice, insure domestic Tranquility, provide for the common defence, promote the general Welfare, and secure the Blessings of Liberty to ourselves and our Posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I

Section 1

Legislative powers vested in Congress.—All legislative Powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

Section 2

Composition of the House of Representatives.—1. The House of Representatives shall be composed of Members chosen every second Year by the People of the several States, and the Electors in each State shall have the Qualifications requisite for Electors of the most numerous Branch of the State Legislature.

Qualifications of Representatives.—2. No Person shall be a Representative who shall not have attained to the Age of twenty-five Years, and been seven Years a Citizen

of the United States, and who shall not, when elected, be an Inhabitant of that State in which he shall be chosen.

Apportionment of Representatives and direct taxes—census.*—3. [Representatives and direct Taxes shall be apportioned among the several States which may be included within this Union, according to their respective Numbers, which shall be determined by adding to the whole Number of free Persons, including those bound to Service for a Term of Years, and excluding Indians not taxed, three fifths of all other persons.] The actual Enumeration shall be made within three Years after the first Meeting of the Congress of the United States, and within every subsequent Term of ten Years, in such Manner as they shall by Law direct. The Number of Representatives shall not exceed one for every thirty Thousand, but each State shall have at Least one Representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to choose three, Massachusetts eight, Rhode-Island and Providence Plantations one, Connecticut five, New York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.

Filling of vacancies in representation.—

4. When vacancies happen in the Representation from any State, the Executive Au

*The clause included in brackets is amended by the fourteenth amendment, second section.

thority thereof shall issue Writs of Election to fill such Vacancies.

Selection of officers; power of impeachment.—5. The House of Representatives shall chuse their Speaker and other Officers; and shall have the sole Power of Impeachment.

Section 3*

The Senate.—[1. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six Years; and each Senator shall have one Vote.]

Classification of Senators; filling of vacancies.—2. Immediately after they shall be assembled in Consequence of the first Election, they shall be divided as equally as may be into three Classes. The Seats of the Senators of the first Class shall be vacated at the expiration of the second Year, of the second Class at the Expiration of the fourth Year, and of the third Class at the Expiration of the sixth Year, so that one-third may be chosen every second Year; and if Vacancies happen by Resignation, or otherwise, during the Recess of the Legislature of any State, the Executive thereof may make temporary Appointments [until the next Meeting of the Legislature, which shall then fill such Vacancies.]

Qualification of Senators.—3. No Person shall be a Senator who shall not have attained to the Age of thirty Years, and been nine Years a Citizen of the United States, and who shall not, when elected, be an Inhabitant of that State for which he shall be chosen.

Vice-President to be President of Senate.—4. The Vice-President of the United States shall be President of the Senate, but shall have no Vote, unless they be equally divided.

Selection of Senate officers; President pro tempore.—5. The Senate shall chuse their other Officers, and also a President pro tempore, in the absence of the Vice-President, or when he shall exercise the Office of President of the United States.

Senate to try impeachments.—6. The Senate shall have the sole Power to try all Impeachments. When sitting for that Purpose, they shall be on Oath or Affirmation. When the President of the United States is tried, the Chief Justice shall preside: And no Person shall be convicted without the Concurrence of two thirds of the Members present.

Judgment in cases of impeachment.—7. Judgment in Cases of Impeachment shall not extend further than to removal from Office, and disqualification to hold and en-

joy any Office of honor, Trust, or Profit under the United States: but the Party convicted shall nevertheless be liable and subject to Indictment, Trial, Judgment and Punishment, according to Law.

Section 4

Control of congressional elections.—1. The Times, Places and Manner of holding Elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by Law make or alter such Regulations, except as to the Places of chusing Senators.

Time for assembling of Congress.†—2. The Congress shall assemble at least once in every Year, and such Meeting shall be on the first Monday in December, unless they shall by Law appoint a different Day.

Section 5

Each house to be the judge of the election and qualifications of its members; regulations as to quorum.—1. Each House shall be the Judge of the Elections, Returns and Qualifications of its own Members, and a Majority of each shall constitute a Quorum to do Business; but a smaller Number may adjourn from day to day, and may be authorized to compel the Attendance of absent Members, in such Manner, and under such Penalties as each House may provide.

Each house to determine its own rules.—2. Each House may determine the Rules of its Proceedings, punish its Members for disorderly Behavior, and, with the Concurrence of two thirds, expel a Member.

Journals and yeas and nays.—3. Each House shall keep a Journal of its Proceedings, and from time to time publish the same, excepting such Parts as may in their Judgment require Secrecy; and the Yeas and Nays of the Members of either House on any question shall, at the Desire of one fifth of those Present, be entered on the Journal.

Adjournment.—4. Neither House, during the Session of Congress shall, without the Consent of the other, adjourn for more than three days, nor to any other Place than that in which the two Houses shall be sitting.

Section 6

Compensation and privileges of Members of Congress.—1. The Senators and Representatives shall receive a Compensation for their Services, to be ascertained by Law, and paid out of the Treasury of the United States. They shall in all Cases, except Treason, Felony and Breach of the

*The first paragraph of section three of article I of the Constitution of the United States, and so much of paragraph two of the same section as relates to filling vacancies, are amended by the seventeenth amendment to the Constitution.

†Amended by article XX, section 2, of the amendments to the Constitution.

Peace, be privileged from Arrest during their Attendance at the Session of their respective Houses, and in going to and returning from the same; and for any Speech or Debate in either House, they shall not be questioned in any other Place.

Incompatible offices; exclusions.—2. No Senator or Representative shall, during the Time for which he was elected, be appointed to any civil Office under the Authority of the United States, which shall have been created, or the Emoluments whereof shall have been increased during such time; and no Person holding any Office under the United States, shall be a Member of either House during his Continuance in Office.

Section 7

Revenue bills to originate in House.—1. All Bills for raising Revenue shall originate in the House of Representatives; but the Senate may propose or concur with Amendments as on other Bills.

Manner of passing bills; veto power of President.—2. Every Bill which shall have passed the House of Representatives and the Senate, shall, before it becomes a Law, be presented to the President of the United States; If he approve he shall sign it, but if not he shall return it, with his Objections to that House in which it shall have originated, who shall enter the Objections at large on their Journal, and proceed to reconsider it. If after such Reconsideration two thirds of that House shall agree to pass the Bill, it shall be sent, together with the Objections, to the other House, by which it shall likewise be reconsidered, and if approved by two thirds of that House, it shall become a Law. But in all such Cases the Votes of both Houses shall be determined by Yeas and Nays, and the Names of the Persons voting for and against the Bill shall be entered on the Journal of each House respectively. If any Bill shall not be returned by the President within ten Days (Sundays excepted) after it shall have been presented to him, the Same shall be a Law, in like Manner as if he had signed it, unless the Congress by their Adjournment prevent its Return, in which Case it shall not be a Law.

Concurrent orders or resolutions, to be passed by President.—3. Every Order, Resolution, or Vote to which the Concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and before the Same shall take Effect, shall be approved by him, or being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the Rules and Limitations prescribed in the Case of a Bill.

Section 8

General powers of Congress.*

The Congress shall have Power.—1. To lay and collect Taxes, Duties, Imposts and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts and Excises shall be uniform throughout the United States.

Borrowing of money.—2. To borrow money on the credit of the United States.

Regulation of commerce.—3. To regulate Commerce with foreign Nations, and among the several States, and with the Indian tribes.

Naturalization and bankruptcy.—4. To establish an uniform Rule of Naturalization, and uniform Laws on the subject of Bankruptcies throughout the United States.

Money, weights and measures.—5. To coin Money, regulate the Value thereof, and of foreign Coin, and fix the Standard of Weights and Measures.

Counterfeiting.—6. To provide for the Punishment of counterfeiting and Securities and current Coin of the United States.

Post offices.—7. To establish Post Offices and post Roads.

Patents and copyrights.—8. To promote the Progress of Science and useful Arts, by securing for limited Times to Authors and Inventors the exclusive Right to their respective Writings and Discoveries.

Inferior courts.—9. To constitute Tribunals inferior to the supreme Court.

Piracies and felonies.—10. To define and punish Piracies and Felonies committed on the high Seas, and Offenses against the Law of Nations.

War; marque and reprisal.—11. To declare War, grant Letters of Marque and Reprisal, and make Rules concerning Captures on Land and Water.

Armies.—12. To raise and support Armies, but no Appropriation of Money to that Use shall be for a longer Term than two Years.

Navy.—13. To provide and maintain Navy.

Land and naval forces.—14. To make Rules for the Government and Regulation of the land and naval Forces.

Calling out militia.—15. To provide for calling forth the Militia to execute the Laws of the Union, suppress Insurrections and repel Invasions.

Organizing, arming and disciplining militia.—16. To provide for organizing, arming, and disciplining the Militia, and for governing such Part of them as may be

*By article XVI of the amendments to the Constitution, Congress is given the power to lay and collect taxes on incomes.

employed in the Service of the United States, reserving to the States, respectively, the Appointment of the Officers, and the Authority of training the Militia according to the discipline prescribed by Congress.

Exclusive legislation over District of Columbia.—17. To exercise exclusive Legislation in all Cases whatsoever, over such District (not exceeding ten Miles square) as may, by Cession of particular States, and the acceptance of Congress, become the Seat of the Government of the United States, and to exercise like Authority over all Places purchased by the Consent of the Legislature of the State in which the Same shall be, for the Erection of Forts, Magazines, Arsenals, dock-Yards, and other needful Buildings;—and

To enact laws necessary to enforce Constitution.—18. To make all Laws which shall be necessary and proper for carrying into Execution the foregoing Powers, and all other Powers vested by this Constitution in the Government of the United States, or in any Department or Officer thereof.

Section 9

Migration or Importation of certain persons not to be prohibited before 1808.—1. The Migration or Importation of such Persons as of the States now existing shall think proper to admit, shall not be prohibited by the Congress prior to the Year one thousand eight hundred and eight, but a tax or duty may be imposed on such Importation, not exceeding ten dollars for each Person.

Writ of habeas corpus not to be suspended; exception.—2. The privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it.

Bills of attainder and ex post facto laws prohibited.—3. No Bill of Attainder or ex post facto Law shall be passed.

Capitation and other direct taxes.—4. No capitation, or other direct, Tax shall be laid, unless in Proportion to the Census or Enumeration herein before directed to be taken.*

Exports not to be taxed.—5. No Tax or Duty shall be laid on Articles exported from any State.

No preference to be given to ports of any State; interstate shipping.—6. No Preference shall be given by any Regulation of Commerce or Revenue to the Ports of one State over those of another: nor shall Vessels bound to, or from, one State, be obliged to enter, clear, or pay Duties in another.

Money, how drawn from treasury; financial statements to be published.—7. No Money shall be drawn from the Treasury, but in Consequence of Appropriations made by Law; and a regular Statement and Account of the Receipts and Expenditures of all public Money shall be published from time to time.

Titles of nobility not to be granted; acceptance by government officers of favors from foreign powers.—8. No Title of Nobility shall be granted by the United States: And no Person holding any Office of Profit or Trust under them, shall, without the Consent of the Congress, accept of any present, Emolument, Office, or Title, of any kind whatever, from any King, Prince, or foreign State.

Section 10

Limitations of the powers of the several States.—1. No State shall enter into any Treaty, Alliance, or Confederation; grant Letters of Marque and Reprisal; coin Money; emit Bills of Credit; make any Thing but gold and silver Coin a Tender in Payment of Debts; pass any Bill of Attainder, ex post facto Law, or Law impairing the Obligation of Contracts or grant any Title of Nobility.

State imposts and duties.—2. No State shall, without the Consent of the Congress, lay any Imposts or Duties on Imports or Exports, except what may be absolutely necessary for executing its inspection Laws: and the net Produce of all Duties and Imposts, laid by any State on Imports or Exports, shall be for the Use of the Treasury of the United States; and all such Laws shall be subject to the Revision and Control of the Congress.

Further restrictions on powers of States.—3. No State shall, without the consent of Congress, lay any duty of Tonnage, keep Troops, or Ships of War in time of Peace, enter into any Agreement or Compact with another State, or with a foreign Power, or engage in War, unless actually invaded, or in such imminent Danger as will not admit of delay.

ARTICLE II

Section 1

The President; the executive power.—1. The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years, and, together with the Vice-President, chosen for the same Term, be elected, as follows:

Appointment and qualifications of presidential electors.—2. Each State shall appoint, in such Manner as the Legislature thereof may direct, a Number of Electors,

*See sixteenth amendment.

equal to the whole Number of Senators and Representatives to which the State may be entitled in the Congress; but no Senator or Representative, or Person holding an Office of Trust or Profit under the United States, shall be appointed an Elector.

Original method of electing the President and Vice-President.*—[The Electors shall meet in their respective States, and vote by Ballot for two persons, of whom one at least shall not be an Inhabitant of the same State with themselves. And they shall make a List of all the Persons voted for, and of the Number of Votes for each; which List they shall sign and certify, and transmit sealed to the Seat of the Government of the United States, directed to the President of the Senate. The President of the Senate shall, in the Presence of the Senate and House of Representatives, open all the Certificates, and the Votes shall then be counted. The Person having the greatest Number of Votes shall be the President, if such Number be a Majority of the whole Number of Electors appointed; and if there be more than one who have such Majority, and have an equal Number of Votes, then the House of Representatives shall immediately chuse by Ballot one of them for President; and if no Person have a Majority, then from the five highest on the list the said House shall in like Manner chuse the President. But in chusing the President, the Votes shall be taken by States, the Representation from each State having one Vote; A quorum for this Purpose shall consist of a Member or Members from two-thirds of the States, and a Majority of all the States shall be necessary to a Choice. In every Case, after the Choice of the President, the Person having the greatest Number of Votes of the Electors shall be the Vice-President. But if there should remain two or more who have equal Votes, the Senate should chuse from them by Ballot the Vice-President.]

Congress may determine time of choosing electors and day for casting their votes.—

3. The Congress may determine the Time of chusing the Electors, and the Day on which they shall give their Votes; which Day shall be the same throughout the United States.

Qualifications for the office of President.†

—4. No person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any Person be eligible to that Office who shall not have attained to the Age of thirty-five Years, and been fourteen Years a Resident within the United States.

Filling vacancy in the office of President.‡—5. In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the same shall devolve on the Vice-President, and the Congress may by Law provide for the Case of Removal, Death, Resignation or Inability, both of the President and Vice-President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.

Compensation of the President.—6. The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be increased nor diminished during the Period for which he shall have been elected, and he shall not receive within that Period any other Emolument from the United States, or any of them.

Oath to be taken by the President.—7. Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation:—"I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States and will to the best of my Ability, preserve protect and defend the Constitution of the United States."

Section 2

The President to be commander-in-chief of army and navy and head of executive departments; may grant reprieves and pardons.—1. The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the Militia of the several States, when called into the actual Service of the United States; he may require the Opinion, in writing, of the principal Officer in each of the executive Departments, upon any subject relating to the Duties of their respective Offices, and he shall have Power to grant Reprieves and Pardons for Offenses against the United States, except in Cases of Impeachment.

President may, with concurrence of Senate, make treaties, appoint ambassadors etc.; appointment of inferior officers, authority of Congress over.—2. He shall have Power, by and with the Advice and Consent of the Senate, to make Treaties, provided two-thirds of the Senators present concur; and he shall nominate, and by and with the Advice and Consent of the Senate shall appoint Ambassadors, other public Ministers and Consuls, Judges of the supreme Court, and all other Officers of the United States, whose Appointments are not herein otherwise provided for, and which shall be established by Law; but the Congress may by Law vest the Appointment

*This clause has been superseded by the twelfth amendment.

†For qualifications of the Vice President, see article XII of the amendments.

‡Amended by article XX, sections 3, and 4, of the amendments to the Constitution.

ment of such inferior Officers, as they think proper, in the President alone, in the Courts of Law, or in the Heads of Departments.

President may fill vacancies in office during recess of Senate.—3. The President shall have Power to fill up all Vacancies that may happen during the Recess of the Senate, by granting Commissions which shall expire at the End of their next Session.

Section 3

President to give advice to Congress; may convene or adjourn it on certain occasions; to receive ambassadors, etc.; have laws executed and commission all officers.—He shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient; he may, on extraordinary Occasions, convene both Houses, or either of them, and in Case of Disagreement between them, with Respect to the Time of Adjournment, he may adjourn them to such Time as he shall think proper; he shall receive Ambassadors and other public Ministers; he shall take Care that the Laws be faithfully executed, and shall Commission all the Officers of the United States.

Section 4

All civil officers removable by impeachment.—1. The President, Vice-President and all civil Officers of the United States, shall be removed from Office on Impeachment for, and Conviction of, Treason, Bribery, or other high Crimes and Misdemeanors.

ARTICLE III

Section 1

Judicial power; how vested; term of office and compensation of judges.—The judicial Power of the United States, shall be vested in one supreme Court, and in such inferior Courts as the Congress may from time to time ordain and establish. The Judges, both of the supreme and inferior Courts, shall hold their Offices during good Behavior, and shall, at stated Times, receive for their Services a Compensation which shall not be diminished during their Continuance in Office.

Section 2

Jurisdiction of Federal courts.*—1. The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made, or which shall be made, under their Authority;—to all Cases affecting Ambassadors, other public Ministers and Consuls;—to all Cases of Admiralty and maritime Jurisdiction;—to Controversies to which the United States shall

be a Party;—to Controversies between two or more States;—between a State and Citizens of another State;—between Citizens of different States;—between Citizens of the same State claiming Lands under Grants of different States, and between a State, or the Citizens thereof, and foreign States, Citizens or Subjects.

Original and appellate jurisdiction of Supreme Court.—2. In all Cases affecting Ambassadors, other public Ministers and Consuls, and those in which a State shall be Party, the supreme Court shall have original Jurisdiction. In all the other Cases before mentioned, the supreme Court shall have appellate Jurisdiction, both as to Law and Fact, with such Exceptions, and under such Regulations as the Congress shall make.

Trial of all crimes, except impeachment, to be by jury.—3. The trial of all Crimes, except in Cases of Impeachment, shall be by Jury; and such Trial shall be held in the State where the said Crimes shall have been committed; but when not committed within any State, the trial shall be at such Place or Places as the Congress may by Law have directed.

Section 3

Treason defined; conviction of.—1. Treason against the United States, shall consist only in levying War against them, or, in adhering to their Enemies, giving them Aid and Comfort. No Person shall be convicted of Treason unless on the Testimony of two Witnesses to the same overt Act, or on Confession in open Court.

Congress to declare punishment for treason; proviso.—2. The Congress shall have power to declare the Punishment of Treason, but no Attainder of Treason shall work Corruption of Blood, or Forfeiture except during the Life of the Person attainted.

ARTICLE IV

Section 1

Each State to give full faith and credit to the public acts and records of other States.—Full Faith and Credit shall be given in each State to the public Acts, Records, and judicial Proceedings of every other State. And the Congress may by general Laws prescribe the Manner in which such Acts, Records and Proceedings shall be proved, and the Effect thereof.

Section 2

Privileges of citizens.—1. The Citizens of each State shall be entitled to all Privileges and Immunities of Citizens in the several States.

Extradition between the several States.—2. A Person charged in any State with Treason, Felony, or other Crime, who shall

*This section is abridged by article XI of the amendments.

flee from Justice, and be found in another State, shall on demand of the executive Authority of the State from which he fled, be delivered up, to be removed to the State having Jurisdiction of the Crime.

Persons held to labor or service in one State, fleeing to another, to be returned.*

—3. No Person held to Service or Labour in one State, under the Laws thereof, escaping into another, shall, in Consequence of any Law or Regulation therein, be discharged from such Service or Labour, but shall be delivered up on Claim of the Party to whom such Service or Labour may be due.

Section 3

New States.—1. New States may be admitted by the Congress into this Union; but no new State shall be formed or erected within the Jurisdiction of any other State; nor any State be formed by the Junction of two or more States, or parts of States, without the Consent of the Legislatures of the States concerned as well as of the Congress.

Regulations concerning territory.—2. The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State.

Section 4

Republican form of government and protection guaranteed the several States.—The United States shall guarantee to every State in this Union a Republican Form of Government, and shall protect each of them against Invasion; and on Application of the Legislature, or of the Executive (when the Legislature cannot be convened) against domestic Violence.

ARTICLE V

Ways in which the Constitution can be amended.—The Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose Amendments to this Constitution, or, on the Application of the Legislatures of two-thirds of the several States, shall call a Convention for proposing Amendments, which, in either Case, shall be valid to all Intents and Purposes, as part of this Constitution, when ratified by the Legislatures of three-fourths of the several States, or by Conventions in three-fourths thereof, as the one or the other Mode of Ratification may be proposed by the Congress; Provided that no Amendment which may be made prior to the Year One thousand eight hundred and eight shall in any Manner affect the first and

fourth Clauses in the Ninth Section of the first Article; and that no State, without its Consent, shall be deprived of its equal Suffrage in the Senate.

ARTICLE VI

Debts contracted under the confederation secured.—1. All Debts contracted and Engagements entered into, before the Adoption of this Constitution, shall be valid against the United States under this Constitution, as under the Confederation.

Constitution, laws and treaties of the United States to be supreme.—2. This Constitution, and the Laws of the United States shall be made in Pursuance thereof, and all Treaties made, or which shall be made, under the Authority of the United States, shall be the supreme Law of the Land; and the Judges in every State shall be bound thereby, any Thing in the Constitution or Laws of any State to the Contrary notwithstanding.

Who shall take constitutional oath; no religious test as to official qualification.—3. The Senators and Representatives before mentioned, and the Members of the several State Legislatures, and all executive and judicial Officers, both of the United States and of the several States shall be bound by Oath or Affirmation, to support this Constitution; but no religious Test shall ever be required as a Qualification to any Office or public Trust under the United States.

ARTICLE VII

Constitution to be considered adopted when ratified by nine States.—The Ratification of the Conventions of nine States shall be sufficient for the Establishment of this Constitution between the States so ratifying the Same.

Done in Convention by the Unanimous Consent of the States present the Seventeenth Day of September in the Year of our Lord one thousand seven hundred and Eighty seven and of the Independence of the United States of America the Twelfth. In Witness whereof We have hereunto subscribed our Names.

AMENDMENTS TO THE CONSTITUTION OF THE UNITED STATES

[The following amendments from Articles I to X inclusive were proposed at the first session of the first Congress which convened in New York City on March 4, 1789, and were adopted as follows: New Jersey, Nov. 20, 1789; Maryland, Dec. 19, 1789; North Carolina, Dec. 22, 1789; South Carolina, Jan. 19, 1790; New Hampshire, Jan. 25, 1790; Delaware, Jan. 28, 1790; Pennsylvania, March 10, 1790; New York, March 27, 1790; Rhode Island, June 15, 1790; Vermont, Nov. 3, 1791; and Virginia, Dec. 15, 1791.]

ARTICLE I

Freedom of religion, speech, of the press, and right of petition.—Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances.

ARTICLE II

Right of people to bear arms not to be infringed.—A well regulated Militia, being necessary to the security of a free State, the right of the people to keep and bear Arms, shall not be infringed.

ARTICLE III

Quartering of troops.—No Soldier shall, in time of peace be quartered in any house, without the consent of the Owner, nor in time of war, but in a manner to be prescribed by law.

ARTICLE IV

Persons and houses to be secure from unreasonable searches and seizures.—The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ARTICLE V

Trials for crimes; just compensation for private property taken for public use.—No person shall be held to answer for a capi-

tal, or otherwise infamous crime, unless on a presentment or indictment of a Grand Jury, except in cases arising in the land or naval forces, or in the Militia, when in actual service in time of War or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use, without just compensation.

ARTICLE VI

Civil rights in trials for crimes enumerated.—In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the Assistance of Counsel for his defence.

ARTICLE VII

Civil rights in civil suits.—In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury, shall be otherwise re-examined in any Court of the United States, than according to the rules of the common law.

ARTICLE VIII

Excessive bail, fines and punishments prohibited.—Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX

Reserved rights of people.—The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

ARTICLE X

Powers not delegated, reserved to states and people respectively.—The powers not

delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

[The Eleventh Amendment was proposed to the several states by the Third Congress on March 5, 1794, and declared effective January 8, 1798.]

ARTICLE XI

Judicial power of United States not to extend to suits against a State.—The Judicial power of the United States shall not be construed to extend to any suit in law or equity, commenced or prosecuted against one of the United States by Citizens of another State, or by Citizens or Subjects of any Foreign State.

[The Twelfth Amendment was submitted to the legislatures of the states by the Eighth Congress on December 12, 1803, and became part of the Constitution September 25, 1804.]

ARTICLE XII

Present mode of electing President and Vice-President by electors.*—The Electors shall meet in their respective states and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the government of the United States, directed to the President of the Senate;—The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates and the votes shall then be counted;—The person having the greatest number of votes for President, shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers not exceeding three on the list of those voted for as President, the House of Representatives shall choose immediately, by ballot, the President. But in choosing the President, the votes shall be taken by states, the representation from each State having one vote; a quorum for this purpose shall consist of a member or members from two-thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President whenever the right of choice shall devolve upon them, before the fourth day of

March next following, then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President. The person having the greatest number of votes as Vice-President, shall be the Vice-President, if such number be a majority of the whole number of electors appointed, and if no person have a majority, then from the two highest numbers on the list, the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two-thirds of the whole number of Senators, and a majority of the whole number shall be necessary to a choice. But no person constitutionally ineligible to the office of President shall be eligible to that of Vice-President of the United States.

[The Thirteenth Amendment was offered to the several states by the Thirty-eighth Congress on February 1, 1865, and declared in force December 18, 1865.]

ARTICLE XIII

Section 1

Slavery prohibited.—Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Section 2

Congress given power to enforce this article.—Congress shall have power to enforce this article by appropriate legislation.

[The Fourteenth Amendment was proposed to the legislature by the Thirty-ninth Congress on June 16, 1866 and was approved July 28, 1868.]

ARTICLE XIV

Section 1

Citizenship defined; privileges of citizens.—All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Section 2

Apportionment of Representatives.—Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding

*Amended by article XX, sections 3 and 4, of the amendments to the Constitution.

Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the Executive and Judicial officers of a State, or the members of the Legislature thereof, is denied to any of the male inhabitants of such State, being twenty-one years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such State.

Section 3

Disqualification for office; removal of disability.—No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may by a vote of two-thirds of each House, remove such disability.

Section 4

Public debt not to be questioned; payment of debts and claims incurred in aid of rebellion forbidden.—The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any State shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations and claims shall be held illegal and void.

Section 5

Congress given power to enforce this article.—The Congress shall have power to enforce, by appropriate legislation, the provisions of this article.

[The Fifteenth Amendment was submitted to the State Legislatures by the Fortieth Congress on February 27, 1869, and declared in force March 30, 1870.]

ARTICLE XV

Section 1

Right of certain citizens to vote established.—The right of citizens of the United

States to vote shall not be denied or abridged by the United States or by any State, on account of race, color, or previous condition of servitude.

Section 2

Congress given power to enforce this article.—The Congress shall have power to enforce this article by appropriate legislation.

[The Sixteenth Amendment was proposed to the States by the Sixty-first Congress on July 12, 1909, and became effective February 25, 1913.]

ARTICLE XVI

Taxes on income; Congress given power to lay and collect.—The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.

[The Sixty-second Congress proposed the Seventeenth Amendment on May 16, 1912, and it became a part of the Constitution on May 31, 1913.]

ARTICLE XVII

Election of United States Senators; filling of vacancies; qualifications of electors.

1. The Senate of the United States shall be composed of two Senators from each State, elected by the people thereof, for six years; and each Senator shall have one vote. The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislatures.

2. When vacancies happen in the representation of any State in the Senate, the executive authority of such State shall issue writs of election to fill such vacancies: Provided, that the legislature of any State may empower the executive thereof to make temporary appointment until the people fill the vacancies by election as the legislature may direct.

3. This amendment shall not be so construed as to affect the election or term of any Senator chosen before it becomes valid as part of the Constitution.

[The Eighteenth or Dry Law Amendment was submitted to the legislatures of the several states by the Sixty-fifth Congress and on January 20, 1919, it was announced the amendment would be in full force on January 16, 1920.]

ARTICLE XVIII*

Manufacture, sale or transportation of intoxicating liquors, for beverage purposes, prohibited.—1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof

*Repealed by article XXI, effective December 5, 1933.

into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Congress and the several States given concurrent power to pass appropriate legislation to enforce this article.—2. The Congress and the several States shall have concurrent power to enforce this article by appropriate legislation.

Provisions of article to become operative, when adopted by three-fourths of the States.—3. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

[The Nineteenth or Equal Suffrage Amendment was proposed to the states by the Sixty-sixth Congress on May 19, 1919, and ratified on August 26, 1920.]

ARTICLE XIX

The right of citizens to vote shall not be denied because of sex.—The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

Congress shall have power to enforce this article by appropriate legislation.

[The Twentieth or "Lame Duck" Amendment was proposed to the legislatures by the Seventy-second Congress on March 3, 1932, and ratified by the thirty-sixth state on January 23, 1933. Sections 1 and 2 became effective October 15, 1933.]

ARTICLE XX

Section 1

Terms of President, Vice-President, Senators and Representatives.—The terms of the President and Vice-President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3d day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin.

Section 2

Time of assembling Congress.—The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3d day of January, unless they shall by law appoint a different day.

Section 3

Filling vacancy in office of President.—If, at the time fixed for the beginning of the term of the President, the President elect shall have died, the Vice-President elect shall become President. If a President shall not have been chosen before

the time fixed for the beginning of his term, or if the President elect shall have failed to qualify, then the Vice-President elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President elect nor a Vice-President elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice-President shall have qualified.

Section 4

Power of Congress in Presidential succession.—The Congress may by law provide for the case of the death of any of the persons from whom the House of Representatives may choose a President whenever the right of choice shall have devolved upon them, and for the case of the death of any of the persons from whom the Senate may choose a Vice-President whenever the right of choice shall have devolved upon them.

Section 5

Time of taking effect.—Sections 1 and 2 shall take effect on the 15th day of October following the ratification of this article.

Section 6

Ratification.—This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission.

[The Twenty-first Amendment, repealing prohibition, was proposed by the second session of the Seventy-second Congress on February 20, 1933, and became effective with ratification by Utah, the thirty-sixth state to ratify, on December 5, 1933.]

ARTICLE XXI

Section 1

Repeal of Prohibition Amendment.—The eighteenth article of amendment to the Constitution of the United States is hereby repealed.

Section 2

Transportation of intoxicating liquors.—The transportation or importation into any State, Territory, or possession of the United States for delivery or use therein of intoxicating liquors, in violation of the laws thereof, is hereby prohibited.

Section 3

Ratification.—This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by conventions in the several States, as provided in the Constitution, within seven years from the date of the submission hereof to the States by the Congress.

STATES AND TERRITORIES

BY JOHN G. ROGERS

THE FORTY-EIGHT STATES

Alabama

Alabama ranks fourth in cotton growing but cotton has not been king there for many years. The state is the biggest heavy industry state in the South. It ranks third in iron mining, fourth in lumbering and seventh in coal mining. Cotton goods, iron and steel and saw mill products lead Alabama's manufacturing, which is centered in the 541 mills, mines and factories in and around Birmingham, "the Pittsburgh of the South." This city of some 270,000 population did not even exist in 1870.

Alabama grows more nuts than any state except Georgia, and is high in corn, hay and sweet potatoes. Montgomery, the capital, is a U. S. leader in making commercial fertilizer. Mobile, the only seaport of consequence, is a busy shipper of raw cotton, iron and steel, and hardwood lumber from the slopes of the Alleghenies. Muscle Shoals, on the Tennessee River, provides a great electric power resource.

Alabama's Negro population, just under a million, is the third largest in the Union. At Tuskegee Institute, founded by Booker T. Washington, Dr. George Washington Carver carried out his famed agricultural research.

Hernando de Soto and his treasure seekers first saw Alabama in 1540. Subsequently it was under French, British and Spanish ownership. The Confederacy was founded at Montgomery in February of 1861, and for a time the city was the Confederate capital. Alabama is consistently Democratic in politics.

Arizona

Mining leads the industries of Arizona, which ranks first in copper, second in gold, third in vanadium and fourth in silver. The smelting and refining of copper is far and away the state's principal manufacturing activity. Irrigation—only three states spend more on artificial watering than Arizona—is vital to its agriculture. On land once arid and useless, the state grows cotton, corn, wheat, sorghums, citrus fruit and vegetables. Expanded irrigation promises much for Arizona, where crops grow so quickly that alfalfa can be cut four to seven times a year.

Phoenix, the capital and largest city, is both a popular health resort and a busy shipper of cotton and vegetables. Tucson, too, is a vegetable shipper, and Douglas smelts copper and loads cattle off to market centers. Spaniards in the sixteenth

century were the first white men to breathe the dry, bracing air of Arizona, to look over its mountains, deserts, canyons and valleys.

With the Hopi, Navajo and Apache tribes, Arizona has the second largest U. S. Indian population. It also has some of the country's most famous scenery. In the north is the Grand Canyon of the Colorado River, with a magnificent breadth of from four to eighteen miles, rich not only for beauty but also for geological records many hundreds of centuries old. In the east is the Petrified Forest—pine and cedar trees turned to stone by the action of mineral-laden waters. Entering on Feb. 14, 1912, Arizona was the last state to join the Union. In politics, Democrats have prevailed by a two-to-one margin.

Arkansas

About 90 percent of the nation's bauxite—the source of aluminum—comes from the earth of Arkansas, which also contains North America's only known diamond mine and a versatile set of hot mineral springs owned and operated by the Federal government. Mostly flat with the Ozark Mountains rising in the west, Arkansas has an equable southern climate and fertile central valleys in which crops mature three to four weeks ahead of schedule. The state ranks third in growing cotton and rice, also raises wheat, corn, oats, potatoes and fruit. It stands eighth in oil production and eighth in lumbering, with hardwoods the principal output. Arkansas is first in producing whetstones and antimony ore.

Little Rock, the capital and largest city, stands in the bauxite country and is a processor of cotton seed and lumber. Pine Bluff has one of the biggest U. S. archery factories and is a busy cotton shipper. Fort Smith handles cotton and makes glass and furniture. Hot Springs, with only about 20,000 population, entertains 300,000 guests a year. Its forty-seven famous mineral springs, the only ones administered by the Federal government, are in Hot Springs National Park in the Ouachita Mountains. The curative waters range from 95 to 147 degrees in temperature and once were fiercely contested for by Indian tribes which believed that the Great Spirit was distilled therein. Hernando de Soto, probably the first white man to see Arkansas, explored the area in 1541. In politics, the state is consistently Democratic.

California

California, celebrated for cinema and sunshine and stretched along nearly two-thirds of the U. S. Pacific Coast, is one of the nation's economic giants. It collects more money from raising food and catching fish than any other state, and it stands second in oil production, third in lumbering and seventh in manufacturing. Irrigation, in which California leads the country, makes possible the big crop harvest consisting of virtually every kind of fruit and vegetable, and corn, wheat, sugar beets, walnuts and almonds. Cotton growing is increasing. California stands first in growing grapes and in making wines and brandies.

Ranging from a sub-tropical south to a temperate north with snow-capped mountains, California is broken lengthwise by the coast and Sierra Nevada mountain ranges, with the fertile San Joaquin and Sacramento valleys lying between. Nature is spectacular in California. Death Valley, toward the southeast, is 275 feet below sea level, the lowest spot in the nation. Seventy miles to the north is Mt. Whitney, a 14,495-foot peak, the highest point in the United States. California's Lassen Peak is the only active U. S. volcano, and one of the state's giant redwoods, the General Sherman Tree in Sequoia National Park, is estimated to be 3,600 years old.

Juan Rodríguez Cabrillo, a Spanish explorer, in 1542, was probably the first white man to touch California. The state's settlement boom began in 1849, a year after gold was discovered at Sutter's Mill on the American River. In the next twenty years about a billion dollars in gold was mined. Gold is still found in California but the most important mineral products are oil, natural gas, sand and gravel, lead, tin and cement, in all of which the state ranks very high.

Los Angeles, the fifth largest U. S. city and tenth busiest U. S. airport, makes furniture, autos, clothing, tires and oil products. Hollywood, part of Los Angeles, is the motion picture capital of the world. San Francisco, the eighteenth U. S. seaport, refines oil, builds ships, packs meat and cans vegetables, and also makes tin and steel products. San Diego and Long Beach are big plane-making centers. Sacramento, the capital, cans fruit and vegetables. Berkeley makes soap, ink, engines, pumps and fertilizer. Pasadena is the famed home of the annual Tournament of Roses at New Year's time.

California's four national parks are great tourist attractions and the San Francisco-Oakland and Golden Gate Bridges are among the world's engineering marvels. The state is second to Texas in

railroad mileage. In politics, California fluctuates between Democrats and Republicans.

Colorado

Colorado, the most elevated state in the nation, began settlement with a gold rush near Denver in 1858, but for about the last thirty years the state has been predominantly agricultural. Wheat, hay, beans, sugar beets, corn, potatoes, barley and truck vegetables head the crop list. In the West, only California and Washington surpass Colorado in crop value. In the nation, only California surpasses Colorado in irrigation investment. The state's coal reserves are seventh greatest. Gold and silver still are mined, and the state leads in extracting vanadium and molybdenum.

Denver, the capital, is the financial and commercial capital of the Rocky Mountain region, with no other large city for 500 miles in any direction. It has the world's largest sheep market. Pueblo, "the Pittsburgh of the West," makes iron, steel, brick, tile and foundry products. Greeley has flour and beet sugar mills. Colorado Springs, perhaps the most popular tourist center in the Rocky Mountains, lies near Pikes Peak, the Garden of the Gods and the Cave of the Winds. From its eastern plains area, Colorado climbs westward to many peaks over 14,000 feet. Mount Evans Highway is the highest auto road in the world, and 1,053 feet over the Royal Gorge of the Arkansas River is the highest suspension bridge in the world. The state ranks fifth in national forest area. In politics, Colorado shifts between Republicans and Democrats.

Connecticut

For its early brilliance in turning out firearms and ammunition, Connecticut won the title of "Arsenal of the Nation." And from gun making, with accurate measurement a prime factor, the state went on to develop the U. S. leadership in mass production in precision manufacturing. Though Connecticut is 46th in size, 31st in population, it ranks fourteenth in manufacturing and contains two of the nation's first twenty-two industrial areas.

Connecticut's main cities and a few of their main products: Bridgeport—arms, ammunition, sewing machines, airplanes; Hartford, the capital—arms, typewriters, plane motors; New Britain—hardware, cutlery, edged tools; New Haven—arms, ammunition, hardware, clocks; Stamford—locks, typewriters, pottery, machinery; Waterbury—brass products, in which it leads the nation; and Danbury—hats.

Hartford, which has the oldest U. S. newspaper, "The Courant," established in 1764, is the insurance capital of the nation. Every day Connecticut companies

get a total of \$2,000,000 in cash premiums.

Hilly in the east and west, with a broad central plain, Connecticut devotes its farming mainly to dairying, fruit growing and poultry raising. It stands ninth in tobacco growing and no crop in the nation receives as high a price per acre as Connecticut shade-grown tobacco. Truck gardening is extensive.

Connecticut is a popular resort state, both for its beaches on Long Island Sound and for its inland lakes and forested hills. The southwest part of the state is a suburban area of New York City. Dutch traders from Manhattan began the settlement of Connecticut near Hartford in 1633, and later the English came in from Massachusetts. Their constitution, the Fundamental Orders of 1639, is probably the first written democratic charter. In Connecticut politics, Republicans have held a slight edge.

Delaware

Little Delaware, snuggling against Delaware Bay at the lowest mean elevation of any state, grows a great variety of small fruit and vegetables and is a U. S. pioneer in the industry of food canning. One of the country's oldest and largest canneries is at Dover, the capital. Peaches, strawberries, apples, corn, wheat, hay and truck vegetables are the leading crops. Fishing in the bay and in the Atlantic Ocean is an important industry. Delaware's chicken farms are one of the great supply sources for the big markets of the East.

Wilmington, the home of E. I. du Pont de Nemours & Company, has about half the state's population, does about two-thirds of its manufacturing, including chemicals, leather goods, machine products, hardware, textiles and ships. The first U. S. iron steamship was built on its ways in 1836.

Henry Hudson discovered Delaware Bay in 1609, and the Dutch started settlement of the area in 1631. After the Indians wiped out the Dutch, Delaware was under the Swedish flag for a time. Kaolin clay, mined in the north, is the state's only mineral of consequence. Under a law of 1771, Delaware still maintains the whipping post as punishment for some crimes. In politics, Democrats and Republicans give and take with about equal success in Delaware.

Florida

Agriculture is Florida's biggest steady pursuit, but hotel statistics point the clue to its chief fame—the resort and tourist business. Though only middling in size and population, Florida has 848 hotels, a number exceeded only by New York and California. Along its coast line, the longest of any state, dozens

of communities more than double in population during the winter season when northerners flee the snow and cold.

Oranges and grapefruit lead Florida's crop list, then come tomatoes, peanuts, corn, celery and potatoes. The state's truck gardens are early and large suppliers of northern tables. Florida is tenth in commercial fishing. Deep sea fishing for sport is a leading tourist hobby. Florida is the U. S. leader in mining and shipping phosphate rock.

Florida's low elevation, second lowest among states, is dotted by some 30,000 small lakes, and the dismal Everglades swamp in the south. Tallahassee, the capital, at 216 feet, is a high place in Florida. Tampa is one of the largest cigar manufacturers. Miami is a busy fruit shipper. Jacksonville ships lumber and turpentine, two of the state's leading products. St. Petersburg has long been popular as a winter resort. Ponce de León first saw Florida in 1513, seeking the Fountain of Youth. St. Augustine, founded by Spaniards in 1565, was America's first city of European origin. Florida is consistently Democratic in politics.

Georgia

Georgia, the largest state east of the Mississippi, is typical of the changing South. The value of its factory products has overhauled and passed the value of its farm products, and industrialization is ever increasing. Atlanta, the capital, largest city and the leading commercial and financial center of the Southeast, is achieving importance as an automobile maker. Cotton and lumber products, fertilizer, processed food and a great variety of other items are among the factory output of Macon, Augusta and Savannah.

Georgia ranks first in sea island cotton, sixth in all cotton and sixth in tobacco. It is first in peanuts and pecans and grows four times as many commercial nuts as any other state. Georgia's peaches are nationally famous. Georgia is fifth in lumbering. From its vast stands of pine come more than half of all U. S. resin and turpentine, and Savannah is the world's biggest market for naval stores. Second in the mining of mica, the state is one of the U. S. leaders in the value of its clay products. Cattle grazing is extensive. Georgia marble is widely exported.

Hernando de Soto, a Spaniard, in 1540 first looked over the red clay of Georgia, sloping upward to the Blue Ridge Mountains in the north and northwest. James Oglethorpe began settlement in 1732, founding a British colony as a refuge for debtors and seekers of religious freedom. Sherman burned Atlanta and devastated a great slice of Georgia in the Civil War.

At Warm Springs is the infantile paralysis foundation founded by President Franklin D. Roosevelt who died there on April 12, 1945. Georgia is consistently Democratic in politics.

Idaho

Idaho's huge investment in irrigation—the third largest in the nation—has put its agriculture well ahead of its mining. Idaho potatoes are eaten everywhere. Near Mesa is the world's largest individually-owned fruit orchard. The state ships more apples than any state except Washington, and grows many other fruits, wheat, corn and barley. Boise, Pocatello, Idaho Falls, Nampa and Twin Falls—all are busy shippers of produce, meat and wool. There is light diversified manufacturing and Pocatello has a cheese factory with a world market.

Lewis and Clark visited Idaho in 1805, but real settlement began with the gold strike of 1860. Idaho mines gold, silver, lead, zinc, copper and tungsten, and still has vast undeveloped mineral wealth. In its rugged central mountains is an area several times the size of Switzerland that is reachable only by pack horse. Until a few years ago it was impossible to motor between north and south Idaho without detouring through Oregon and Washington.

Tourist trade is important to the state. Hunting and fishing are excellent. Sun Valley is a famed winter resort. Shoshone Falls on the Snake River is forty-six feet higher than Niagara, and Hells Canyon of the Snake is much deeper than the Grand Canyon. Politically, Idaho switches back and forth, with the Democratic party holding a slight edge.

Illinois

Illinois anchors the Midwest like a rich giant, versatile in every big wealth-making industry. It stands third in manufacturing, third in coal mining, fourth in farm cash income, sixth in oil production. The sprawling Chicago district (including a slice of Indiana) is a close second to Pittsburgh's area in iron and steel production. Chicago proper leads the nation as a meat packer and grain exchange, and is the second city in commerce, manufacturing and population.

Transportation alone makes Illinois stand out. Chicago is the largest U. S. rail center, the busiest long-flight airport city, the fourth busiest Great Lakes port. The state as a whole is third to California and Texas in railroad track mileage. The Wabash, Ohio and Mississippi rivers are much used water routes.

As a farmer, Illinois stands first in soy

beans, second in corn, third in oats. Its fertile flatness—it is the third most level state—also grows wheat, barley, rye, potatoes, hay and truck vegetables. It is near the top in hog raising, and dairying is an important industry. Bituminous coal underlies more than half the state, which leads in production of peat. Prospectors still are finding new oil pools to tap. The Illinois sand and gravel business is exceeded only by that of California. Fluorspar, iron ore and primary zinc also are mined.

Illinois manufactures just about everything. Besides packing meat and forging steel, Chicago makes railroad cars, clothing and a host of other products. Rockford makes furniture. Peoria is famous for tractors and liquor. Moline makes farm implements. Elgin makes watches. The biggest government arsenal in the world stands on a Mississippi island off Rock Island. East St. Louis, a major U. S. rail and stockyard center, makes chemicals, bottles, railroad equipment, and products of brick, tile, oil and aluminum. Springfield, the capital, where Abraham Lincoln lived and is buried in Oak Ridge Cemetery, makes electric meters and heavy road-building machinery.

French traders and missionaries, late in the seventeenth century, were the first white men in Illinois. Marquette and Joliet, in 1673, were the first known explorers. Politically, Illinois is divided. Chicago, where nearly half the population lives, is controlled by a Democratic machine. Downstate Illinois is generally Republican.

Indiana

Indiana's fifty-mile water front on Lake Michigan is one of the great industrial centers of the world, turning out iron and steel and oil products that lift this otherwise largely agricultural state to ninth place in U. S. manufacturing. The component cities—East Chicago, Gary, Hammond and Whiting—have some of the world's largest industrial plants, and their great output is further swelled by the inland factories of South Bend, Indianapolis, Fort Wayne, Evansville and Terre Haute. The list of products is endless—automobiles, farm implements, aviation and railroad equipment, sewing machines, machinery of all kinds, and tons of raw steel—all made from iron ore mined in the Great Lakes region.

As a miner, Indiana ranks sixth in coal, and high in limestone which is shipped over the nation and abroad. As a farmer, Indiana stands third in soy beans, fourth in corn, thirteenth in tobacco, high in onions, also grows wheat, oats, rye and tomatoes. The canning of vegetables and juices is an important industry, and the

state produces two-thirds of all U. S. peppermint and spearmint oil.

Level in the north, Indiana climbs to a hilly south, into the limestone area where Wyandotte Cave is the second largest U. S. cavern. Indianapolis, the capital, is the largest U. S. city not on a navigable body of water. Its site, in the state's middle, was determined when Congress gave Indiana the specified area in which to build a capital in 1816. French Lick and West Baden are mineral spring and resort centers. French traders, in the early eighteenth century, explored Indiana first. Over the years, Republicans have held an 8 to 5 edge over the Democrats in Indiana.

Iowa

Iowa stands in a class by itself as a producer of corn and hogs. The state's leadership in those departments often brings it the largest agricultural income in the nation. Ninety percent of the state is under the plow and the fertility of its soil is unsurpassed anywhere. It ranks second in oats and soy beans, also grows hemp, hay, popcorn, timothy, fruit, nuts and vegetables in great quantity. Its hens lay more eggs than any other state's.

Meat packing, centered in Sioux City, is the top manufacturing industry. Des Moines, the capital, leads the world in publication of farm journals, is one of the chief U. S. insurance centers. Cedar Rapids and Waterloo are busy food processors. Muscatine is the largest U. S. maker of pearl buttons. Council Bluffs, with only about 40,000 population, is the fifth U. S. rail center. Other Iowa factory products are farm implements, washing machines, fountain pens, and railroad and auto equipment. Coal mining runs to 4,000,000 tons a year.

Marquette and Joliet, Frenchmen, first explored Iowa in 1673. One hundred and fifteen years later Julien Dubuque named the first settlement after himself. German and Scandinavian stock dominates in Iowa and the state is usually Republican in politics. Iowa has the lowest U. S. illiteracy rate. With more than 9,000 track miles, it is fourth as a railroad state. The first Mississippi River railroad bridge went up at Davenport in 1853, and the Palmer School of Chiropractic, first in the country, was founded there in 1903. Herbert Hoover, the first President from west of the Mississippi, was born in the Iowa hamlet of West Branch.

Kansas

First in wheat, first in flour milling, fifth in oil, close to the top in cattle, flat fertile Kansas lies in the U. S. geographical center. In the east, where Kansas City stands second only to Chicago in slaughtering

and meat packing, is midwest corn country with small farms. In the west, where Dodge City once was a roaring, lawless cattle town, is the short-grass prairie land, rich for grazing, richer still for winter wheat. Corn, sorghums, oats, barley, soy beans and potatoes are other crops. Besides oil, Kansas gets zinc, coal, salt and lead from its earth.

In some years a tenth of the nation's meat packing is done in Kansas City, which adjoins Kansas City, Mo. The city handles ten million head of livestock a year, has the world's largest grain elevator, and is the U. S. leader in producing hog serum and black walnut lumber. Topeka, the capital, and Wichita also are busy meat packers and flour millers.

Fossil beds show that giant reptiles once roamed over Kansas. Spanish Coronado saw the area first in 1541 in his vain search for the mythical city of Quivira. Three hundred years later Kansas was a bloody battleground over slavery. John Brown killed slavers there before he went east to more ambitious projects. Kansas is one of the three states which prohibit the legal sale of hard liquor. Its vote is normally Republican.

Kentucky

Some of the nation's best tobacco, horses and whisky come from the gentle slope of Kentucky, running down to the Mississippi and Ohio Rivers from its mountains in the east. The state stands first in the production of native asphalt and hemp, second in growing tobacco, fourth in mining coal and making tobacco products, tenth in corn and oil, high in hemp. Wheat, oats and cotton also are grown.

Louisville, the largest city, famed for the Kentucky Derby at Churchill Downs, makes whisky, furniture, cigarettes and aluminum ware. Lexington is a big tobacco market and stands in the Blue Grass country, a principal U. S. center for breeding fine race and saddle horses. Frankfort, the capital, makes brooms, shoes and lumber products. Covington makes X-ray machinery, textiles, iron and steel products. Owensboro is a large tobacco market with diversified manufacturing. Besides coal and oil, Kentucky's important minerals are natural gas and quarry products.

Marquette and Joliet, French explorers, in 1673 first saw Kentucky when it was "The Dark and Bloody Ground," fiercely contested by Indian tribes. Daniel Boone explored the country in 1760. Mammoth Cave, in the central portion, is one of the nation's natural wonders, with passages twisting for miles under the earth. The house in which Stephen C. Foster wrote "My Old Kentucky Home" is still standing near Bardstown in a state park. The

cabin in which Abraham Lincoln is believed to have been born is preserved in a national park near Hodgenville. Kentucky is usually Democratic, though Republicans win at times.

Louisiana

Semi-tropical Louisiana, astride the mouth of the Mississippi, leads the nation in fur trapping. In some years its rich bag of mink, muskrat, opossum and raccoon is a greater pelt total than that of Canada and Alaska combined. The state, which calls its counties parishes after the old Spanish religious divisions, is high in other production—first in growing rice, sugar cane and sweet potatoes, and in shrimp fishing; second in sulfur, third in oil, fourth in salt, ninth in cotton, eleventh in lumber. In all commercial fishing, it is seventh.

Louisiana's lowest land is below sea level and lower than any U. S. spot except Death Valley. New Orleans, the sixth busiest U. S. seaport and home of the Mardi Gras, avoids flooding only by an expensive levee and spillway system and the world's largest concentration of drainage pumps. New Orleans' industry is steadily tending to make increased use of raw materials from South and Central America. Baton Rouge, the capital, produces chemicals and synthetic rubber, and has one of the world's largest oil refineries. Shreveport refines oil and makes fertilizer. Monroe makes paper, ink, lumber and brick products.

Some of the state's cotton, rice and sugar cane grow on the "trembling prairies," springy coastal marshlands protected by dikes. Corn, truck vegetables, citrus fruit and pecans are other products. Hernando de Soto, in 1540, was probably the first white man to see Louisiana. In politics, the state is steadily Democratic.

Maine

When the sun rises in the morning, the first spot in the nation to feel it is the peak of Mount Katahdin, rising 5,273 feet in central Maine. This state at the northeastern tip of the country is the U. S. leader in growing potatoes, in producing pulp and paper. It also is supposed to be a political barometer. While all other states hold general elections in November, Maine votes in September, giving rise to the adage, "As Maine goes, so goes the nation." It is not always true. Maine is almost invariably Republican.

Virtually all of Maine's manufacturing cities make paper or pulp products. In addition, Augusta, the capital, makes cotton goods and shoes. Portland, the largest city, makes textiles, cans sardines and blueberries. Canning and the making of

cheese and canoes are important in the Bangor area. Textiles, sheeting and ging-ham come out of Lewiston's mills. Tanneries, machinery works and boot and shoe plants are scattered along the state's rivers.

Samuel de Champlain, French explorer, looked over Maine's rugged, forested area in 1604, but the Cabots had visited the region a century before. Settlement began three years later and Maine was first in the English colonies here to build a church, a ship and a blockhouse. After the potato, crops are hay, oats, buckwheat and apples. With 2,465 lakes, hundreds of streams and a bracing summer climate, Maine is famous as a resort state. Fishing is excellent and deer, bear and other game are plentiful.

Maryland

In some years, one out of every three cans of tomatoes opened in the United States comes from small, odd-shaped Maryland, which is almost cut in two by the upthrust of Chesapeake Bay. The state is a leader in all vegetable canning, and is one of the largest chicken raisers in the East. With nineteen streams in its small area, Maryland has more river frontage than any other state. Baltimore, well up Chesapeake Bay, is the nation's third busiest seaport, and a national leader in the surety or bonding business. Maryland holds fifteenth place in U. S. manufacturing. Baltimore makes planes, steel, clothing, fertilizer, chemicals and is a big meat packer. Frederick is a center of flour milling, vegetable canning and butter making and also turns out electrical machinery. Cumberland and Hagerstown have diversified manufacturing. Annapolis, the capital, is the site of the United States Naval Academy.

Low and flat on the Atlantic Ocean and Chesapeake Bay, Maryland rises to a mountainous west. In tobacco growing, the state ranks tenth and, in addition to all kind of vegetables, it grows wheat, hay, corn, potatoes and barley. Coal, sand and gravel, cement and stone are the leading mineral products.

Maryland's settlement began in 1634 at St. Mary's under an English charter to Lord Baltimore. The state capitol, built in 1772, is the only one besides that of Massachusetts to antedate the Revolution. Maryland still retains the whipping post for punishment of some crimes. Democrats hold the edge in Maryland politics.

Massachusetts

From the beginning of American history Massachusetts has led the nation in the making of textiles, and Boston, the capital, has been the biggest U. S. wool market. Until recently, when California moved

at the top, Massachusetts held an unbroken lead in commercial fishing. In all manufacturing, the state stands in eighth place and despite the great dominance of textiles, its factories are famous for a great variety of products. Within its borders are four of the twenty-seven busiest U. S. industrial areas.

Lynn has been making boots and shoes since 1636. Waltham, the site of the first U. S. power loom, became notable for watch making. Cambridge turns out soap, candy and machinery. Worcester makes machine tools and wire products. Springfield is a big small arms producer for the Army, and also makes motor vehicles and electrical machinery. Lawrence is the nation's biggest worsted cloth center. Fall River makes clothing and Lowell has 400 plants of diversified output.

Massachusetts, fairly level and rising to the Berkshires in the west, was possibly looked over by Eric the Red and his Norsemen as early as 1000. The crossing of the Mayflower and the landing of the Pilgrims in 1620 began its long and significant role in U. S. history.

Boston, the ninth U. S. city in size, and the ninth busiest U. S. seaport, is especially rich in historical lore. It was a prime mover in the Revolution during which Faneuil Hall became known as "The Cradle of Liberty." From the tower of Christ Church, on Copp's Hill, were flashed the lanterns that began Paul Revere's celebrated ride. And the Battle of Bunker Hill was fought at Boston.

In the glory of the old whaling days, New Bedford and Nantucket were famous ports. Both still are big fishing ports, although first place in the state's commercial fishing shifts between Boston and Gloucester. In some years Massachusetts leads the nation in growing cranberries. Other crops are tobacco, potatoes, wheat, corn, oats, buckwheat and apples. Maple syrup and sugar are made in good quantity. Massachusetts granite and marble are used all over the nation. Employment in Massachusetts factories was long a strong magnet for European immigration, and Boston, in particular, has a large Irish population. Over the years, Republicans hold the edge in the state's politics.

Michigan

On the map of Michigan, draw an eighty-five-mile circle around Detroit and it will contain the home plants of the companies that make nine out of ten American automobiles. The vast auto industry which sprang fifty years ago out of Michigan's carriage-building business puts the state fifth in manufacturing, makes Detroit the third U. S. industrial center. Flint and Pontiac share the auto honors with De-

troit. Dozens of other communities make parts or bodies.

Michigan's diversified industry also is great, ranging in output from airplanes to flypaper. Grand Rapids is the U. S. furniture center. Lansing, the capital, makes Diesel engines, hoists and pumps. Bay City makes cigars and heavy machinery. Saginaw makes sugar and boilers. The state leads in making refrigerators, stands third in drugs and medicines.

First explored by French Jean Nicolet in 1634, Michigan is the only state split completely in two large parts. The north peninsula, between Lakes Superior and Michigan, is mining and timber country. The southern one, between Lakes Michigan and Huron, is agricultural and manufacturing country.

Connecting Superior and Huron is the busiest canal in the world—the Sault Ste. Marie. During eight months of the year it handles more than a hundred ore and grain ships each day. Two of its five locks are the world's longest.

Michigan is great for more than factories. It is the U. S. leader in salt-making. It is second in mining iron ore. It once led in copper, is now sixth, but its copper ore is still richest per pound.

Rugged and forested in the north, the state slopes down to fertile farm areas. It ranks second in growing dry beans, fourth in grapes and peaches, seventh in potatoes, high in sugar beets. Its 6,000 inland lakes and 2,300 miles of Great Lakes shoreline make it a good vacationland. Over the years, Republicans have held a strong edge in Michigan politics.

Minnesota

A few square miles in northern Minnesota contain perhaps the most precious of U. S. natural resources. The Mesabi, Cuyuna and Vermilion Ranges pour out from 60 to 70 percent of all the nation's iron ore. The shipping of the rich material makes the Lake Superior port of Duluth (with Superior, Wis.) the second busiest U. S. port, its tonnage exceeded only by New York.

Farm and factory are equally important in Minnesota. It is first in growing oats and making butter, second in eggs and milk, near the top in farm cash income, high in corn, wheat, potatoes, rye and barley. Minnesota was once important in lumbering but greedy exploitation ruined its forests for commercial production. It is a great summer resort state with more than 11,000 lakes, one of them being Lake Itasca, the source of the Mississippi.

Minneapolis, the chief business center of the northwest, is one of the nation's largest flour millers, and also makes electric machinery, furniture and foundry

products. St. Paul, the capital, is the world's largest publisher of law books, and is a leader in advertising specialties. South St. Paul is a U. S. leader in stockyards capacity. Meat packing and food processing are important in many communities. Minnesota, with its southern half a rolling plain, was first seen in about 1655 by Radisson and Groseilliers, French traders from Canada. Scandinavian elements predominated in its settlement. The state is famous for its lake fishing, and deer, bear and fur animals are still plentiful in the forested north. In politics, Minnesota is usually Republican.

Mississippi

Mississippi, one of the least industrial of states, is a stronghold of the Old South. Many of the old plantations remain intact and the world's largest cotton plantation, of 35,000 acres, is at Scott. The state is one of the two in the nation in which more than half of the population makes a living directly from the soil. It ranks second in cotton, also grows corn, peanuts, oats, pecans, sugar cane. It stands sixth in lumber production. Oil is a recent but increasingly important product.

Despite its agricultural character, Mississippi reflects the southern trend toward industrialization. Since 1933 the value of its factory products has increased about 450 percent; the number of factories, 100 percent; factory wages paid, 575 percent. Jackson, the capital and largest city, makes cotton, iron and lumber products. Vicksburg refines oil. Laurel is the home of the Masonite Corporation, has the world's only sweet potato starch plant. Meridian and Greenville make cotton goods.

Hilly in the east, the state slopes toward the Mississippi River. Spanish Hernando de Soto first saw it in 1540. It supplied a turning point in the Civil War when Grant took Vicksburg on July 4, 1863, at terrific cost. Mississippi was first to ratify the 18th amendment, is one of the three states which ban the sale of hard liquor. It has the second largest U. S. Negro population. In politics it is overwhelmingly Democratic.

Missouri

Missouri touches both South and North, ranks high in both farm and factory, and leads the nation in mining lead, making corncob pipes and breeding mules. Corn, wheat, oats, barley, sorghums, potatoes, tobacco and cotton grow on its fertile table land, which climbs to the Ozark Mountains in the southwest. The state is fourth in production of eggs, fourth in mining zinc and fifth in growing soy beans.

The industrial might of Kansas City and St. Louis lifts Missouri into thirteenth place as a manufacturing state. The ninth

U. S. industrial city, St. Louis, assembles and makes automobiles, shoes, drugs, chemicals, beer, street cars, and is one of the largest U. S. fur markets. Kansas City, which adjoins Kansas City, Kans., makes steel and flour, packs meat, refines oil, and is the second largest U. S. horse and mule market. St. Joseph and Jefferson City, the capital, are busy at diversified manufacturing. Cement is an important Missouri product.

St. Louis and Kansas City both are among the great U. S. rail centers. The Eads Bridge, over the Mississippi at St. Louis, is said to handle more freight cars than any other bridge in the world.

The French explorer, La Salle, first saw Missouri in 1682. Mississippi River traffic, still in big volume to St. Louis today, was a big factor in settlement, in which German stock predominated. The homes of two of Missouri's most publicized sons—Mark Twain and Jesse James—are well-visited tourist attractions. In politics, Missouri runs to the Democratic side, although there are occasional Republican inroads.

Montana

Montana's history is the old Western story—there were few settlers until a gold strike in 1858, after which they came in rapidly. Today the state takes lead, zinc, silver, coal and oil from the earth, but copper is the big cash mineral product. Butte, the largest city, sits on "the richest hill in the world," made of mines which once supplied half of U. S. copper. Anaconda has the world's largest non-ferrous reduction plant, and Great Falls, too, is a copper refiner. Billings has large beet sugar factories, and is a big shipper of cattle and flour. The main street of Helena, the capital, used to be Last Chance Gulch, of gold dust fame.

Agriculture, greatly dependent on irrigation, has become the state's leading industry. Curiously, it spread from west to east, after the first crops and cattle were raised in Montana's Rocky Mountain western part to sell to the miners. The state is seventh in wheat growing, also raises barley, oats, corn, potatoes and fruit. Livestock, wool and lumber are Montana's major products.

French explorers from Canada, in 1742, were the first white men to see Montana, which has some of the most rugged of U. S. scenery, particularly in the Glacier National Park area. The state is popular for hunting, fishing and dude ranching. On Yogo Creek, in the Judith Basin, is a sapphire mine which produces half of the nation's output of precious stones. An increased industrial future is possible for Montana because of the fine water power

potential. In state politics, Montana is usually Democratic, but it has fluctuated over the years in national politics.

Nebraska

Centuries ago Nebraska was the floor of an inland sea and today it is a great sea of grain. The state ranks second in rye, third in corn and wheat, fifth in barley and seventh in oats. In its fertile soil grow 200 varieties of grass—a number not exceeded by any other state. Nebraska is one of the largest producers of dry beans. Its sizeable cattle and hog industry help to make Omaha the country's fourth rail center, one of the greatest stockyard and meat-packing centers. One of the world's largest creameries is at Lincoln, the capital. Flour, freight cars, brick and tile are other Nebraska factory products. Oil was discovered in 1939 and built to a 5,000,000-barrel production.

Coronado, the Spaniard, saw Nebraska first in 1541 while searching for Quivira, a mythical city of wealth. Three hundred years later the state was a crossing ground for the California, Denver and Oregon trails and the Pony Express.

Nebraska has large German and Scandinavian elements. In twenty national elections since 1868 it has gone Republican thirteen times. In 1937 Nebraska opened the first one-house Legislature in the country, a body to which members are elected without party designation.

Nevada

Famous in U. S. history for the fabulous Comstock Lode, famous in headlines for easy divorce, Nevada is the sixth state in size but smallest in population. Against a national average of 46.3 persons per square mile, Nevada counts little more than one per square mile. Its history is almost a story of its mines which have given up large quantities of gold, silver, copper, lead, zinc, quicksilver and tungsten.

Nevada created new industries in 1931 by requiring only a six weeks' residence for divorce and by legalizing gambling. The gaming tables now pay a 1 percent business tax. Tourists also are drawn by the grand spectacle of Hoover Dam, the world's highest, on the Colorado River, near Las Vegas. Nevada's crops, mainly wheat, barley and potatoes, virtually depend on irrigation. Its manufacturing, in creameries, planing mills, food and meat plants, is of only local importance.

Francisco Garcés, a Franciscan friar, enroute to California in 1775, first saw Nevada's rugged scenery. Fifty years later Hudson's Bay trappers entered the area from the north. Until the discovery of the Comstock Lode, the population was about a thousand, but the rush for gold and

silver brought in more than 50,000. Today, the largest city, Reno, is little more than 20,000. Carson City, the capital, is only 2,500. Nevada was first in the world to use gas for capital punishment. Politically, it fluctuates between Democrats and Republicans.

New Hampshire

New Hampshire is the only state that ever played host to the formal conclusion of a major foreign war. The scene was Portsmouth, the state's principal Atlantic port, where the treaty settling the Russo-Japanese War was signed in 1905. Fairly level and flat in the Portsmouth area, New Hampshire rises in the north to the White Mountains, the highest in New England. The world's strongest wind velocity—231 miles per hour—has been recorded atop Mt. Washington.

The sandy and stony loam of New Hampshire needs liberal fertilization for the growing of its principal crops—fruit, truck vegetables, corn, oats, hay and potatoes. The state's farming runs strongly to dairying. Mica, feldspar, clay and granite are the principal mineral products of New Hampshire's rugged earth. With 1,300 lakes and good climate for both winter sports and summer vacations, the state is highly popular as a resort area.

Sixty percent of its manufacturing is in textiles, leather goods, and pulp and paper products in the factories of Manchester, Berlin, Dover and Nashua. Shoes are another important product. Martin Pring, an English sailor, first looked over New Hampshire in 1603 and its settlement began twenty years later at Portsmouth and Dover. Two houses, built in 1664 and 1668, still stand in Portsmouth. Over the years, Republicans hold the edge in New Hampshire politics.

New Jersey

New Jersey is the fourth smallest of states but it pulls a mighty oar in the U. S. economy as one of the most intensely industrial areas in the nation. The state's thousands of plants make virtually everything from pins to battleships to give it sixth place in U. S. manufacturing. The northern manufacturing section is sometimes called America's Ruhr.

Hilly in the north, New Jersey slopes to a low, flat, southern end crammed with truck gardens growing a great variety of fruit and vegetables for the state's own big cities, for New York and Philadelphia. In commercial fishing off an Atlantic coast line that is studded with summer resorts, New Jersey ranks ninth.

Giovanni da Verrazano, a Florentine sailor carrying French papers, first saw New Jersey in 1524. In subsequent settle-

ment the state became rich in U. S. lore and Colonial history. The oldest U. S. highway, built in 1650, can still be seen in Warren County. The first U. S. lighthouse was erected at Sandy Hook in 1764. Good transportation and proximity to raw materials and big markets marked the state for industrial development.

New Jersey leads the nation in dyed and finished textiles; chemicals, paints and varnish; elevators and elevator equipment; and tanning materials and dyestuffs. Newark, the largest city, has more than 1,300 factories, is a big insurance center. Trenton, the capital, is famous for pottery and clay products. Paterson is the U. S. silk center. Camden makes everything from pen points to talking machines to warships. Other humming industrial cities are Jersey City, Passaic, Kearney, Elizabeth, Bayonne and Hoboken.

New Jersey's seaports are among the busiest, but they are counted as part of the Port of New York. Atlantic City, Ocean City, Cape May, Asbury Park, Ocean Grove and Wildwood are the principal coast resorts. New Jersey mines zinc and clay, is second in U. S. peat production. In politics, the state fluctuates between Democrats and Republicans.

New Mexico

Mountainous New Mexico, fourth in size and fourth in high elevation, is devoted to mining, cattle raising and agriculture that is virtually dependent upon irrigation. Santa Fe, the capital, is the oldest seat of government in the nation. It was founded in 1605 by the Spaniards and on its central plaza there still stands an ancient adobe building known as The Palace, built in 1610 and used until 1909 as the official home of the Spanish, Indian, Mexican and American governors. Rich in aboriginal history, New Mexico has been a treasure chest for students of such early Americans as the Pueblo Indians and their communal civilization. In the north the Navajos live on a 16 million acre reservation, the nation's largest.

On once arid but now irrigated land, New Mexico grows corn, wheat, potatoes, sorghums, cotton, vegetables, sugar beets and fruit. As a miner, the state ranks second in tin, and fourth in copper, zinc and vanadium. It has a substantial lumber industry in pine and Douglas fir. Some oil is produced and the state has vast undeveloped coal resources.

Albuquerque, the largest city, turns out a variety of small manufacturing products. The state's dry and healthful climate makes Santa Fe and other communities well patronized health resorts, especially for persons suffering from lung ailments. Cabeza de Vaca, the Spanish explorer, tra-

versed New Mexico first in 1528-36. In politics the state tends to support the Democratic party.

New York

New York, with the great metropolis of New York City, is the spectacular nerve center of the nation. It leads in population, manufacturing, foreign trade, commercial and financial transactions, book and magazine publishing, theatrical production and in a host of other fields. It is the principal key state in any national election, and so significant in the life of the country that any New York governor is almost automatically a Presidential possibility.

New York City, where more than half the state's population lives, is not only a national but an international leader. It is the busiest seaport in the world, loading and unloading scores of ships each day. LaGuardia Field is the world's largest commercial airport and an even greater one, Idlewild Airport, is on the way to completion. New York City's annual bank clearings are nearly 50 percent greater than the combined total of the next fifteen U. S. cities, and a stormy day in the great financial community of Wall Street causes repercussions around the globe. First in manufacturing since 1824, the city today has a gigantic clothing and fur industry, and also makes chemicals, paints, drugs, machinery, paper, wood and textile products. Manhattan, the principal of the city's five boroughs, has the tallest buildings in the world.

New York City's factories and workshops account for 60 percent of the state's 7 billion dollars of annual manufacturing value. Nearly all the rest of the state's manufacturing is done along the Hudson River north to Albany, and the New York State Barge (Erie) Canal west to Buffalo. The third busiest Great Lakes port, Buffalo makes planes and flour, and products of rubber, iron, steel, meat, grain and chemicals. Rochester leads the world in making photographic and optical equipment. Troy is the largest U. S. shirt and collar center. Utica is a big textile city and makes a third of all U. S. knitted underwear. Syracuse makes typewriters, washing machines, auto bodies and parts, and heavy implements. Albany, the capital, on the Hudson River, has important diversified manufacturing.

Except for the busy belt from New York City to Albany to Buffalo, New York's economic life is distinguished only by an intense devotion to dairying and fruit and vegetable growing to supply the daily food needs of the great urban centers. It is one of the U. S. leaders in milk and cheese production, and in growing such table staples as potatoes, onions and cabbages. The state

ranks second to California in growing grapes and has a big wine industry.

New York is level or hilly in the west and central parts and broken by the Adirondack and Catskill mountains in the east. It ranks second in production of salt, and eleventh in oil, the wells being in the southwest, adjacent to Pennsylvania fields. Iron ore and zinc are found in small quantities.

The state leads the nation as a tourist attraction. The convention and tourist business is New York City's fifth greatest source of income, and there are famous resort areas upstate in the mountains, and around Lakes George and Champlain. Lake Placid is notable around the world as a winter sports center. Long Island is another of the state's playgrounds. Trudeau Sanitarium, at Saranac Lake, was first in the world to treat tuberculosis on a large scale.

Henry Hudson, an Englishman working for the Dutch, first saw New York in 1609 when he sailed up the Hudson to Albany. In the same year Samuel de Champlain, the Frenchman, came down from Canada and named a big lake after himself. On the basis of Hudson's work, the Dutch bought Manhattan island from the Indians for \$24 worth of trinkets and set up the colony of New Amsterdam. In 1664 the English seized the colony and renamed it New York. One of the decisive battles in world history was fought at Saratoga in the Revolution in 1777 when the Americans defeated Britain's big campaign to cut the colonies in half. For a short time New York City was the United States capital, and George Washington was inaugurated there as first President on April 30, 1789. New York is Republican upstate and Democratic in New York City. In both national and state elections, control has divided over the years between the two parties.

North Carolina

North Carolina is the nation's busiest tobaccoist. It grows 40 percent of all U. S. tobacco, about 70 percent of all U. S. leaf cigarette tobacco. Its factories—the biggest are at Durham and Winston-Salem—make more than half of the more than 350 billion cigarettes that the country smokes in a year. Adding to this the output of the cotton mills and clothing factories of Charlotte, Durham, Greensboro, Winston-Salem, and Raleigh, the capital, North Carolina stands twelfth in the nation in manufacturing. And with corn, cotton, hay, peanuts and fruit added to the huge tobacco crop, it ranks among the top leaders in agriculture.

North Carolina's mountains are believed to be the oldest in the country. Mt. Mitchell, at 6,684 feet, is the highest east of

the Mississippi. The state's many streams and falls give it the fourth best U. S. potential in hydroelectric power. It leads in the mining of mica, feldspar and bromine, is second in asbestos. It ranks seventh in lumber production and, in Great Smoky National Park, has the largest U. S. stand of red spruce. Furniture manufacture is growing in importance. The resort business, both at the shore and in the mountains, is extensive.

The English made their first, but unsuccessful, attempt to settle North America at Roanoke Island in 1584. Virginia Dare, the first white child of English parentage in North America, was born there in 1587. In the Civil War, North Carolina lost more men than any other state. In politics, North Carolina is regularly Democratic though it broke the Solid South tradition in 1928 by voting Republican in the national election.

North Dakota

"Number One Northern Hard"—a famous grain grading—defines a wheat first grown in North Dakota, one so good it gets a 10 to 16 percent price premium. The Red River Valley, immortal in U. S. folk song, is important to North Dakotans as a remarkably fertile bread basket. The state ranks first in spring wheat, first in barley, second in all wheat, third in rye, sixth in oats. A total of 87 percent of its acreage is farm land. Most of its manufacturing—the making of butter, cheese, flour and milk products—is tied directly to the land.

Bismarck, the capital, has recorded the greatest U. S. temperature extreme—from 114° above to 45° below zero. Fargo is the largest city. Geologists believe that North Dakota holds two-thirds of American deposits of lignite. Mining and processing of lignite is a growing industry.

A French fur trader known as Verendrye first entered North Dakota from Canada in 1738. Sacajawea, a Shoshone Indian woman, is probably North Dakota's most notable person. In 1805 she joined Lewis and Clark and made herself so useful as guide and diplomat that the expedition might have been lost without her. Dakota Territory was separated into North and South Dakota in 1889. Politically, North Dakota usually is Republican, but in times of agricultural depression, it has shown strong liking for third parties promising quick relief.

Ohio

With vast coal and oil fields at one hand, with Great Lakes iron ore close by at the other, Ohio automatically developed into one of the nation's greatest industrial states. It ranks fourth in all manufacturing and contains three of the first seven-

teen U. S. industrial areas. Cleveland, the largest city, is the world's biggest handler of iron ore. In all, six Ohio cities place among the fifteen busiest Great Lakes ports.

Cleveland's vast and varied factory output includes the U. S. leadership in wire, nails, nuts and bolts. Akron's many rubber plants can make more than 125,000 tires a day and, before synthetic rubber, used half of all U. S. crude rubber imports. Cincinnati makes tools and paper and is a national radio center. Canton and Youngstown make dozens of heavy steel products. Dayton is famous for cash registers, also makes golf clubs, refrigerators and motors. Toledo, with a big factory production, is also the largest coal shipping point in the world. Springfield makes trucks and steel caskets. Columbus, the capital, turns out mining machinery, railroad cars, shoes and glass.

Ohio's thousands of factories almost overshadow its importance in two other basic industries—mining and agriculture.

The state ranks fifth in coal, thirteenth in oil, fourth in sand and gravel, high in clay products, and leads all the states in production of lime and limestone.

Its fertile soil, high in the middle and sloping off toward Lake Erie on the north, the Ohio River on the south, stands fourth in soy beans, sixth in corn, sixth in wheat, high in grapes, eleventh in tobacco. Ohio is fifth in egg production and its dairying and livestock feeding are extensive enough to place the state about seventh in all farm cash income.

The first Europeans explored the state about 1650. Five Presidents have been elected from Ohio, and two others elected from other states were born in Ohio. In recent years Ohio has fluctuated between Democrats and Republicans.

Oklahoma

Oklahoma, with rolling plains spread westward from the wooded Ozark Mountains, stands fourth in U. S. production of oil, fourth in growing of wheat, first in mining of zinc. Tulsa, one of the world's wealthiest per capita cities, is a great oil center where most of the major firms maintain offices. Oklahoma City, the capital, pumps oil wells just a few steps outside its business district. Oil refining, zinc smelting, meat packing and flour milling are chief factory industries. The development of glass products is ever increasing. The state leads in growing broom corn, and grows oats, corn, cotton, sorghums and potatoes.

Francisco Coronado, Spanish explorer, first saw Oklahoma in 1541 while searching for the mythical city of Quivira. In 1834 white settlers were barred when most of Oklahoma was set aside as Indian ter-

ritory. At noon on April 22, 1889, the major part was opened to homesteaders and in one day 50,000 persons swarmed in. The term "Sooners" was born. It applied to the greedy who had sneaked in sooner than the law allowed. Today Oklahoma has the biggest U. S. Indian population, more than 100,000, and some of them are wealthy from oil discoveries on their land. One payment to the Osage Indians totaled \$22,000,000 in 1926. One of the state's natural wonders is the Great Salt Plain in the northwest, level as a table top, the residue from an ancient inland sea. Oklahoma is one of the three states which forbid the sale of hard liquor. In politics it is usually Democratic.

Oregon

While it ranks second to Washington in the cutting of lumber, Oregon could easily be first. The state has the greatest U. S. reserve of standing timber—about 438 billion board feet, which is 20 percent of the nation's total. Oregon stands near the top in the raising of a great variety of fruit, and its salmon fishing industry, centered at Astoria at the mouth of the Columbia River, is one of the world's largest. The state leads in growing hops, also raises nuts, wheat, hay, oats and potatoes. Oregon has much undeveloped mineral wealth, including gold, silver, copper, lead, iron and platinum. Mercury, chromite and antimony are mined in quantity.

Oregon's coast is lush and green with very heavy rainfall. In the southeast, far back of the Coast and Cascade Mountain ranges, it runs to near-desert land. Portland, a hundred miles up the Columbia River, is the fourteenth busiest U. S. seaport, the third most active Pacific port. Besides being a big shipper of wheat and lumber, Portland has factories which account for a third of the state's manufacturing, including lumber and food products, flour and machinery. Salem, the capital, is an important canner and maker of wood products.

Francis Drake, the Englishman, or the early Spanish sea captains, may have looked on Oregon in the early sixteenth century. Bruno Heceta, a Spaniard, in 1775, was the first known to have landed there. Oregon early attracted substantial settlers and was the first of the far-Western states to be settled without the help of a major gold rush. Republicans have usually predominated in Oregon politics.

Pennsylvania

From the steel mills of Pittsburgh through the mid-state coal mines and oil wells to the shipyards and factories of Philadelphia, Pennsylvania bristles with

heavy industry that has made it an American bulwark since early Colonial days. The state is second in manufacturing, second in all coal mining, first in anthracite coal mining, ninth in oil production and ships a vast export volume out of Philadelphia, the second busiest U. S. seaport.

Iron and steel are the state's trademarks. Before 1692 Pennsylvania was making iron and by 1727 it was exporting iron to England. Today about half of U. S. iron and steel is made in the Pittsburgh area where the saying runs, "Times is tough when the sky ain't smoky." Pittsburgh also is a big maker of electrical machinery. Philadelphia plants turn out machinery and textiles, and products of oil, coal, food and chemicals. Harrisburg, the capital, makes boilers, engines, knit goods and iron, steel and tobacco products. Scranton is the second largest U. S. silk manufacturing center. Wilkes-Barre makes locomotives, wire, machinery, and iron and steel and textile products. Allentown turns out trucks, buses, machinery, cigars, textiles and is a big cement producer. Erie, the fourteenth Great Lakes port, makes locomotives, blast furnaces and other heavy products, and Reading is one of the nation's biggest silk hosiery and underwear makers.

Traversed by the Appalachians through its central part from northeast to southwest, Pennsylvania contains virtually all the U. S. anthracite (hard coal) deposits. These lie in the northeast, around Scranton and Wilkes-Barre. Aside from coal and oil, Pennsylvania is the U. S. leader in producing cement, coke, cobalt and lead and zinc pigments. It ranks high in stone, clay, peat and natural gas.

As a farmer, the state stands first in growing buckwheat and seventh in tobacco. It is high in apples and potatoes, and also raises corn, wheat, oats, barley, hay and peaches.

Rich in historical lore, Pennsylvania was founded as a colony in 1681 by William Penn, the Quaker. Benjamin Franklin became its most famous citizen. Philadelphia was the seat of the Federal government almost continuously from 1776 until 1800, and there the Declaration of Independence was signed, and the Constitution formulated. Valley Forge, of the Revolution, and Gettysburg, the turning-point battlefield of the Civil War, both are in Pennsylvania. In politics, the state usually is Republican.

Rhode Island

Little Rhode Island—it would fit into Texas 220 times—set the theme for its future in 1790 when Samuel Slater established the first cotton thread spinning mill in the nation at Pawtucket. Today Rhode Island has the greatest per capita

industrial output in the country, and the bulk of the products comes from the great textile mills of Pawtucket, Providence and Woonsocket. Tools and machine tools are other leading products and Providence, the capital, is one of the largest U. S. jewelry centers.

Rhode Island has the greatest density—nearly 700 persons per square mile as against the national average in 1940 of 44.2. More than nine-tenths of the people live in the cities. To the south, in the low, rounded hills of Rhode Island, dairying and truck farming are carried on despite the sterility of the boulder clay soil. Potatoes, corn, apples, oats and hay lead the crop list.

Roger Williams founded Providence, and subsequently Rhode Island, in 1636 after he had been banished from Massachusetts for non-conformance in religious doctrine. Newport is the site of the Naval War College and was long a showplace for the magnificent summer homes maintained by wealthy persons from New York. Republicans have held an edge in Rhode Island politics.

South Carolina

Once primarily agricultural, South Carolina has built so many big cotton textile mills that today the state's factories double the output of its farms in cash value. Greenville, the principal textile center, turns out 4,500 different cloth patterns. Columbia, the capital, and Spartanburg are humming cotton mill cities. Charleston, the largest city and busiest seaport, makes asbestos, wood, pulp and steel products. Many South Carolina communities make commercial fertilizer in volume.

Running from a sandy coastal belt to the Blue Ridge Mountains in the west, the state ranks fifth in growing cotton, fifth in tobacco, and twelfth in lumbering. Turpentine and resin are major products from its vast yellow pine forests. Only California and Georgia grow more peaches than South Carolina, which also raises corn, hay, oats, sweet potatoes and peanuts. Stone, clay, and sand and gravel are the principal mineral products.

Spaniards in the early sixteenth century were the first white men to see South Carolina. Under the English, North and South Carolina were one large colony until they split in 1729. Civil War hostilities started at Charleston when, on April 12 and 13, 1861, South Carolina men bombarded and captured Fort Sumter. Later in the same war, the Confederates operated in Charleston harbor the first submarine ever used in warfare. South Carolina is steadily Democratic in politics.

South Dakota

South Dakota offers a varied set of extremes. The Homestake Mine, at Lead, is the richest single U. S. gold mine. Until last year, South Dakota had the lowest paid U. S. governor. In the Black Hills is 7,242-foot Harney Peak, the highest spot east of the Rocky Mountains. Also in the Black Hills, at Mt. Rushmore, a gigantic national memorial is being sculptured from solid rock on a granite face 700 feet high which will feature the heads of Washington, Jefferson, Lincoln and Theodore Roosevelt. Armstrong County, an unorganized unit in South Dakota, has a population of forty-two—the smallest U. S. county population.

Seventy-five percent of the state's people are in agriculture or dependent industries. In a recent good year the crop value was \$245,000,000. In a recent bad year it was \$28,000,000. South Dakota is first in rye, third in barley, fifth in oats, seventh in corn, eighth in wheat. Cattle raising and dairying are strong industries. Pierre, the capital, and Sioux Falls, Aberdeen, Rapid City and Huron all are cattle shippers, meat packers, makers of butter, cheese and flour.

In the southwest are the desolate Bad Lands and the beautiful Black Hills. South Dakota's gold was discovered in 1874 by General Custer's men on Indian land in the Black Hills. When the gold-hungry whites swarmed in illegally, the Sioux took to the warpath and one result was the Custer massacre in 1876. Feldspar, bentonite and mica are other mining products. The French trader, Verendyre, first saw South Dakota in 1743 when he came down from Canada looking for a western ocean. In South Dakota politics, Republicans usually have their way.

Tennessee

While Tennessee is far down the list in U. S. industry, it won world prominence in 1945 for the single product of one factory—the atomic bomb that was a product of the Clinton Engineer Works at Oak Ridge in the Tennessee Valley and of plants in Washington and New Mexico.

Aside from that distinction, Tennessee is a predominantly agricultural state affected by the South's steady trend toward increased industrialization. It places seventh as a cotton grower, and thirteenth in corn. Other crops are wheat, oats, barley, hay, potatoes and peanuts. Lumbering is extensive. The state is tenth as a coal miner, also produces stone, zinc and cement.

The Tennessee Valley Authority, a system of big dams on the Tennessee River and its tributaries, has been of great bene-

fit to the state for flood control, cheap electric power, increased navigation and artificial lakes for recreation. Tennessee runs from the Great Smoky Mountains in the east down to tableland and then down to the Mississippi bottoms. One of its natural beauty spots is Fall Creek Falls, a 256-foot waterdrop, the highest east of the Rockies.

Memphis, the largest city, is the biggest U. S. inland cotton market, the biggest hardwood lumber market. Nashville, the capital, has diversified factories, is a leader in publication of religious periodicals and books. Knoxville has cotton mills. Chattanooga's 440 factories make 1,500 items from clothing to boilers. Hernando de Soto, Spanish explorer, first entered Tennessee in 1541. One of the highest battles of the Civil War—the Battle Above the Clouds—was fought in the state on Look-out Mountain. Tennessee is usually Democratic.

Texas

Big, sprawling, vigorous Texas is the richest political subdivision in the world, with the possible exception of the Russian Ukraine. The state leads the nation in production of oil, natural gas, cotton, beef cattle, helium, sulfur, sheep, wool, goats, onions and turkeys. Texas cotton—a third of the U. S. total and a seventh of the world total—is the most valuable crop grown inside a component state. Texas is the only state to top a billion dollars a year in mineral production. Aside from its "firsts," Texas ranks high in other items—second in grapefruit, third in eggs and oranges, fifth in pears, sixth in peaches, second in peanuts, seventh in sweet potatoes, ninth in lumbering. More than fifty crops are grown on a commercial scale, including corn, wheat, oats, sorghums, potatoes, rice, pecans and a long list of vegetables.

Most of the state's big production records stem from its size—one-twelfth of the nation. Its largest county, Brewster, is six times the size of Rhode Island, and the whole state is 220 times the area of Rhode Island. The climate ranges from a subtropical south to a temperate north where snow averages two feet in a winter. From Texline to Brownsville, or from El Paso to Beaumont is a greater distance than from New York to Chicago.

Mountainous in the west and running eastward through broken prairie land to the lowest area along the Gulf of Mexico, Texas was explored first in 1528 by Cabeza de Vaca, a shipwrecked Spaniard. Since then, the state has flown five flags—those of France, Spain, Mexico, the Texas Republic and the United States. Texas is the only state authorized by Congress to subdivide into five states any time it wishes.

With its huge cotton and oil exports, Texas has seven of the first thirty Gulf ports—Houston, Beaumont, Port Arthur, Texas City, Corpus Christi, Port Arkansas and Galveston. Houston, the largest city, makes chemicals, fertilizer, grain products and cement. Austin, the capital, makes brick and tile, food products and furniture. Fort Worth is the largest meat packer south of Kansas City, and the biggest grain market in the South. Dallas is one of the largest U. S. inland cotton markets, an oil refiner and a big maker of cotton gins. San Antonio, the site of the historic Alamo, makes iron, steel, cotton and tobacco products. Amarillo has the only U. S. helium plant. In all manufacturing, Texas ranks eleventh.

Texas is first in total railroad mileage, and over the Neches River at Port Arthur is the most elevated highway bridge in the world. In Pecos County is the deepest hole in the world—an oil well that goes down 15,279 feet. Texas is consistently Democratic in politics, though it broke from the Solid South to go Republican in the national election of 1928.

Utah

Utah, first in gold mining, and high in copper, silver and lead, was probably the last U. S. area to be fully explored. Not until early in this century did the world learn of the strange land in its southeast corner—a place of deep twisting canyons and weird colored rock formations. There, in an area partly inaccessible even by pack train, are the largest natural bridges in the world. Millions of years of geological history can be read in the canyon walls.

The Mormons under Brigham Young began to settle Utah in 1847. Six times in the next forty years they applied for statehood but Congress kept the door closed until 1896 when the Mormons promised to abandon polygamy. Spanish explorers in 1540 were probably the first whites to see Utah.

The state's crops require irrigation. Sugar beets rank first, then potatoes, hay, onions and wheat. There is an extensive livestock industry. Salt Lake City, the capital, the site of the Mormon Temple and Tabernacle, refines ore, sugar beets and oil. Geneva and Provo are centers of steel making. Ogden and Logan process sugar beets and operate canneries.

Great Salt Lake, lying north central in mountainous Utah, has long been a world wonder. It covers 1,500 square miles, is 4,218 feet above sea level, has no known outlet, and a salt content about six times that of the ocean. In politics, Utah switches between the Democratic and Republican parties.

Vermont

Vermont, the only New England state without a seacoast, is the U. S. leader in producing maple syrup and asbestos, sometimes the leader in marble and granite. In ratio to population, it keeps more dairy cows than any other state. Vermont's soil is largely devoted to truck farming and fruit growing—its rugged area dominated by the Green Mountains precludes any extensive farming. That same quality, however, along with a bracing dry climate, makes the state a great favorite both as a summer resort and as a center of winter sports.

Montpelier, the capital, and Rutland are in the granite and marble country. Some of the Rutland quarries, producing marble known all over the nation, are 300 feet below the surface. Burlington, the largest city, makes lumber products, venetian blinds, ovens and woollens. Bennington turns out knit goods, paper and furniture, and has the world's tallest battle monument, 302 feet high. The city was the base in the Revolution for Ethan Allen's Green Mountain Boys and the monument commemorates a British defeat in 1777 actually administered a few miles to the west in New York.

Samuel de Champlain, French explorer, saw Vermont first in 1609. For some years New York and Massachusetts argued over possession of the colony, and then it became an independent republic, lasting for fourteen years before joining the Union in 1791, the first after the original thirteen states. Vermont has been Republican since 1856. Only Georgia, on the Democratic side, ties that record.

Virginia

Richmond, the capital of historic Virginia, makes more cigarettes than any other city in the world—a third of the U. S. total. Both the state and its capital are richly bound up with American history. Jamestown, founded in 1607, was the first permanent English settlement in North America. Slavery was introduced to the continent in Virginia in 1619. The Revolution and the Civil War—with Richmond the Confederate capital—both ended in Virginia, and the state supplied seven of the first twelve Presidents.

Virginia steps up to the west from a low coastal belt to the Piedmont Plateau, to the Blue Ridge Mountains, to the Appalachians. Tucked in its western mountains is the Shenandoah Valley, one of the richest U. S. farming areas. The state ranks third in tobacco and apples, also raises cotton, wheat, oats, potatoes, barley and sweet potatoes. It is fifth in growing peanuts and feeds a big part of the crop to

hogs which provide world-famous hams. In commercial fishing, Virginia stands sixth; in lumbering, tenth. There is a substantial livestock industry in southwest Virginia.

Norfolk, together with Portsmouth and Newport News, makes up the Port of Hampton Roads—the sixth busiest U. S. seaport, one that can handle a thousand ships with ease. Seventy percent of U. S. tobacco exports leave through this port. Newport News is a big shipbuilder. Iron and cotton products are important in Roanoke. Furniture, chemicals and textiles are other major products of Virginia factories. In politics, Virginia is predominantly Democratic, though it broke away to vote Republican in the national election of 1928.

Washington

Washington, in the northwest corner of the nation, has led the country in lumber production every year but one since 1905. Its rugged surface, divided north and south by the Cascade and Coast Mountain ranges, is rich in stands of Douglas fir, yellow and white pine, spruce, larch and cedar. Washington's other famous "first" is apples—it grows three to five times as many as the nearest competitor and ships them all over the nation. The state is fifth in wheat, high in all fruit, and grows barley, oats, corn, potatoes, hops and truck vegetables.

Washington ranges from a warm coast, rich in vegetation and soothed by the Japanese current, to near-desert land in the east. Grand Coulee Dam, built on the Columbia River for power and irrigation, is the world's largest concrete dam and creates a precious reservoir 151 miles long. Coal is the state's leading mineral, but the potential in gold, silver, zinc, lead and mercury is believed to be great.

The state has flourishing ports on Puget Sound—Olympia, the capital; Seattle, the largest city; and Tacoma and Everett. Spokane in the Columbia basin, the capital of "The Inland Empire," is a big power center for mining and irrigation. Food and lumber products and a wide variety of goods flow from Washington factories. The Hanford Engineer Works, north of Pasco, Wash., was set up as the world's first full-scale plant for making atomic bombs. Bruno Hecata, a Spanish sea captain, in 1775, was the first white man known to have landed in Washington. In politics, the state fluctuates between Democrats and Republicans.

West Virginia

Mountainous West Virginia, the fortieth state in size, is the coal mining leader of the nation. In some years it digs 25 percent of all U. S. bituminous. Geologists

believe that if all other U. S. coal mines shut down, West Virginia alone could supply the country for 250 years. The state also ranks high in natural gas, oil, quarry products and hardwood lumber.

In 1671 Captain Thomas Batts and a party from eastern Virginia probably were the first whites to see the area. Until 1861 West Virginia was merely the north and west part of Virginia but its people created a new distinct state after refusing to secede in the Civil War. Wheat, corn, oats, hay, tobacco and fruit are leading crops. Charleston, the capital, makes glass, furniture, chemicals and steel. Huntington, the largest city, makes glass and textiles, and rolls nickel. Wheeling makes steel, tin plate, glass and medicine.

Like many mountain states, West Virginia has an equable climate, without extremes. White Sulphur Springs, in Greenbrier County, is a famous health resort. Mountain streams give West Virginia one of the highest U. S. water power potentials. In politics, Republicans have won in West Virginia a little over half the time.

Wisconsin

Wisconsin led the country in lumbering until its great pine and hemlock forests were tragically exhausted forty years ago, and then it turned to farm and factory. Today Wisconsin has more dairy cattle than any other state. In some years it makes half of the country's cheese, a third of the milk products. In total farm cash income, Wisconsin is only a few places from the top. The climate is so benign that serious crop failure is virtually unknown, and the state's many lakes make it a great summer resort favorite. Among Wisconsin's records are: first in canning peas, second in growing cranberries and hemp, fourth in oats, fifth in rye, eighth in tobacco.

Humming factories in a score of cities give Wisconsin tenth place in manufacturing. Superior, on Lake Superior, near the state's iron ore ranges, shares with Duluth, Minn., the rank of second busiest port in the nation, its tonnage exceeded only by New York. Six other Great Lakes ports—Milwaukee, Green Bay, Racine, Kenosha, Sheboygan and Ashland—are industrial centers making paper, autos, beer, machinery, furniture, clothing and scores of other products. Madison, the capital, has the only U. S. forest products laboratory.

Jean Nicolet, French explorer, seeking a northwest passage in 1634, was the first explorer to see Wisconsin. Germans and Scandinavians dominated its settlement. In 1934 it passed the first state unemployment compensation act. Republicans hold the edge in Wisconsin politics, where there long has been a strong Progressive movement.

Wyoming

Wealthy in wool, cattle, oil and coal, Wyoming was first in U. S. history to assure woman's place in politics. Its first territorial legislature in 1869 gave women the vote in all elections. And Mrs. Nellie Tayloe Ross, who held office in 1925-27, was the first U. S. woman governor.

One of the world's largest sub-bituminous coal fields lies near Sheridan. One of the largest oil refining centers is at Casper, hard by the Teapot Dome, Salt Creek and Big Muddy oil fields. Cheyenne is famous for its annual "Frontier Days" celebration, which draws patrons from Canada to Texas for the rodeo and other exhibitions of western life. Nearly every railroad town in the state is a shipper of cattle, sheep and wool.

Wyoming is second to Colorado in high, mean elevation, but irrigation in its plains areas favors the growing of corn, wheat, oats, fruits, seed potatoes. Wyoming sugar beets are the richest in the nation. Much of the state's mineral wealth is still undeveloped.

Yellowstone Park in the northwest corner is one of the greatest U. S. tourist attractions. Big game hunting is good in many parts of the state. Unless the early Spaniards saw Wyoming, trappers about 1800 were probably the first white men there. The building of the Union Pacific Railroad in the 1860's gave settlement its start. Wyoming political control fluctuates between Democrats and Republicans.

District of Columbia (Washington, D. C.)

The District of Columbia—identical with the City of Washington—is the capital of the United States and the first carefully planned capital in the world. In area it is sixty-nine and a quarter square miles, carved out of Maryland on the north bank of the Potomac, a hundred miles up from Chesapeake Bay. In appearance, it is a symmetrical and generally beautiful city with more miles of tree shaded streets than any other community in the world, possibly excepting Buenos Aires. It has mild winters, often oppressively hot summers, and is almost exclusively devoted to government. Washington's manufacturing, for example, is only for local consumption.

District of Columbia history began in 1790 when Congress directed selection of a new capital site, 10 miles square, along the Potomac. When the site was determined, it included thirty and three-quarters square miles on the Virginia side of the river, but Congress returned that area to Virginia in 1846. Major Pierre L'Enfant, a young French engineer who had fought

in the Revolution, was commissioned by President Washington to plan the new capital, and by 1800 enough buildings were up and enough streets were laid out for the government to move in. In 1814—during the War of 1812—a British force marching overland from the Potomac's mouth burned the Capitol, fired the President's home and damaged or ruined other government buildings. It was from the white paint applied to cover fire damage that the President's home came to be called the White House.

Washington's skyline is dominated by the Capitol and the Washington Monument, a plain obelisk towering 555 feet. The Capitol, of Virginia sandstone and Massachusetts marble, overlooks the Potomac from a hill eighty-eight feet high. The top of its great dome is 288 feet above the ground. While the Capitol is not the city's center, it is the key to the street address system. Lines running through it north-south and east-west divide Washington into its four zones, northwest, southeast, etc.

During World War II Washington was one of the most crowded cities in the world. From a population of 663,091 in 1940, it shot to over a million at the peak in 1943 and its many suburbs for miles around were choked with government workers brought in for the war's office work. By the middle of 1945, the population had dropped back to 926,000.

Major L'Enfant designed a city of rectangular blocks, created by streets intersecting at right angles, and generally designated by numbers and letters. In addition, diagonal arteries fan out from various centers, making many parks and plazas suitable for statues and monuments. Pennsylvania Avenue—the radial lines are, generally, named for the states—is probably the most famous of them, with the White House at No. 1600 and the Capitol also on its route.

Washington has many world-famous buildings and monuments—the Library of Congress, Jefferson Memorial, Lincoln Memorial, Grant Memorial, Tomb of the Unknown Soldier, Treasury Building, Ford's Theater on Tenth Street in which Abraham Lincoln was shot, the Peterson House at No. 453 Tenth Street in which Lincoln died, National Gallery of Art, the new majestic government buildings on Constitution Avenue, and scores of others.

Washington is administered by three commissioners appointed by the President. Two of them must be residents of the District of Columbia, and the third must be a U. S. Army engineer.

Alaska

Alaska, the biggest, coldest and wildest of U. S. possessions, was called "Seward's

Folly" in 1867, when Secretary of State William H. Seward arranged for its purchase from Russia for \$7,200,000. Since then Alaska has paid for itself scores of times over in fish, furs, and minerals, and annual exports today run not far under \$75,000,000. Its wildlife resources alone are valued at over \$100,000,000.

Nearly a fifth of the United States in size, Alaska is a fat, blunt peninsula with two long necks. At the southwest, the Aleutian Islands run out 1,200 miles to the International Date Line. At the southeast, Alaska's panhandle runs several hundred miles down the Canadian Pacific Coast. There are east and west mountain ranges with a vast plateau in the middle, and a great plain extending to the Arctic Ocean on the north. Mt. McKinley, in the south central part, is 20,300 feet high, the tallest peak in North America.

Canned salmon—nearly 5 million cases a year—is Alaska's biggest product. Ketchikan, population about 5,000, probably cans more salmon than any other place in the world. It mines about \$2,000,000 a year in gold, supplies most of U. S. tin, and also turns out copper, platinum, coal, oil, gypsum, limestone, and marble. At least seventeen other minerals exist, some of them produced commercially.

The Pribilof Islands, in the Bering Sea, are world famous as the breeding ground of the Alaska fur seal. Careful government control of the annual take has increased the seal herd from 215,000 in 1912 to 2,021,000 in 1939. Beaver, muskrat, otter, mink, and other furs also are produced in the fur industry that totals several million dollars a year. Alaska, with its wild interior, still partly unexplored, is a hunter's paradise. Big game includes the grizzly, polar and Kodiak bear, moose, mountain sheep and caribou.

Vitus Bering, a Dane working for the Russians, discovered Alaska in 1741. Until the U. S. purchase, it was known as Russian America. Sitka was the capital until 1906. In 1912 Alaska became a territory with Juneau as capital. With only one person for every eight square miles, Alaska is by far the most thinly settled of U. S. lands. Point Barrow, the northernmost occupied spot in North America, is icebound ten months of the year. Inland winter temperatures go down to 60° below zero, but the coast, bathed by the Japanese current, ranges between zero and 80° F. A small amount of farming is squeezed into the short summers.

Alaska is administered by a governor appointed by the President and a locally-elected two-house legislature. Its delegate to Washington has a voice but not a vote in the House of Representatives.

During World War II the Japanese occupied the tip of the Aleutians, but U. S.

forces retook the islands in 1943. Gold mining was banned in Alaska during the war, but in 1946 the largest low-grade-ore gold mine in the world, the Alaska Juneau Mine, was preparing to open.

Alaska has magnificent glaciers and active volcanoes. In June, 1912, the whole top blew off Mt. Katmai in the Aleutian range. Of Alaska's 1939 population of 72,524, about 30,000 were Aleuts, Eskimos, and Indians and most of the rest were whites.

Canal Zone

Fifty miles long and ten miles wide, with the Panama Canal crossing its middle, the Canal Zone is a protective belt of U. S. territory guarding the vital water link between the Atlantic and the Pacific Oceans. Its land area of 362 square miles is smaller than New York City. Its 1940 population was 51,287, but during World War II many thousands of Army and Navy personnel poured into the zone to man its approaches against enemy attack and to guard its three sets of locks against sabotage.

The Canal Zone, bisecting the Republic of Panamá at its lowest and narrowest point, was granted to the United States by Panamá on Feb. 26, 1904, for \$10,000,000 outright, an annual payment of \$250,000, later increased to \$430,000. The canal was opened ten years later. No private individuals are permitted to own land in the Canal Zone, which is administered by a governor appointed by the President. Cristobal is the port at the Caribbean end, and Balboa at the Pacific end.

The Panama Canal was envisioned nearly 400 years before it was built. King Charles V of Spain ordered a survey made in 1534, after mariners found no access to the Pacific. Many routes and many schemes, some utterly fantastic, were proposed during the next three centuries. In 1879 the French obtained canal rights across Panamá, then part of Colombia. After twenty-five years of fighting disease and working with inadequate tools, the French gave up. The United States interested in a canal since 1825, bought the French rights for \$40,000,000 and set to work. As a result of the transaction, Panamá, with U. S. backing, won independence from Colombia.

The canal collected more than \$500,000,000 in tolls in its first twenty years. Only U. S. Navy craft pass through free. The largest vessels using the canal, foreign battleships, pay over \$20,000 for the ocean-to-ocean transit—a bargain since it would cost them more than that in time and money to go around South America.

High water in Gatun Lake is eighty-five feet above sea level. From Caribbean to Pacific, the locks which make this climb and descent are Gatun Locks, Pedro Miguel Locks and Miraflores Locks, which have a

total of six steps or levels. The locks are 1,000 feet long and 110 feet wide. Gatun Dam is the third largest earth dam in the world, and Gatun Lake, which it creates, is the world's second largest artificial body of water. Because of the curve of the isthmus, the Pacific end of the canal is twenty-seven miles east of the Caribbean end.

The canal's biggest peacetime year was 1929, when it averaged seventeen ships a day and collected a total toll of \$27,111,125. In 1939 Congress authorized a \$277,000,000 construction of new locks parallel to the present ones, but 1,200 feet long and 140 feet wide to permit the handling of vessels now barred because of their size. Construction work, begun in 1940, was halted by the war.

Hawaii

Hawaii, a volcanic-coral island group about three times the size of Delaware, grows 90 percent of the world's pineapple but it won a far sharper fame on Dec. 7, 1941, when the Japanese attacked Pearl Harbor, the U. S. Navy's greatest base, near Honolulu, the Hawaiian capital. Throughout World War II, virtually all of the territory's normal life was subordinated to its role as the military and naval springboard for America's war in the Pacific.

Hawaii is 2,394 miles southwest of San Francisco. The group is a 390-mile chain of islets and eight main islands—Hawaii, Kahoolawe, Maui, Lanai, Molokai, Oahu, Kauai, and Niihau. Largest in size but youngest geologically is Hawaii. Its highest peak, Mauna Kea, rises to 13,784 feet and is, in a sense, the world's highest mountain since it springs from an ocean floor 18,000 feet below sea level. Kilauea, on Hawaii, is the world's largest active volcano. The islands have no snakes and their only native mammal is a small bat, but there are more than a hundred species of birds.

Hawaii's temperature seldom exceeds the extremes of 56 and 88 degrees, and the soil is fertile for all sorts of tropical and sub-tropical fruits and vegetables. The islands are one of the world's largest producers of cane sugar, and also grow coffee, rice, cotton, bananas, nuts, and potatoes. Much of the crop land is irrigated. Some livestock is raised. The main mineral products are building stone, lime and salt. Aside from food processing, Hawaiian manufacturing is limited to small iron works and cement making.

In normal times, the tourist business is Hawaii's third biggest source of income. Among its world-famous ingredients are Waikiki Beach, distinctive native music, surf-board riding, a native dance called hula-hula and the flower garlands known as leis.

Today the most highly organized of

U. S. territories, Hawaii was named the Sandwich Islands in 1778 by its discoverer, Captain James Cook, an Englishman. It was ruled by native monarchs and proclaimed a republic in 1894 after Queen Liliuokalani was driven from the throne. It ceded itself to the United States in 1898 and became a territory in 1900. Inter-marriage has reduced the pure Hawaiian race to about 14,000 persons, with Caucasians and Japanese the largest elements among the territory's 1945 population of 502,122. Hawaii's Governor is appointed by the President to a four-year term and there is a locally-elected two-house legislature. Hawaii's delegate to the House of Representatives in Washington has floor privileges but no vote. Legislation is now pending in Congress for the admission of Hawaii as the 49th state.

The modern and beautiful city of Honolulu is, technically, the most spread-out city in the world. Part of it, for administrative purpose, is Palmyra, a coral atoll, 960 miles to the south. Hilo, Kahului, Ahukini and Port Allen are minor island ports. In a normal year Hawaii exports over 100 million dollars worth of sugar, pineapple, canned tuna, fiber board and other products, while importing about 135 million dollars worth of manufactured goods.

Puerto Rico

Puerto Rico, a 95-mile-long U. S. dependency at the northeast head of the Caribbean Sea, is a big cane sugar and rum producer and a humanity-packed island with a population density exceeded in U. S. records only by Rhode Island and New Jersey. Its density rate of about 550 persons per square mile has forced not only the cultivation of some of its interior mountain slope nearly to the summits, but also legalization, in 1937, of publicity for birth control.

Sugar, rum, needlework, cigars, citrus fruits, coconuts, coffee, molasses, pineapples, rugs, rope and buttons are the chief exports of the 35-mile-wide island which was discovered by Columbus and conquered for Spain in 1509 by Ponce de León. The United States seized Puerto Rico in 1898 in the Spanish-American War. The island is administered by a Governor and by a locally-elected Congress. As the result of a bill signed Aug. 5, 1947, by President Truman, Puerto Rico may now choose its governor by popular election, the first time any American possession or territory has been given such authority. There is also a Resident Commissioner in Washington with a voice in the House of Representatives, but no vote. Puerto Ricans have long agitated for a change in their political status, some wanting merely more autonomy and some demanding complete independence.

About 75 percent of the population is white and 25 percent Negro. The Roman Catholic religion is predominant. While Spanish is the popular language, English is spoken by most residents and especially by the younger generations, which have benefited from probably the best school system in Latin America. San Juan, Ponce and Mayaguez are the leading cities. San Juan, the capital and largest city, has a fine harbor, overlooked by Morro Castle and San Cristóbal, the ancient forts built by the Spanish to guard the port.

Virgin Islands

The Virgin Islands, a U. S. dependency east of Puerto Rico, are notable for making rum and entertaining tourists. They consist of about fifty islets and three main islands—St. Thomas, St. Croix, and St. John—with an area of 133 square miles. The hilltops and sandy beaches, today favored winter tourist spots, once were hangouts of pirates.

Columbus discovered the group in 1493 and named them for St. Ursula and the Eleven Thousand Virgins. The first recorded settlement was on St. Croix in 1621. The Danes took over the islands in 1671. The United States bought them from Denmark for \$25,000,000 in 1917.

The Virgin Islands' population has declined from 43,178 in 1835 to 24,889 in 1940. About 70 percent of the population today is Negro. Charlotte Amalie, the capital, on St. Thomas, was named for a Danish princess. St. Croix grows most of the cane sugar that goes into rum, while St. Thomas also makes bay rum. There is limited farming, fishing and cattle raising. Vegetables, citrus fruits, and coconuts are raised. Virgin Islanders have U. S. citizenship and are ruled by a Governor appointed by the President and municipal councils elected locally. English is the prevailing language.

Guam

A volcanic island about the area of Chicago, Guam was the first U. S. Pacific outpost to fall to the Japanese in 1941. Thirty miles in length, from four to eight miles in width, the island lies 1,500 miles east of the Philippines, 5,100 miles west by south of San Francisco. Its native inhabitants are about 23,000 Chamorros, far outnumbered by American military and civilian personnel quartered on the island.

Magellan discovered Guam in 1521. The first Spanish missionaries landed in 1668 and many of the priests and their soldier escorts met violent death in clashes with the natives. By 1710, war and pestilence had cut the native population to 3,678. The United States acquired Guam in the Spanish-American War and put it under Navy Department administration. The Japanese

had little trouble seizing Guam on Dec. 12, 1941, and held it until U. S. troops stormed back in July, 1944.

Guam's exports, worth \$84,278 in 1941, consist almost entirely of copra (dried coconut meat) and coconut oil. For local consumption, the Guamians grow bananas, pineapple, corn, alligator pears, sweet potatoes and many fruits.

Agaña, the capital, with about 12,000 normal population, was a modern little city with all conveniences until it was virtually wrecked in the 1944 fighting. English is the official language but many natives cling to the ancient Chamorro, long since corrupted by borrowed words and constructions. The U. S. government provides good schools under native teachers, and also teaches many crafts ranging from carpentry to cooking.

Two-thirds of Guam's annual sixty-nine inches of rain falls in July and September. The temperature ranges from 70 to 91 degrees, with May and June the hottest months. Occasional severe typhoons ruin crops and flatten huts. Guamians, whose island of 206 square miles is divided into fifteen municipalities, are U. S. nationals but not citizens.

American Samoa

American Samoa, a group of seven main volcanic or coral islands in the South Pacific, became U. S.-owned in piecemeal fashion between 1900 and 1929 when Congress accepted cession of them by their native chiefs. This trend had begun in 1872 when the port of Pago Pago on Tutuila Island, the largest of the group, was ceded to the United States for a Naval and coal-
ing station.

Tutuila is eighteen miles long, with maximum width of six miles, and is largely mountainous. Pago Pago, the capital, is 4,610 miles from San Francisco. The total area of the group is seventy-six square miles, a little larger than Cincinnati, and the 1940 population was 12,908. The climate is tropical with a heavy rainy season from December to March. American Samoa exports annually about 1,100 tons of copra (dried coconut meat) and also taro, yams, breadfruit, pineapples, oranges and bananas. The greatest source of native income is from the making of floor and table mats and hula skirts.

The officer commanding the Samoan Naval station administers the islands, under a system extending jurisdiction down to local native chiefs. The natives, Polynesians of a high type, are on the increase because foreigners are forbidden to buy their land. They read and write and are Christians of various denominations. The islands have thirty-six public schools with about 3,000 enrollment, and six private schools under missionaries.

Other American Pacific Islands

The insular possessions of the United States in the Pacific Ocean are tiny sand or coral isles and islets. In World War II, they became strategically important almost overnight in our defense against the Japa-

nese, and later in the offense. Two of them—Wake and Midway—have become famous names in American military and naval history. Many of them are presently the subject of controversy regarding their status.

NON-SELF-GOVERNING TERRITORIES

MIDWAY ISLAND GROUP—1,200 miles northwest of Hawaii; discovered in 1859 and formally declared a U. S. possession in 1867. The total group (Sand Island, Eastern Island, etc.) comprises an area of 28 square miles.

WAKE ISLAND—consists of islets of Wake, Peale and Wilkes; discovered by British in 1796; annexed by U. S. in 1898. Area of 4 square miles and is 2,130 miles due west of Hawaii.

AMERICAN SAMOA (Eastern)—6 islands and 1 islet (Tutuila, Olosega, Tau, Aunuu, Ofu and Rose); acquired by U. S. in 1899 and ratified in 1900.

BAKER AND HOWLAND ISLANDS—coral atolls near the crossing of the Equator and the International Date Line; 1,880 miles from Hawaii. Discovered in mid-19th century.

JARVIS ISLAND—1,150 miles east of Baker and Howland Islands; slightly below the Equator.

CANTON AND ENDERBURY ISLANDS—Canton is about 1,850 miles southwest of Hawaii and Enderbury lies 32 miles southeast of Canton. U. S. and Britain disputed about their ownership and agreed on a joint plan of operation on Aug. 11, 1938.

U. S. TRUSTEESHIPS

CAROLINE ISLANDS—divided into 4 administrative districts, Palau, Yap, Truk and Ponape; seat of administration is at Palau, whose chief island is Peleliu.

THE MARIANAS—discovered by Magellan in 1521; named in 1668 to honor Maria Anna of Austria. GUAM is the largest

island in this group of which others are Saipan, Rota, Tinian and Assumption.

MARSHALL ISLANDS—the seat of the U. S. experiments with the atomic bomb. The administrative center is at Jaluit and other islands in the chain are Elizabeth, Jabwat, Bikini and Eniwetok.

Trusteeship Agreement for Former Japanese Mandated Islands

Adopted at the 134th meeting of the Security Council of the United Nations, April 2, 1947, and approved by the Congress of the United States on July 18, 1947.

* * * * *

Abstract

* * * * *

Whereas Article 75 of the Charter of the United Nations provides for the establishment of an international trusteeship system for the administration and supervision of such territories as may be placed thereunder by subsequent agreements; and

Whereas under Article 77 of the said Charter the trusteeship system may be applied to territories now held under mandate; and

Whereas on 17 December 1920 the Council of the League of Nations confirmed a mandate for the former German islands north of the equator to Japan, to be administered in accordance with Article 22 of the Covenant of the League of Nations; and

Whereas Japan, as a result of the Second World War, has ceased to exercise any authority in these islands;

Now, therefore, the Security Council of the United Nations, having satisfied itself that the relevant articles of the Charter have been complied with, hereby resolves to approve the following terms of trusteeship for the Pacific Islands formerly under mandate to Japan.

Article I

The territory of the Pacific Islands, consisting of the islands formerly held by Japan under mandate in accordance with Article 22 of the Covenant of the League of Nations, is hereby designated as a strategic area and placed under the trusteeship system established in the Charter of the United Nations. The Territory of the Pacific Islands is hereinafter referred to as the trust territory.

Article II

The United States of America is designated as the administering authority of the trust territory.

Lincoln's Gettysburg Address

The Battle of Gettysburg, one of the most noted battles of the Civil War, was fought on July 1, 2, and 3, 1863. On November 19, 1863, the field was dedicated as a national cemetery by President Lincoln in a two-minute speech that was to become immortal. At the time of its de-

livery the speech was relegated to the inside pages of the papers, while a two-hour address by Edward Everett, the leading orator of the time, caught the headlines. The following is the text of the address revised by President Lincoln from his own notes:

FOURSCORE and seven years ago our fathers brought forth on this continent a new nation conceived in liberty and dedicated to the proposition that all men are created equal. Now we are engaged in a great civil war testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battlefield of that war. We have come to dedicate a portion of that field as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this. But, in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us the living rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain, that this nation under God shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth.

The Monroe Doctrine

The Monroe Doctrine was announced in President James Monroe's message to Congress, during his second term on December 2, 1823 in part as follows:

"In the discussions to which this interest has given rise, and in the arrangements by which they may terminate, the occasion has been deemed proper for asserting as a principle in which rights and interests of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European power. . . . We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. With the existing colonies or dependencies of any European power we have not interfered and shall not interfere. But with the governments who have declared their independence and maintain it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them or controlling in any other manner their destiny by any European power in any other light than as the manifestation of an unfriendly disposition toward the United States."

Minority Presidents

Source: Congressional Directory.

Nine presidents of the United States have been elected with a popular vote totaling less than fifty percent of the total vote cast. In only two cases, however, has the candidate receiving the largest popular vote failed to garner the majority in the Electoral College—Samuel J. Tilden in 1876 and Grover Cleveland in 1888. The "minority" presidents follow:

Year	President	Elec- toral	Popular vote
		Pct.	Pct.
1856	James A. Buchanan (D).....	58.7	45.3
1860	Abraham Lincoln (R).....	59.4	39.9
1876	Rutherford B. Hayes (R).....	50.1	47.9
1880	James A. Garfield (R).....	57.9	48.3
1884	Grover Cleveland (D).....	54.6	48.8
1888	Benjamin Harrison (R).....	58.1	47.8
1892	Grover Cleveland (D).....	62.4	46.0
1912	Woodrow Wilson (D).....	81.9	41.8
1916	Woodrow Wilson (D).....	52.1	46.0

Oath of Supreme Court Justice

"I do solemnly swear that I will administer justice without respect to persons, and do equal right to the poor and to the rich; and that I will faithfully discharge all the duties incumbent on me as Judge, according to the best of my abilities and understanding, agreeably to the Constitution and the laws of the United States."

The White House

The White House, the official residence of the President, is located on Pennsylvania Avenue in Washington, D. C. The site covering about 16 acres was selected by President Washington and Pierre Charles L'Enfant, and the architect was James Hoban. The design of the mansion is said to have been suggested by the Duke of Leinster's Palace in Ireland. The cornerstone was laid Oct. 13, 1792, and the first residents were President and Mrs. John Adams in Nov., 1800. The building was fired by the British in 1814, and the sandstone exterior was painted white in 1815.

The rooms for public functions are on

the first floor; on the second are the President's apartments. The most celebrated public room is the East Room, where formal receptions take place. Other public rooms are the Red Room, the Green Room, and the Blue Room. The State Dining Room is used for formal dinners.

The Executive Office, a three-story structure at the west end of the West Terrace, was added to the original building in 1902 to accommodate the President's office staff, and several additions have since been made. In 1942, a three-story building was erected on the East Terrace, and now serves as the White House main entrance.

Wives of the Presidents of the United States

President	Wife's name	Year and place of birth	Married	Died	Sons	Daughters

NATIONAL MILITARY ESTABLISHMENT

UNITED STATES SERVICE ACADEMIES

THE UNITED STATES MILITARY ACADEMY

Source: U. S. Military Academy.

The U. S. Military Academy opened on July, 1802 with less than a dozen cadets. In 1812, 250 cadets were appointed, and a regular curriculum was established.

The present 2500 cadets include:

- 4 from each Congressional district
- 8 from each State at large
- 4 each from Hawaii and Alaska
- 6 from the District of Columbia
- 4 natives from Puerto Rico
- 2 from the Panama Canal Zone
- 3 recommended by the Vice President
- 40 graduates of "honor military schools"
- 40 sons of veterans of World Wars I or II who died as a result of war service
- 89 sons of members of the Regular Army, Navy or Marine Corps
- 80 from the Regular Army and National Guard
- 4 from the Republic of the Philippines

All appointments are made by the President upon recommendation of the respective nominating authorities.

Candidates must be between the ages of 17 and 22, unmarried, and able to meet the mental, physical and physical aptitude requirements. They may satisfy the educational requirements by taking the regular entrance examinations, by presenting acceptable secondary school certificates and passing special examinations in English and mathematics, or by presenting certificates showing completion of at least one semester of acceptable college work.

A cadet receives \$936 for each of his four years at the Military Academy. Upon graduation with a degree of Bachelor of Science, he is commissioned as a second lieutenant and must serve for at least four years.

THE UNITED STATES NAVAL ACADEMY

Source: U. S. Naval Academy.

On October 10, 1845, the Naval School was established at Fort Severn, Annapolis, Maryland. Five years later it was renamed the United States Naval Academy, and the following year a regular four-year course was adopted. At present, the curriculum consists of courses in the following departments: executive; seamanship and navigation; ordnance and gunnery; marine engineering; aviation; electrical engineering; mathematics; English, history and government; foreign languages; hygiene; and physical training.

Candidates are selected as follows:

- 5 from the District of Columbia
- 40 sons of men and women killed in action or who have died, or may hereafter die of wounds or injuries, or

disease contracted, in active service in World Wars I and II

- 75 annually from among the sons of officers and enlisted men in the regular Army, Navy, or Marine Corps
- 160 enlisted Navy and Marine personnel selected annually by competitive examination.
- 160 annually chosen by the Secretary of the Navy from the Naval and Marine Corps Reserves
- 5 Puerto Ricans chosen by the Resident Commissioner of Puerto Rico
- 1 on the recommendation of the Governor of Puerto Rico
- 4 Filipinos chosen by the President of the Philippines
- 1 from the Canal Zone
- 20 annually from schools designated by the Army and Navy as honor schools and from NROTC schools.
- 20 from the American republics

Each Senator, Representative, delegate to Congress, and the Vice President may have not more than 5 Midshipmen at the Naval Academy. The President selects the 5 from the District of Columbia, the 40 sons of deceased veterans of World Wars and the 75 sons of officers and enlisted men in the regular Army, Navy or Marine Corps. The President also appoints the sons of holders of the Congressional medal of honor.

Candidates for admission must be between 17 and 21 years of age on April 1 of their entering year. They may qualify by taking entrance examination, by presenting an acceptable secondary school certificate and taking special examinations in English and mathematics, or by completing a sufficient number of acceptable college courses. Candidates must also meet the physical requirements and must be unmarried.

Candidates are paid \$936 a year as midshipmen. Upon graduation, candidates are granted Bachelor of Science degrees and are commissioned as ensigns in the Navy or second lieutenants in the Marine Corps.

THE U. S. COAST GUARD ACADEMY

Source: Our Coast Guard Academy,

Riley Hughes.

On July 31, 1876, the Coast Guard Academy, then known as the Revenue Cutter Service, was established by law. In 1914, the school was named the Revenue Cutter Academy. The following year, when the Revenue Cutter Service was merged with the Life Saving Service to form the Coast Guard, the present name of Coast Guard Academy was established. In 1932, the Coast Guard Academy was moved from Fort Trumbull to another site in New London, where it has remained to this day.

The Academy is accredited by the Association of American Universities and

grants the degree of Bachelor of Science in Marine Engineering to each graduate. The curriculum includes mathematics, physics, marine engineering, seamanship, navigation, history, literature, naval architecture, and other engineering courses.

Candidates for admission must be between 17 and 22 years of age, physically sound, unmarried, and at least 5 feet 6 inches tall. They must agree to remain unmarried until graduation and to serve at least three years after graduation. Cadets are paid \$936 a year and are commissioned as ensigns in the Coast Guard upon graduation.

THE UNITED STATES MERCHANT MARINE ACADEMY

Source: U. S. Maritime Commission.

The United States Merchant Marine Cadet Corps was established on March 15, 1938. Appointments are made on the basis of competitive examinations and a physical examination. Successful candidates, appointed as Midshipmen in the United States Naval Reserve, are assigned to the Academy at Kings Point, Long Island, New York, as Fourth Classmen. They may

choose courses to become either deck or engineer officers. Upon completion of a plebe year, they are assigned to merchant ships as Third Classmen for practical training and 5 hours a day of academic work.

The last two years of the course are spent as Second and First Classmen at the United States Merchant Marine Academy at Kings Point, Long Island, New York. The course of study includes marine engineering, navigation, electricity, ship construction, naval science and tactics, economics, business, language, history, and other subjects.

A candidate must be an unmarried citizen between the ages of 17 and 21, with exceptions granted to veterans. He must have 15 high-school credits, including 1 unit in algebra, 1 in plane geometry, 1 in physics, and 3 in English.

A candidate is paid \$780 each year by the government except for his Third Class year, when the shipping company pays him at the rate of \$990 per year. Graduates of the Academy receive a license as a deck or engineer officer in the Merchant Marine, a commission as ensign in the United States Naval Reserve, and the degree of Bachelor of Science upon accreditation by the Association of American Universities.

¹An officer with dependents is not entitled to rental allowance under either of the following conditions: (a) while he is assigned public quarters and his dependents are not prevented by reason of orders of competent authority from dwelling with him; (b) while his dependents occupy public quarters. An officer without dependents is not entitled to rental allowance under any of the following conditions: (a) while he is on sea duty unless the sea duty is temporary duty not exceeding three months; (b) while he is on field duty unless his commanding officer certifies that he was necessarily required to procure quarters at his own expense; (c) while he occupies (or is assigned) public quarters.

²Subsistence allowance on this table is computed on the basis of a 30-day month. For a month of a greater or lesser number of days the amounts should be correspondingly increased or decreased.

³Personal cash allowance is \$416.67. ⁴Personal cash allowance is \$183.33. ⁵Personal cash allowance is \$41.67.

⁶A warrant officer promoted to commissioned warrant officer may be paid the pay provided for a warrant officer if greater than the pay of a commissioned warrant officer. When the total pay and allowances of a commissioned warrant officer shall exceed the rate of \$550.00 per month, the amount of the rental allowance to which such officer is entitled shall be reduced by the amount above \$550.00.

⁷Commissioned warrant officers during first 10 years of commissioned service are entitled to base pay at the rate of \$2520 per annum and the allowances of the second pay period; a certificate of creditable record is not required.

DECLARATIONS OF WAR

Address of the President of the United States before a joint session of the two Houses of Congress requesting that Congress declare that there exists a state of war between the United States and the Japanese Empire.

To the Congress of the United States:

Yesterday, December 7, 1941—a date which will live in infamy—the United States of America was suddenly and deliberately attacked by naval and air forces of the Empire of Japan.

The United States was at peace with that Nation and, at the solicitation of Japan, was still in conversation with its Government and its Emperor looking toward the maintenance of peace in the Pacific. Indeed, one hour after Japanese air squadrons had commenced bombing in Oahu, the Japanese Ambassador to the United States and his colleague delivered to the Secretary of State a formal reply to a recent American message. While this reply stated that it seemed useless to continue the existing diplomatic negotiations, it contained no threat or hint of war or armed attack.

It will be recorded that the distance of Hawaii from Japan makes it obvious that the attack was deliberately planned many days or even weeks ago. During the intervening time the Japanese Government has deliberately sought to deceive the United States by false statements and expressions of hope for continued peace.

The attack yesterday on the Hawaiian Islands has caused severe damage to American naval and military forces. Very many American lives have been lost. In addition, American ships have been reported torpedoed on the high seas between San Francisco and Honolulu.

Yesterday the Japanese Government also launched an attack against Malaya.

Last night the Japanese forces attacked Hong Kong.

Last night Japanese forces attacked Guam.

Last night Japanese forces attacked the Philippine Islands.

Last night the Japanese attacked Wake Island.

This morning the Japanese attacked Midway Island.

Japan has, therefore, undertaken a surprise offensive extending throughout the Pacific area. The facts of yesterday speak for themselves. The people of the United States have already formed their opinions and well understand the implications to the very life and safety of our Nation.

As Commander in Chief of the Army and Navy I have directed that all measures be taken for our defense.

Always will we remember the character of the onslaught against us.

No matter how long it may take us to overcome these premeditated invasions, the American people in their righteous might will win through to absolute victory.

I believe I interpret the will of the Congress and of the people when I assert that we will not only defend ourselves to the uttermost but will make very certain that this form of treachery shall never endanger us again.

Hostilities exist. There is no blinking at the fact that our people, our territory, and our interests are in grave danger.

With confidence in our armed forces—with the unbounded determination of our people—we will gain the inevitable triumph—so help us God.

I ask that the Congress declare that since the unprovoked and dastardly attack by Japan on Sunday, December 7, a state of war has existed between the United States and the Japanese Empire.

FRANKLIN D. ROOSEVELT

THE WHITE HOUSE

December 8, 1941.

Public Law 328—77th Congress Joint Resolution

Declaring that a state of war exists between the Imperial Government of Japan and the Government and the people of the United States and making provisions to prosecute the same.

Whereas the Imperial Government of Japan has committed unprovoked acts of war against the Government and the people of the United States of America: Therefore be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the state of war between the United States and the Imperial Government of Japan which has thus been thrust upon the United States is hereby formally declared;

and the President is hereby authorized and directed to employ the entire naval and military forces of the United States and the resources of the Government to carry on war against the Imperial Government of Japan; and, to bring the conflict to a successful termination, all of the resources of the country are hereby pledged by the Congress of the United States.

Approved, December 8, 1941, 4:10 P.M.,
E. S. T.

Declarations of War—(cont.)

Message from the President of the United States transmitting a request that the Congress recognize a state of war between the United States and Germany, and between the United States and Italy.

To the Congress of the United States:

On the morning of December eleventh, the Government of Germany, pursuing its course of world conquest, declared war against the United States.

The long known and the long expected has thus taken place. The forces endeavoring to enslave the entire world now are moving towards this hemisphere.

Never before has there been a greater challenge to life, liberty, and civilization.

Delay invites greater danger. Rapid and united effort by all of the peoples of the

world who are determined to remain free will ensure a world victory of the force of justice and of righteousness over the forces of savagery and of barbarism.

Italy also has declared war against the United States.

I therefore request the Congress to recognize a state of war between the United States and Germany, and between the United States and Italy.

FRANKLIN D. ROOSEVELT

THE WHITE HOUSE

December 11, 1941.

Public Law 331—77th Congress

Joint Resolution

Declaring that a state of war exists between the Government of Germany and the Government and the people of the United States and making provision to prosecute the same

Whereas the Government of Germany has formally declared war against the Government and the people of the United States of America: Therefore be it

Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled, That the state of war between the United States and the Government of Germany which has thus been thrust upon the United States is hereby formally declared; and the President is hereby authorized and directed to employ the entire naval and military forces

of the United States and the resources of the Government to carry on war against the Government of Germany; and, to bring the conflict to a successful termination, all of the resources of the country are hereby pledged by the Congress of the United States.

Approved, December 11, 1941, 3:05 P.M.
E. S. T.

In similar wording, war was declared against the Government of Italy by Joint Resolution, Public Law 332, approved December 11, 1941, 3:06 P.M.

¹Greatest strength of Continental Army was about 35,000, November 1778.

²Total number undoubtedly much larger, since records were incomplete.

³Represents enlistments; hence in excess of actual number of troops since reenlistments were counted as a term of service.

⁴Actual deaths larger since records of Confederates far from complete.

⁵Estimated on Union records but number believed to be considerably larger.

⁶Based on highest total for year 1865.

⁷Excludes 999 Confederate Marines of which 527 were casualties.

⁸Excludes 28 killed on the U.S.S. Maine.

⁹Philippine Insurrection, 1899 to 1902; Cuban pacification, 1906 to 1909; China Relief Expedition, 1900 to 1901; Mexican Border, 1911 to 1916; Punitive Expedition, 1916.

¹⁰Approximately. Includes National Guard in Federal Service during Mexican border incidents.

¹¹Number incurred among 182,674 individuals, many having been wounded more than once.

¹²This figure includes those who served in the Nurse Corps of the U. S. Navy but does not include commissioned and warrant officers who were serving in the Regular Navy and Naval Reserve Force.

¹³Includes killed in action, died of wounds, died while captured or in interned status, declared dead and reported dead from missing in action.

¹⁴Includes 1,047 missing but declared dead.

NOTE: The U. S. Coast Guard in World War II had 172,952 men engaged. There were 1,917 deaths reported, of which 572 were classified as killed in action.

Return of U. S. War Dead

The enormous program for returning the war dead from the battlefronts of the world drew its first results on Oct. 10, 1947 when the U. S. steamer, *Honda Knot* pulled into Marine Park Dock, San Francisco with 3,028 bodies of men who died at Pearl Harbor and other Pacific battlegrounds. The first group destined for the eastern seaboard were brought to the Brooklyn,

New York Army Base, Distribution Center No. 1 on Oct. 25, 1947 for points as far south as Trenton, N. J.; Metropolitan New York area; north to Newburg, New York and all of Connecticut, Massachusetts, and Rhode Island. The *Joseph V. Connolly* brought to N. Y. harbor the first 6,248 war dead from European battlefronts on Oct. 26, 1947.

Secession of States During the Civil War

Confederate States*	Act of secession			Constitution ratified	Provisional government appointed	Readmission date	New constitution ratified
	Legislatures adopted	Vote	No				
Alabama.....	Jan. 11, 1861	61	39	Mar. 13, 1861	June 21, 1865	June 25, 1868	Nov. 16, 1875
Arkansas.....	May 6, 1861	69	1	None	June 22, 1868	Mar. 13, 1868
Florida.....	Jan. 10, 1861	62	7	July 13, 1865	June 25, 1868	May 4, 1868
Georgia.....	Jan. 19, 1861	208	89	Mar. 16, 1861	June 17, 1865	July 15, 1870	Apr. 20, 1868

Virginia.....	Apr. 17, 1861	88	55	Apr. 25, 1861	None	Jan. 26, 1870	July 6, 1869

*Missouri, Kentucky, Maryland and Delaware, although slave states, did not pass an act of secession and declared themselves neutral.

United States Geographic Data

Source: U. S. Geological Survey.

Highest point: Mt. Whitney, Calif.*	14,495 ft.
Lowest point: Death Valley, Calif.*	275 ft. below sea level
Most northern point: Lake of the Woods projection, Minn.	49° 23' N. lat.
Most southern point: Cape Sable, Fla.	25° 07' N. lat.
Most eastern point: West Quoddy Head, Maine	66° 57' W. long.
Most western point: Cape Alaya, Wash.	124° 44' W. long.
Places farthest apart: Cape Flattery, Wash., to a point on the Florida coast south of Miami	2,835 mi.
Geographic center: near Lebanon, Smith County, Kans.	{ 39° 50' N. lat. 98° 35' W. long.
Northern boundary: Canada and Great Lakes	3,987 mi.
Southern boundary: Gulf of Mexico and Mexican boundary	5,654 mi.
Eastern boundary: Atlantic tidal coastline	5,565 mi.
Western boundary: Pacific tidal coastline	2,730 mi.
Total U. S. boundary	17,936 mi.

*The highest and lowest points in the U. S. are 86 mi. apart.

Territorial Expansion of the United States

Accession	Date	Area, sq. mi. ¹
CONTINENTAL UNITED STATES		
Territory in 1790 ²		888,811
Louisiana Purchase	1803	827,192
Florida	1819	58,560
By treaty with Spain	1819	13,443
Texas	1845	390,144
Oregon	1846	285,580
Mexican Cession	1848	529,017
Gadsden Purchase	1853	29,640
Total		3,022,387

OUTLYING TERRITORY³

Alaska Territory	1867	586,400
Hawaii Territory ⁴	1898	6,454
Puerto Rico	1899	3,435
Guam	1899	206
American Samoa	1900	76
Panama Canal Zone	1904	553
Virgin Islands of U. S.	1917	133
Trust territory ⁵	1947	846
Total		598,103
Aggregate (1947)		3,620,490

¹Total land and water area.
²Includes drainage basin of Red River of the North, not part of any accession, but in the past sometimes considered a part of the Louisiana Purchase.
³The Philippine Islands, acquired in 1899, became independent on July 4, 1946.
⁴Includes Baker, Canton, Enderbury, Howland, Jarvis, Johnston, and Midway Islands; also certain other outlying islands (21 sq. mi.).
⁵Consists of the Marianas, Caroline, and Marshall Islands, formerly held by Japan under mandate.

Water Area under U. S. Jurisdiction

Water	Area, sq. mi.
Atlantic Ocean	2,298
Chesapeake Bay	3,237
Delaware Bay	665
Erie, Lake	5,002
Georgia and Juan de Fuca, Straits of	1,610
Huron, Lake	8,975

FOREST RESOURCES OF THE UNITED STATES

The forests of the United States include over 800 different kinds of trees and still cover millions of acres. But since the days when half of the United States was forest the amount of forest land has decreased by about half and the condition of the remaining forests has deteriorated badly, necessitating a reforestation program.

United States Forest Land, 1940

(in acres)

*The figures for the states show only the Indians under jurisdiction of the Office of Indian Affairs. The total includes an estimated population of 112,105 distributed in the following states: California 14,450; Michigan 5,013; New York 9,042; Oklahoma 83,100; and Washington 500.

†Previous years' estimate.

NOTE: Population for other years: 1900, 270,544; 1910, 304,950; 1920, 336,337; 1930, 340,541; 1940, 361,816; and 1945, 393,622. There are discrepancies between these figures and those of the Bureau of the Census, mainly because of variations in the definition of the word Indian.

*For 1820-67, figures are for alien passengers arriving; for 1868-1903, for immigrants arriving; for 1904-06, for aliens admitted; and for 1907-46, for immigrant aliens admitted.

Population of United States, Territories, and Possessions, 1930-1940

Source: U. S. Bureau of the Census.

Area	Population		Per- cent in-crease
	1930	1940	
Continental United States	122,775,046	131,669,275	7.2
Alaska	59,278	72,524	22.3
American Samoa	10,055	12,908	28.4
Guam	18,509	22,290	20.4
Hawaii	368,336	423,330	14.9
Panama Canal Zone	39,467	51,827	31.3
Philippine Islands*	13,513,000	16,356,000	21.0
Puerto Rico	1,543,913	1,869,255	21.1
Virgin Islands	22,012	24,889	13.1
Military and naval, etc., services abroad	89,453	118,933	33.0
United States, with ter-ritories and possessions	138,439,069	150,621,231	8.8

*The Philippine Islands became independent on July 4, 1946.

One Accidental Death Every 5 Minutes in 1946

Source: National Safety Council.

The nation's 1946 accident totals can be figured at the following approximate rates:

Class of accident	One every	
All accidents	Deaths	5½ minutes
	Injuries	3 seconds
Motor vehicle	Deaths	15½ minutes
	Injuries	26 seconds
Occupational*	Deaths	32 minutes
	Injuries	15 seconds
Workers off-job*	Deaths	14½ minutes
	Injuries	10 seconds
Home*	Deaths	16 minutes
	Injuries	6 seconds
Public non-motor vehicle*	Deaths	31 minutes
	Injuries	15 seconds

*Civilians only.

Death Rates for Selected Causes, 1910-46

¹Percentages not shown are less than one-tenth of one percent.²Persons reported in 1910 as of Polish mother tongue born in Austria, Germany, and Russia have been deducted from their respective countries and combined as Poland.³Turkey in Asia included with Turkey in Europe prior to 1910.⁴Includes 4,635 persons born in Serbia and 5,363 persons born in Montenegro, which became part of Yugoslavia in 1918.⁵Turkey in Asia included Armenia, Palestine, and Syria in 1910. Subsequent to 1910 Armenia included with "Other Asia." ⁶Newfoundland included with Canada in 1900.

A Brief Summary of Naturalization Requirements and Procedure

Source: Immigration and Naturalization Service.

An applicant for naturalization must have been lawfully admitted to the United States for permanent residence.

The first step toward becoming a citizen is to make a declaration of intention, commonly called taking out the first paper. An applicant for the first paper must be at least 18 years old and may take out the first paper at any time after arrival as a permanent resident and at any place.

When applying for the first paper, an applicant must fill out Form N-300. After the Government receives and checks the Form N-300, the applicant is notified as to when and where to get the first paper. The clerk of the court fills out the first paper, using the information the applicant gave in Form N-300. The applicant must sign the first paper before the clerk of the court and swear that the statements in it are true. The applicant pays \$3 to the clerk of the court for the declaration of intention.

The procedure for filing a petition for naturalization and becoming a citizen is commonly called taking out the second paper, Form N-400.

An applicant must be at least 20 years old to file a declaration of intention with the petition. An alien filing under a section not requiring a declaration of intention may file a petition upon reaching the age of 18.

An applicant must be able to carry on an ordinary conversation in English and to sign his name (unless physically unable to talk or to write). Some courts require that an applicant for a second paper must be able to read English; the applicant should find out whether the court in his district has such a requirement.

An applicant must have lived continuously in the United States for the num-

ber of years required by law; for aliens who are required to have a first paper, that is five years; they must have lived at least the last six months of that five-year period in the state where they apply for the second paper. For wives and husbands of citizens of the United States and some of the other aliens who do not need a first paper it means one, two, or three years, depending on the date of marriage or other facts of the case.

The applicant will be notified by the Immigration and Naturalization office when and where to come for his first hearing. The applicant must take with him two citizen witnesses to this hearing. A naturalization examiner questions them separately to make sure the applicant meets the requirements of the naturalization laws. If the examiner is satisfied that the applicant does, he helps him file a petition for naturalization. At this time the applicant pays \$8 to the clerk of the court for the petition and the certificate of naturalization.

Not less than thirty days after the petition was filed, the applicant is notified to appear in the naturalization court for a final hearing to renounce allegiance to the foreign government and to take an oath of allegiance to the United States.

The examiner may recommend that an application for citizenship be granted, denied, or put off until the applicant is better prepared. If the examiner recommends that the petition be denied, notice of this recommendation is sent to the applicant before the case is put on the court calendar for final hearing. The applicant may ask to be examined by the judge in court if he feels that the examiner's recommendation is not just.

Population for Urban Groups and for Rural Territory, 1910 to 1940

The urban area is made up for the most part of cities and other incorporated places having 2,500 inhabitants or more. In addition, it includes unincorporated political subdivisions with a population of 10,000 or more and a population density of 1,000 or more per square mile, and in the states of Massachusetts, Rhode Island, and New Hampshire those towns (townships) which contain a village of 2,500 or more, comprising either by itself or when combined with other villages within the same town, more than fifty per cent of the total population of the town.

The remainder of the population is classified as rural and is subdivided into the rural-farm population, which comprises all rural residents living on farms, without regard to occupation, and the rural-nonfarm population, which comprises the remaining rural population.

¹Law adopted applying to male only; laboratory test authorized but not required.

²Divorce suits may be filed after 2 months' residence, but an additional month must elapse before a decree may be granted.

³Residents 24 hours, nonresidents 96 hours.

⁴One year's residence for divorce based on adultery or bigamy.

⁵Common-law marriage age.

⁶One year where the cause for divorce arose within the state.

⁷Three years on grounds of desertion.

⁸Parties must have married in the state or resided there when offense was committed.

*Estimate, based on incomplete information.

Traffic authorities generally collect reports of non-fatal injury accidents and, in most cases, of property damage accidents. Comparisons from state to state lack validity, however, because of wide variation in completeness of reporting. National ratios commonly used are: 35 injuries and 150 property damage accidents for each death.

Transportation Accident Death Rates, 1944 to 1946

Source: National Safety Council.

Kind of transportation	1946			1944-46 average death rate
	Mileage*	Deaths	Death rate per 100,000,000 miles*	
Passenger operations				
Passenger deaths:†				
Passenger automobiles and taxis†.....	620,000,000,000	15,400	2.5	2.7
Buses.....	72,000,000,000	140	0.19	0.19
Railroad passenger trains.....	64,800,000,000	115	0.18	0.21
Scheduled air transport planes.....	6,067,000,000	75	1.2	1.7
All deaths:‡				
Passenger automobiles and taxis†.....	620,000,000,000	24,700	4.0	4.4
Buses.....	72,000,000,000	1,000	1.4	1.4
Railroad passenger trains.....	64,800,000,000	2,104	3.2	2.6
Scheduled air transport planes.....	6,067,000,000	107	1.8	2.1
Freight operations				
All deaths:‡				
Motor trucks.....	92,000,000,000	9,300	10.1	10.5
Freight trains.....	670,000,000,000	2,413	0.36	0.35

*Mileage in the section "Passenger operations" is passenger-miles; in the section "Freight operations" it is freight ton-miles.

†Drivers of passenger automobiles are considered passengers.

‡All persons—pedestrians, trespassers, etc., as well as passengers—killed in the operation of the vehicles are included.

Principal Types of Accidental Deaths, 1913 to 1946

Source: National Safety Council.

Year	Motor vehicle	Falls	All burns*	Drowning	Rail-road	Fire-arms	Poison gases	Poisons (except gas)	All types
1913	4,200	18,700	9,350	10,000	12,500	2,400	3,550	3,200	82,500

1923	18,400	16,800	9,550	7,000	8,100	2,950	2,800	2,950	84,400
1928	28,000	19,600	9,000	8,750	7,150	3,000	2,800	2,850	95,000
1933	31,363	21,746	7,341	7,465	5,410	3,026	1,668	2,334	90,932
1938	32,582	25,454	7,145	7,347	4,868	2,696	1,459	2,196	93,805
1941	39,969	25,470	7,820	6,930	5,390	2,414	1,540	1,830	101,513
1942	28,309	25,460	9,010	7,120	5,454	2,741	1,760	1,800	95,889
1943	23,823	28,000	10,450	7,710	5,231	2,318	2,110	1,890	99,038
1944	24,282	26,170	10,040	7,030	5,119	2,412	1,970	2,090	95,237
1945	28,076	26,580	9,170	7,030	5,023	2,454	2,200	2,100	95,918
1946	33,700	26,400	9,300	7,200	4,700	2,900	1,950	2,100	99,000

*Includes burns by chemicals, fire, steam, or any other hot substance; also deaths directly resulting from conflagrations, regardless of nature of injury.

Motor Vehicle Deaths by Type of Accident, 1913 to 1946

Source: National Safety Council.

Year	Deaths from collisions with—							Deaths from non-collision accidents*	Total deaths†
	Pedestrians	Other motor vehicles	Rail-road trains	Street cars	Bi-cycles	Animal-drawn vehicle or animal	Fixed objects*		
1913	4,200
1918	10,700
1923	18,400
1928	11,420	4,310	2,140	570	950	540	8,070	28,000	28,000
1933	12,840	6,470	1,437	318	400	310	900	8,680	31,363
1938	12,850	8,900	1,490	165	720	170	940	7,350	32,582
1941	13,550	12,500	1,840	118	910	250	1,350	9,450	39,969
1942	10,650	7,300	1,754	124	650	240	850	6,740	28,309
1943	9,900	5,300	1,448	171	450	160	700	5,690	23,823
1944	9,900	5,700	1,663	175	400	140	700	5,600	24,282
1945	11,000	7,150	1,739	163	500	130	800	6,600	28,076
1946	11,800	9,500	1,730	140	550	130	1,000	8,850	33,700

*Totals of deaths in fixed object collisions are considerably smaller than those shown in editions of Accident Facts prior to 1940, and death totals in non-collision accidents are larger. This is due to transferring to non-collision, those deaths in accidents where the car left the highway and then struck a fixed object. The remaining deaths classified as fixed objects are those which occurred when cars struck fixed objects in roadway, or immediately adjacent to rural roadway. This is in accordance with accepted accident definitions.

†The totals do not quite equal the sum of the various types because the estimates were generally made only to the nearest 10 deaths, and to the nearest 50 deaths for certain types.

Foreign and U. S. Motor Vehicle Death Rates

1946.....	115	17	736	2,025	201	1,618	4,712

*Persons on or getting on or off passenger-carrying trains under conditions not constituting trespass are designated as "passengers on trains." Other persons lawfully on railway premises in connection with their journeys by railways are designated as "travelers not on trains."

†Death totals in this column exclude subsequent fatalities due to lack of information.

‡The sum of the items in the preceding columns exceeds the figure in the "Total" column because of duplication, e.g., employees killed in grade crossing accidents.

§Including those occurring more than 24 hours after injury.

**Deaths to passengers on trains and travelers not on trains are combined.

¹Applies to nonresidents. The term "reciprocal" means that the state will extend to a nonresident the identical privileges granted by his home state to nonresident motorists. In some states visitors must register within a specified time. In most states persons who intend to reside permanently must buy new plates and secure new driving license at once, or within a limited period. Acquisition of employment or placing children in public school is often considered intention to reside permanently.

²None on used cars.

³Until expiration of home registration.

⁴Three months before current registration expires.

⁵Use tax on new cars, first registration of used cars.

⁶Bill of sale must be filed.

⁷Excise tax.

⁸Permit showing compliance with state compulsory liability insurance law must be obtained after 30 days.

⁹State has compulsory insurance.

¹⁰For cars not previously registered in state and for those being transferred to another owner.

¹¹\$15 maximum.

¹²Registry tax on first registration in state.

The National Park System of the United States

The National Park System of the United States, administered by the National Park Service, a bureau of the Department of the Interior, embraces a total of 171 areas, containing approximately 20,775,000 acres in federal ownership. Started with the establishment of Yellowstone National Park in 1872, the system includes not only the most extraordinary and spectacular scenic exhibits in the United States proper and in Alaska and Hawaii but also a large number of sites distinguished for their historic or pre-historic importance or scientific interest. The number and extent of the various types of areas which comprise the system, as of June 3, 1947, are as follows:

Type of area	Number	Federal land (acres)	Lands within exterior boundaries not federally owned (acres)	Total lands within exterior boundaries (acres)
National Parks.....	28	11,346,729.64	330,249.63	11,676,979.27
National Historical Parks.....	4	8,341.58	2,406.54	10,748.12
National Monuments.....	85	9,279,035.02	412,343.86	9,691,378.88
National Military Parks.....	11	24,013.50	3,173.15	27,186.65
National Battlefield Parks.....	1	684.44	684.44

National Parks

Source: National Park Service.

Name, location and year established	Area in U. S. ownership, acres	Outstanding characteristics
Acadia (Maine), 1919.....	28,420.21	Rugged seashore on Mt. Desert Island and adjacent mainland
Big Bend (Texas), 1944.....	691,338.95	Mountains and desert bordering the Rio Grande
Bryce Canyon (Utah), 1928.....	36,010.38	Area of grotesque eroded rocks brilliantly colored
Carlsbad Caverns (N. Mex.), 1930.....	45,526.59	One of the world's largest known caves; spectacular flight of bats daily, in summer
Crater Lake (Oregon), 1902.....	160,290.33	Deep blue lake in crater of inactive volcano
Everglades (Florida), 1947.....	270,720.00	Sub-tropical area with abundant bird and animal life
Glacier (Montana), 1910.....	997,486.80	Rocky mountains with many glaciers and lakes
Grand Canyon (Arizona), 1919.....	645,135.91	One of the world's largest known caves; spectacular flight of bats daily, in summer
Grand Teton (Wyoming), 1929.....	94,892.92	Mile deep gorge, 4 to 18 miles wide, 217 miles long, of which 105 miles are within the park; fantastically sculptured
Great Smoky Mts. (N. C.-Tenn.), 1930.....	461,000.19	Picturesque range of high mountain peaks
Hawaii (Territory Hawaii), 1916.....	173,404.60	Highest mountain range east of Black Hills; luxuriant foliage
Hot Springs (Arkansas), 1921.....	1,019.13	Spectacular volcanic area with two active volcanoes
Isle Royale (Michigan), 1940.....	133,838.51	47 mineral hot springs said to have therapeutic value
Kings Canyon (California), 1940.....	452,904.82	Largest wilderness island in Lake Superior; great moose herd
Lassen Volcanic (California), 1916.....	103,269.28	Huge canyons; high mountains; giant sequoia trees
Mammoth Cave (Kentucky), 1936.....	50,547.51	Only recently active volcano in continental United States
Mesa Verde (Colorado), 1906.....	51,017.87	Vast limestone labyrinth with underground river
Mount McKinley (Alaska), 1917.....	1,939,199.04	Best preserved pre-historic cliff dwellings in United States
Mount Rainier (Washington), 1899.....	241,524.77	Highest mountain in North America; large glaciers; big game
Olympic (Washington), 1938.....	846,608.71	Greatest single-peak glacial system in United States
Platt (Oklahoma), 1906.....	911.97	Finest mountain wilderness of Pacific Northwest
Rocky Mountain (Colorado), 1915.....	252,626.19	Cold mineral springs with distinctive properties
Sequoia (California), 1890.....	385,100.13	Section of the Rocky Mountains; 65 peaks over 10,000 feet
Shenandoah (Virginia), 1935.....	193,472.98	Groves of giant sequoia trees; world's oldest and largest living trees; includes Mt. Whitney, highest mountain in U. S.
Wind Cave (South Dakota), 1903.....	26,573.62	Tree covered mountains; scenic Skyline Drive
Yellowstone (Wyoming-Montana-Idaho), 1872.....	2,213,206.55	Limestone caverns in Black Hills; buffalo herd
Yosemite (California), 1890.....	756,440.62	World's greatest geyser area; spectacular falls and canyon
zion (Utah), 1919.....	94,241.06	Mountains; inspiring gorges and waterfalls; giant sequoias
		Multicolored gorge in heart of southern Utah desert

National Historical Parks

Name and location	Acreage in U. S. ownership
Abraham Lincoln (Kentucky)	116.50

Accredited United States Colleges and Universities, 1947-48

All schools accredited by the 7 recognized national and regional accrediting associations are listed. The date of founding gives the date of the original issue of the charter. The number of faculty and students includes those on full-time status only. Volumes in library excludes pamphlets. Endowment does not include yearly grants given to state institutions for maintenance, etc.

M=Male; F=Female; C=Coeducational; Co=Coordinate.

Educational Reorganization in U. S.

Source: Encyclopaedia Britannica.

Since about 1910, a very important reorganization of the upper years of the public school systems in the United States has taken place. Instead of the traditional educational organization consisting of eight years of elementary school and four years

of secondary school, there has been evolved a six-year elementary school dealing with the fundamental tools and skills, a three-year junior high school with a greatly enriched course of study designed to meet the special biological and psychological and

social needs of the young people in their teens, and a three-year senior high school planned for later adolescents. This has substituted a 6-3-3 type of educational organization for the former 8-4 type.

Few fundamental changes in educational organization have been accepted more rapidly than this; whereas but two cities had organized junior high schools before 1900, and but ten cities before 1910, 198 cities had organized such schools by 1915, 386 cities by 1920, 704 cities by 1924 and 1,109 cities by 1927, hundreds more since.

Another administrative reorganization, and one of great importance to the future of public education in America, is the extension upward of the public school system to include the 13th and 14th years of

school life—the freshman and sophomore years of the traditional college. A number of American cities have added these years to their public school system by organizing what has come to be known as the junior college, thus making their public school system a 6-3-3-2 school system.

The final result of such a reorganization will be not only a kindergarten 6-3-3-2 school system, or possibly a kindergarten 6-4-4 plan of organization, but also the dropping of the first two years of work from the traditional college and the transformation of the universities of America into what continental European universities have for long been—a group of professional schools beginning with the junior year.

The Story of the Fraternity

THE COLLEGE fraternity system is as old as the republic in which it serves. It was on the night of December 5, 1776, in the Apollo Room of the Raleigh Tavern in Williamsburg, Virginia, that John Heath, Richard Booker, Thomas Smith, Armistead Smith and John Jones of the College of William and Mary (the second oldest college in the U. S.) formed the first Greek-letter society, Alpha Beta Kappa. The society prospered and adopted all the features which characterize the modern fraternity; a ritual with secret obligations, a motto and a grip. By 1826, the society became purely honorary and other societies were born in different colleges. The first Greekletter sorority was Kappa Alpha Theta, founded at De Pauw University in January 1870.

Fraternities (and sororities) are divided into Social or Academic, professional and honor groups. These groups have their own interfraternity associations which originally were founded to dispel the clan-nish bitterness and rivalry between the fraternities.

On October 9-10, 1943, these interfraternity associations gathered in New York and formed the *National Conference of College Fraternities and Societies* which drew up a constitution for the purpose of defining the various groups and setting up rules and regulations for the member bodies.

The 6 member bodies of the National

Conference of College Fraternities and Societies are as follows:

The National Interfraternity Conference (NIC), founded in New York City, Nov. 18, 1909, membership of 60 social fraternities, Chairman, David A. Embury, 63 Wall St., N. Y. 5.

Professional Interfraternity Conference (PIC), organized March 2, 1928 in Washington, D. C., membership of 28, President, H. G. Wright, 222 W. Adams St., Chicago 6.

National Panhellenic Conference (NPC), social sororities, membership of 20, Chairman, Miss Amy Burnham Onken, Chapin, Ill.

The Association of College Honor Societies (ACHS), founded in New York in 1925, membership of 15, President, Dr. Lawrence R. Guild, University of Southern California, Los Angeles 7.

Professional Panhellenic Association (PPA), founded in 1925, membership of 14, President, Frances R. Murray, 120 Morning-side Road, Verona, N. J.

Association of Education Sororities (AES), founded in 1915, membership of 6, Chairman, Mrs. Frazier B. Adams, Lees Junior College, Jackson, Ky.

The two authoritative publications representing the fraternity system are *The Fraternity Month*, Leland Publishers Inc., St. Paul 4, Minn., and *Banta's Greek Exchange*, George Banta Publishing Co., Menasha, Wisconsin.

Museums of the United States

Source: Questionnaires to Museums.

Academy of Natural Sciences of Philadelphia: 19th and the Parkway, Philadelphia 3, Pa. Open: wkdys. 9-5 (summer 9-4), Sun. 1-5. Free.

Large habitat groups of animals of North America, Africa, Asia. Hall of Earth History and Audubon Bird Hall. Minerals and gems. Library.

Alabama Museum of Natural History: University of Alabama, Tuscaloosa. Open: wkdys. & Sun. 8-5. Free (Archaeological Museum 25c).

All phases of natural history with emphasis on geology. Operates Mound State Archaeological Museum at Moundville, Ala., containing uncovered Indian burials and other Indian material.

American Academy of Arts and Letters: 633 W. 155th St., New York 32. Open: wkdys. & Sun. 2-5 (closed Mon.). Free.

Permanent collection of paintings and sculpture by members of Academy. Spring exhibition of works by newly elected members.

American Museum of Natural History: Central Park W. at 79th St., New York 24. Open: wkdys. 10-5, Sun. & hldys. 1-5. Free. Covers all branches of natural sciences except systematic botany with thorough exhibits in each field. Large habitat groups of animals. Library.

Art Institute of Chicago: Michigan Ave. at Adams St., Chicago 3, Ill. Open: wkdys. 9-5, Sun. 12-5. Adm. 30c (free Wed., Sat., Sun., hldys.).

European and American paintings. Greatest 19th and 20th century French collection in world. Sculpture, prints, drawings. Oriental arts. French, English, American miniature rooms. Library.

Berkshire Museum: Pittsfield, Mass. Open: wkdys. 10-5 (closed Mon.), Sun. 2-5. Free. Art objects from Egyptian to modern times. Paintings and sculpture. Indian and Eskimo exhibits. Original "One Horse Shay."

Brooklyn Museum: Eastern Pkwy., Brooklyn 17, N. Y. Open: wkdys. 10-5 (Tues. 1:30-9:30, except July & Aug.), Sun. & hldys. 1-5. Free.

European and American paintings. Important Egyptian collection. Exhibits showing Primitive and New World cultures. American rooms. Concerts.

Buffalo Fine Arts Academy—Albright Art Gallery: 1285 Elmwood Ave., Buffalo 9, N. Y. Open: wkdys. 10-5 (Mon. 2-6, Wed. 2-10), Sun. 2-6. Free.

European and American paintings, including contemporary works. Sculpture court. Small sculptures and ceramics. Religious art, including illuminated manuscripts. Library and concerts.

Buffalo Museum of Science: Humboldt Park, Buffalo, N. Y. Open: wkdys. 10-5 (Sat. 9-5), Sun. & hldys. 1:30-5:30. Free. African and South Sea exhibits. Chinese pottery. Babylonian seals. First and rare editions of scientific monographs.

California Academy of Sciences: Golden Gate Park, San Francisco 18. Open: wkdys. & Sun. 10-5. Free.

North American and African habitat groups. Exhibits of large game fish. Reptiles, plants, fossils, minerals. Aquarium.

California Palace of the Legion of Honor: Lincoln Park, San Francisco. Open: every day of year 10-5. Free.

European and American paintings. Rodin sculpture and drawings. Furniture, bronzes, porcelain, tapestries. Egyptian art. Organ recitals and movies.

THE AMERICAN ECONOMY

ESSENTIAL FACTS *about* BUSINESS • AGRICULTURE
LABOR • SOCIAL SECURITY • TAXES • WORLD TRADE
by THE RESEARCH INSTITUTE of AMERICA, Inc.

Outstanding Authority in the Analysis of Business Facts, Economic Trends
and Government Action for over 30,000 Business and Professional Firms

ECONOMICS IS MORE THAN THE favorite pastime of a handful of college professors and government officials. It is the sum total of the plants and facilities which help make the goods we buy and use; it includes the service establishment, wholesale house and the corner grocer which help bring the goods and services closer to the ultimate customer. And finally, it includes all of us, 143 million Americans who help the American economy produce and at the same time, as consumers, share its products.

This portion of the *Information Please Almanac* presents essential facts about this economy of ours, what it consists of and how its components work together to turn out the highest standard of living in the world. The statistical tables afford a view of where we stand and how we have come here; imagination must tell us to what new highs the steady progress will eventually carry us.

Our personal fortunes are inextricably tied to what happens in these economic areas. Useful as this section may be as a reference source to answer specific questions, it is intended to do more. Exploring it, page by page, should give the reader an understanding of what the American economy is and what makes it tick.

Statistical Section

Basic facts on American business (starting on page 334) gives a bird's-eye view of American production and income. It shows the relative importance of various industries and trades and the changes which the recent war has wrought in our material fortunes.

What industry makes (starting on page 338) takes a closer look at our industrial output. It follows the steady rise in indus-

trial production since Civil War days, the changes which the war and postwar periods have brought about, and highlights the relative ease with which we have gone through the transitions of the last few years.

What farmers produce (starting at page 344) proves that we are the leading nation in agricultural output as well as in the industrial field, and shows the reasons why.

What commerce distributes (starting at page 347) deals with the wholesale and retail channels through which industry's products flow to the final consumer.

What services contribute (starting at page 350) shows the important place which the hundreds of thousands of small service establishments play in providing us with daily conveniences, the importance of banking and stock exchanges to the financing of our economic effort, and the growing part which advertising plays in bringing buyer and seller together.

What government does and costs (starting at page 354) contains some vital facts on the ever-growing role of government in our everyday lives.

How we work (starting at page 357) deals with all of us: how we are employed, how long we work and what we accomplish.

What we earn and spend—what living costs us (starting at page 360) traces the steady rise in our incomes which is impressive indeed—even after allowing for the higher cost of living. It shows how prices have risen to their high 1947 level—and offers some comfort by proving how they eventually drop in postwar periods.

What we own (starting at page 368) and *what we owe* (starting at page 371) take inventory of the national assets and liabilities in which all of us share.

BASIC FACTS ON AMERICAN BUSINESS

A good measure of our economic health is the Gross National Product which shows the total expenditure by individuals, business and government for goods and services produced by the economy. It more than doubled during the recent war and, contrary to many expectations, even exceeded that unprecedented level in the early postwar years. Private investment and personal consumption quickly took up most of the slack created by the drop in government expenditures for war.

Our national income also continues at just about twice its size during the boom year of 1929. A drop in government payments and a smaller decline in manufacturing, which were inevitable after the end of the war, were largely made up by increases in wholesale and retail trades, services, agriculture, communications and public utilities.

These broad over-all figures obscure, of course, many individual differences. Billion dollar companies and other large concerns account for two-thirds of our output though there are 93 small businesses for every 7 large ones. The average income varies greatly between different states and finally our past history indicates a consistent pattern of ups and downs in our economic well being.

In the favorable economic climate of the early postwar period, the business population was fast growing to unprecedented highs; business failures at the same time continued at a record low.

Gross National Product or Expenditure (in millions of dollars)

WHAT INDUSTRY MAKES

American industry is the most productive in the world. Because of its unsurpassed stock of modern plants, machinery and other productive equipment, the training and efficiency of its more than twenty million workers, and the skillful productive techniques instituted and supervised by intelligent management, industrial output per man-hour in the United States is reliably estimated at approximately twice the British level, three to four times the prewar French and German achievements, and many more times those of other European countries.

Manufacturing is the pivotal industrial occupation, for its periodic expansions and contractions largely determine the level of activity achieved in every other sector of the economy. Most pronounced during the war years was the expansion in durable manufactures, though statistics for most industries show considerable expansion.

The early postwar period saw a quick rise in industrial production for civilian purposes which took up much of the drop in the output of war goods. Construction, however, failed to score the spectacular advances which had been expected. As shown by the average age of the American homes, however, a tremendous market still exists and will eventually produce an unprecedented level of activity once this industry's cost and production problems are solved.

AGE OF AMERICAN HOMES ON APRIL 1, 1940

WHAT FARMERS PRODUCE

The United States is universally recognized as the industrial giant of the world. Less well known is the fact that it is also by far the leading nation in agricultural output.

There is every reason to believe that this substantial margin of leadership will continue, even expand. For a technological and scientific revolution is taking place in agriculture which may well be fully as important—and as dislocating—as the industrial revolution of the 18th and 19th centuries. This revolution on the farm involves the greater use of more efficient machinery, the better application of chemical fertilizers and insecticides, the introduction of greatly improved strains of seed, and the beginnings of the new industry of "chemical farming."

A foretaste of this technological progress took place during World War II. High costs of keeping working stock and high farm wages made farmers anxious to mechanize their farms, and with war-increased incomes they could afford it. Thanks to mechanization and a ready market here and abroad, farm production was steadily above prewar levels throughout the war and postwar periods. This was accomplished even though farm population declined substantially.

Although at present we welcome this record farm production as necessary to our plans for helping to feed the world, it may someday cause us headaches. When other countries up their agricultural output and need less from us, we may again be faced with our old problem of farm surpluses.

WHAT COMMERCE DISTRIBUTES

In a mass-production economy, distribution is a highly intricate process. This is reflected in the fact that more than half the consumer's dollar goes for distribution and less than half for production. (Distribution costs include those of such services as advertising and insurance as well as transportation and selling costs.)

Commerce, like industry and agriculture, has made new records in the last six years. In the retail trade, the postwar shift in sales from non-durable to durable goods follows the pattern dictated by consumer demand. During the war the military importance of airplanes led many to prophesy that the air age was upon us. However, transportation statistics show that air freight is still suffering from growing pains. It will be some time before a substantial portion of our industrial output is transported by air.

WHAT SERVICES CONTRIBUTE

Manufacturing and agriculture can grow steadily more efficient only because they take advantage of various types of business, professional and scientific services. For example, mass production would be impossible without modern accounting systems; and large-scale agriculture could hardly exist without scientific crop and weather services.

Personal services are the remaining stronghold of small, individual enterprise. More than 600,000 small businesses performed 66 percent of those services in 1939. The service industries are the only ones where small business produces as much as half the total output.

But there are big as well as small businesses among the service industries. Financing of the nation's business and much of its government is made possible by the highly organized financial services. Insurance is another field where big as well as small firms fill our steadily increasing demand for all forms of protection.

Through ownership of stocks, bonds, life insurance and savings accounts we all contribute and have a stake in this financing of our complex economic machinery. Contrary to the steady advance of almost all other indices, however, stock and bond yields to the investor have declined steadily throughout the war and are only now beginning to turn upward.

WHAT GOVERNMENT DOES AND COSTS

Ever since the Civil War, the role of government in the American economy has been steadily expanding. While probably more citizens have opposed this trend in the United States than in any other major nation, it has persisted. In the last two decades, first depression, and then war and its dislocations, have sharply accelerated the momentum of such government intervention.

Although many Americans have disliked and distrusted big government, federal power has grown steadily since the Civil War. It seems inevitable that the government will continue to accept an increasingly important role in the economy.

Post-war budgets have been higher than those in any pre-war period. In the peacetime year of 1947, more than half the government's expenses were concerned with war. How to distribute the remaining billions among tax relief, debt reductions and foreign aid was a major problem in 1947.

Our federal government has become so large, and its activities so numerous, that we are likely to overlook the many services performed at the state and local government levels. Nevertheless, in 1946 state and local expenditures amounted to \$11 billion, or 24 percent of total government outlay.

The costs of running the more than 155,000 government units in the nation are immense. The variety of uses to which the billions of dollars raised in taxes or by borrowing is put is bewildering. This section spreads the central facts and figures before you.

STORY OF A JOB*

* Monsanto Chemical Company, 1945

HOW WE WORK

Some of the most difficult problems we faced at the end of the war were concerned with labor. Many observers doubted that jobs could be found for ten million veterans. Yet this was accomplished quickly and successfully and postwar employment reached a peacetime high.

Women in industry numbered one-third of the total number of workers during the war. Since then the proportion of women dropped to about one-fourth—just a little higher than the prewar ratio.

After V-J Day, strikes increased rapidly as labor fought to increase real wages and adjust grievances accumulated during the war. But despite substantial increases in living costs, there was no comparable series of strikes in 1947.

WHAT WE EARN AND SPEND—WHAT LIVING COSTS US

"Who gets the money?" is a favorite topic for political debate and more violent action. This section shows how much different groups in the economy—workers, farmers, professional persons, businessmen—receive of the total national income and how they spend it.

Over the long trend the American economy has been characterized by a steady rise in the real income of all groups. These increases have been particularly pronounced during the war years, as shown by the fact that 35 percent of all families have incomes of \$3,000 or more against 6.3 percent in 1935–36. Higher production made possible by greater capital investment per wage earner and greater production efficiency has enabled us to achieve this steady improvement. Thanks to steadily rising farm prices, farm income scored the most notable advances during recent years.

The increase in money incomes, however, does not tell the full story. Along with wages and other earnings, prices too have soared, as they always do in periods of war activity. While cost of living has gone up more than 50 percent since 1939, farm prices and raw material costs have more than doubled during the same period. Judging by previous postwar periods, however, there is strong hope that prices will gradually adjust though they will almost certainly never return to prewar levels.

The crucial thing, however, is how each of us fared on the basis of comparing the increase in our own income with the higher cost of living. In these terms, higher prices have only slowed down, not cancelled out our steady progress to greater economic well being. The greatest relative increase in income went to the farmer, the under-dog of yesterday.

*Retail cost of 1935-39 average annual purchases of farm food products by a family of three average consumers; farm value of equivalent quantities sold by producers adjusted for value of by-products.

WHAT WE OWN

What and how consumers, businessmen and government units save and invest jointly determines the enduring wealth of the country. Money, stocks, bonds, property of all kinds—these make up the stock of American wealth. The facts about them are statistically summarized and analyzed in the present section. The standard of living which our wealth enables us to enjoy is also itemized and compared with that of other nations.

The following figures on the expanding ownership of modern conveniences point up the rise in American living standards.

Automobiles: 8,000 in 1900; 17,500,000 in 1925; 27,730,000 today.

Telephones: 1,300,000 in 1900; 16,900,000 in 1925; 31,600,000 today.

Homes with radios: 3,700,000 in 1925; 33,998,000 today.

Homes with electric washers: 2,800,000 in 1926; 18,768,000 today.

Homes with electric ranges: 300,000 in 1926; 4,027,000 today.

Homes with vacuum cleaners: 4,000,000 in 1926; 18,249,000 today.

Homes with electric refrigerators: 68,000 in 1926; 21,440,000 today.

WHAT WE OWE

Much modern wealth is also debt; one man's asset is frequently another man's liability. For example, while 85 million Americans consider their \$50 billion in war and savings bonds as assets they own, the bonds are also liabilities which, as part of the public debt, must be financed or retired.

Our steadily growing national debt was multiplied by the war. Worried by the size of this debt and the burden it enforced on the economy in the form of interest charges, people were sharply divided on the question of how much of our current income should be used for debt retirement.

The debt we incur as individuals took a nose dive early in the war, partly because of government restrictions and partly because many of the goods we normally buy on credit just weren't available. With the end of the war, however, consumer credit began to rise sharply and the removal of remaining controls over installment sales late in 1947 promised to lift the total to even higher levels.

UNITED STATES AND THE WORLD ECONOMY

U. S. Foreign Trade

The foreign trade of the United States during 1946 was marked by a record level of exports and the tremendous imbalance between receipts and payments. Exports of goods, including surplus property sales and provision of civilian supplies to occupied areas, totaled \$12,140 million during the year against imports of \$5,264 million—an import deficit of \$6,876 million. Altogether, foreign countries owed the United States \$15,264 million on current transactions during 1946 against United States indebtedness to foreigners of \$7,131 million, a gap of more than \$8 billion.

Foreign countries financed the payment of this deficit (1) through the sale of foreign-owned long term and short term assets including gold—\$2.2 billion; (2) through United States private and government loans—\$3.0 billion, and (3) through United States gifts and contributions, both government and private, \$3.1 billion.

Reconstruction needs of war-devastated areas and backlogs of unsatisfied foreign demand built up during the war period account for the large volume of exports during 1946. Imports lagged due to the slow rate of recovery in war-damaged areas. European production has been particularly held back by the disruption of coal production in the Ruhr.

Table I presents total United States exports and imports of merchandise from 1918 to 1946. The extraordinary rise of

exports after 1940 reflects the effect of lend-lease shipments during the war period for which payment was not required. As previously noted, high volume exports since the war are largely the result of United States gifts and loans.

The failure of imports to keep pace with the growth of exports makes the continuance of high volume exports doubtful. The discontinuance of lend-lease and UNRRA operations means that exports must now be financed out of the proceeds of sales to the United States, U. S. loans, and the liquidations of foreign-owned American assets.

However, outstanding United States credits are being rapidly exhausted. While foreign countries have gold and United States dollar balances totaling about \$20 billion, most of these are required for monetary reserves. If large-volume exports are to continue, imports must be increased and United States capital must continue to flow to foreign countries for reconstruction of war damage and the improvement of less developed countries.

The excess of United States exports over imports was even more pronounced during the first six months of 1947. Transfers of goods and services to other countries during this period were at an annual rate of \$20.7 billion, an amount which exceeded by \$12.7 billion the rate at which other countries were providing goods and services to the United States. About one-half of the excess was being financed by loans and other aids from the United States.

During the twenties the ratio of exports to the total production of movable goods averaged about 10 percent. Table II, showing the ratio between exports and the total production of movable goods indicates that, while this proportion declined during the thirties and stood at 7.7 percent in 1937, it increased to 12 percent during 1944. The percentage of movable goods exported during 1946 was 11.9 percent.

On the other hand, the ratio of United States commodity imports to national income ranged during the pre-war period from a high of 7.6 in 1920 to a low of 3.1 in 1938. During the ten-year period 1919 to 1928, the average percentage was 5.6, while during the thirties it declined to 3.6 percent. In 1946, imports constituted 3.0 percent of total national income.

Because the percentage of movable goods exported and the ratio of commodity imports to national income are small, there is a widespread belief that foreign trade is not important to the American economy. This view overlooks the importance of export markets to par-

ticular industries and the strategic character of many imports. Exports account for major percentages of the total United States production of cotton, leaf tobacco, dried fruit, lard, aircraft and parts, sewing machines, office appliances, mining machinery, tractors, petroleum products, sulfur, carbon black and naval stores. Volume exports mean the difference between profit and loss in many American industries. Tables III and IV list the principal United States commodity exports and imports from 1936 to 1946.

United States exports reflect the industrial character of the country, 52.8 percent of total exports in 1946 consisting of finished manufactured goods. Semimanufactured goods accounted for 9.4 percent, foodstuffs 22.9 percent and crude materials 14.9 percent. Food exports during 1946 constituted an unusually high percentage of total exports, reflecting an over-all world shortage of foodstuffs. United States exports of foodstuffs averaged only 10.5 percent of total exports pre-war.

Crude industrial materials represented the most important class of imported

States imports. In 1946 Canada and the other American Republics supplied 53.5 percent of United States imports and bought almost 45 percent of cash-purchase exports. The importance of western hemisphere countries in the foreign trade of the United States increased greatly during the war—pre-war these countries supplied only 34.7 percent of total imports and accounted for but 32.6 percent of United States exports. As a result of war damage

and disorganized production and distribution, Europe and the Far East declined in importance as sources of United States imports; imports from continental Europe and the Far East declined from 20.4 percent and 30.5 percent of total imports during the 1936–38 period to 10.8 percent and 18.4 percent respectively in 1946. Table VI below shows total exports and imports by leading countries and areas during the period 1936 to 1946.

U. S. Foreign Investments

Before the First World War the United States was a debtor nation on capital account; foreign investments in the United States exceeded United States investments abroad by \$3.7 billions in 1914. World War I, however, completely changed this condition and by the end of 1919, United States investments abroad exceeded foreign investments in the United States by approximately \$3.7 billion. As a result of the great expansion of American foreign investments during the thirties, our net creditor position, excluding war debts, stood at \$8.8 billion in 1930 as compared with \$3.7 billion in 1919.

Foreign holdings in the United States, on the other hand, increased tremendously during the period 1933-39. Foreign capital, seeking safety from possible currency devaluation and the uncertainties of war, sought refuge through conversion into dollar holdings. Short-term dollar holdings of foreigners increased \$2.8 billion between 1933 and 1939, while foreign holdings of American securities largely purchased in the stock market, increased by \$1.4 billion. At the end of 1939, the net creditor position of the U. S. had declined to \$1.8 billion.

This movement gave way in 1940-41 to a reduction of foreign holdings, principally British, to finance war purchases here. After the entry of the United States into the war, however, foreign holdings in the United States increased as government expenditures abroad for the procurement of materials and for the pay and maintenance of troops resulted in substantial acquisitions of dollar balances by foreign countries. These large foreign dollar balances were maintained during 1946. Table VII below shows the Debtor-Creditor position of the United States at the end of 1946; the figure of \$4.7 billion for government long-term investments reflects loans for reconstruction and rehabilitation made to foreign governments, such as the British and French loans.

The net creditor position of \$8 billion at the end of 1946 has been increased during the first half of 1947 by additional drawings against the British line of credit, new loans by the Export-Import Bank, and private loans floated by the Netherlands and Norway.

Foreign needs for reconstruction and development are such that large amounts of American capital will be needed to cover foreign requirements—particularly if the Marshall plan for European reconstruction becomes effective. The net creditor position of the United States will increase rapidly with the expansion of American loans and the reduction of foreign-owned dollar balances to finance needed imports of United States goods.

*No allowance has been made for write-offs and war damage to American properties in foreign countries inasmuch as the full extent of such damage is unknown. It may, however, run into several hundred million dollars.

International Bank

The International Bank for Reconstruction and Development, established under the Bretton Woods Agreement, began operations in 1947. The Bank's first loan was a credit of \$250 million for the French government. This loan was made out of the Bank's capital.

The Bank made its first offering of securities in the United States investment market in July. The response was good,

the issue of \$250 million in bonds being oversubscribed. The increased operations of the World Bank are expected to supply dollars to bolster foreign purchasing power for United States goods.

The International Bank has an authorized capital of \$10 billion of which \$8,024 million has been subscribed by the 44 member nations. The Bank finances or assists in financing, on a non-political basis, projects for the reconstruction of war-damaged economies and for the development of less developed countries. The loans made must be guaranteed by the borrowing country. The United States subscription to the Bank's capital is \$3.175 billion and this country controls 35.1 percent of the total voting power of the bank.

Foreign Exchange

The obvious difference between foreign and ordinary domestic trade is the fact that the buyer and seller use different currency units. The United States exporter wants payments in dollars; the Brazilian importer uses cruzeiros in making his purchases and sales. The price which the American importer pays for the foreign currency is called the rate of exchange. Like all prices, exchange rates are determined by the forces of supply and demand. American importers offer dollars to the banks in order to obtain foreign purchasing power. Consequently, importers and those who are making foreign payments, such as tourists traveling abroad, persons sending funds to relatives in foreign countries, and

businessmen paying premiums to insurance companies abroad, create a demand for foreign currencies. Exporters selling to foreign buyers, motion picture companies receiving royalties on films exhibited abroad and investors receiving interest on foreign investments, create the supply of foreign currencies since the foreign debtor must offer his own currency to obtain the dollars with which to make payment to the American creditor.

A world picture of total supply of and demand for dollars over a period of a year is presented by the annual summary of our international balance of accounts which appears in Table VIII.

Monetary Fund

The Monetary Fund was established to promote world trade by insuring the stability of exchange rates. Exchange instability had disrupted international trade during the thirties. Member nations under the Fund agreement are bound to maintain stable exchange rates and may not use exchange depreciation as a competitive weapon in seeking to expand foreign markets for their products.

Forty-four nations are members of the Fund, total subscriptions amount to \$7.7 billion, the United States subscription of \$2.75 billions representing 35.6 percent of the total; this country exercises 31.5 percent of the voting control of the Fund.

The Fund began stabilization operations in March 1947 and has made stabilization loans to two countries; France, \$50 million and \$12 million to the Netherlands, half in British pounds. Table IX below shows the initial par values of currencies established with the Fund.

Trade Agreements

The economic warfare of the thirties brought economic distress to all of the nations of the world—to those imposing the trade restrictions as well as those against whom the restrictions were aimed. This economic warfare was one of the most potent causes of the Second World War.

The realization of this truth has influenced United States foreign policy during the postwar period. The United States has taken the lead in proposing the renunciation of economic warfare and a cooperative approach to the restoration of world trade and prosperity. The American plan includes the scaling down of tariffs through agreements with other countries under the Reciprocal Trade Agreements program, the establishment of an International Trade Organization and the adoption of a trade charter in which the nations of the world will agree to eliminate restrictive trade practices, exchange stabilization through the Monetary Fund, and loans, either direct or through the World

Bank, to assist in the reconstruction of war-shattered economies and the development of underdeveloped countries.

The United States is negotiating reciprocal trade agreements with 17 nations: Australia, Belgium, Brazil, Canada, Chile, China, Cuba, Czechoslovakia, France, India, Syro-Lebanese Union, Luxemburg, Netherlands, New Zealand, Norway, the Union of South Africa and the United Kingdom. The same nations have drafted the charter of the International Trade Organization which will establish rules for a freer world trade organized on a multilateral basis. During the summer of 1947, sixteen western European countries, under the leadership of France and Britain, met in Paris to prepare a balance sheet of their assets and needs for reconstruction on an overall basis. This is for the purpose of advising

the United States as to what they can do to help themselves and what United States assistance they will require under the Marshall Plan. The Soviet Union and the Eastern European countries under Russian domination were not represented at the Paris conference. Significantly, the U. S. S. R. has not cooperated in the formation and operations of any of the international economic organizations designed to promote world trade and prosperity.

The Reciprocal Trade Agreements Act was originally passed in 1934 and was extended in 1945 for a two-year period. Under the provisions of the Act, the President is authorized to seek concessions from foreign countries for American trade and commerce in return for similar concessions granted their products by the United States. The President has the power to increase or decrease tariff rates

(under the 1945 extension, those in effect on January 1, 1945) by 50 percent.

Since 1934, reciprocal trade agreements have been concluded with 29 countries, with whom we did 65 percent of our normal foreign trade, and which include eight of our ten best customers in 1937. The effectiveness of the Act in promoting international trade and creating domestic employment is difficult to gauge because of the outbreak of the World War in 1939. However, between the years 1934-35 and 1938-39 our exports to trade agreement countries rose by 63 percent, while our exports to non-trade agreement countries rose by only 32 percent. Our imports from agreement countries increased by 22 percent and our imports from non-agreement countries by only 13 percent. The countries with which reciprocal trade agreements have been effected are listed in Table X.

Paraguay.....	Sept. 12, 1946	Apr. 9, 1947

³This replaced a previous supplementary agreement relating to fox furs, signed on Dec. 30, 1939.

The key trading nations meeting at Geneva have concluded 123 trade agreements including 19 new reciprocal trade agreements by the United States. These include one agreement with the recently formed Benelux Customs Union. (The Netherlands, Belgium and Luxembourg.) Agreements were also concluded with Ceylon, Burma and Southern Rhodesia which were not included in the list of key trading nations which appears above.

The new agreements are slated to come into effect on January 1, 1948. In addition to tariff concessions for United States exports, they are reported to provide for the virtual elimination of the British imperial preference system.

The Geneva conference has also com-

pleted work on the charter of the International Trade Organization. The ITO is the last of the major international organizations set up to insure international economic cooperation. The charter will be presented to an international conference on Trade and Employment to be held at Havana in November. The charter establishes the rules under which international trade will be conducted in the future. Its primary objectives are to remove quantitative trade restrictions and to prohibit discrimination against particular countries in the application of trade controls. It calls upon all nations to reduce tariff barriers by mutual agreement and, with specified exceptions, provides for the elimination of other types of trade controls, such as quotas and exchange restrictions.

LABOR LEGISLATION IN 1947

Taft-Hartley Law

On June 23, 1947, Congress passed over the President's veto the "Labor Management Relations Act, 1947"—the first major legislation in the labor field since the National Labor Relations Act of 1935. Its purpose was to correct defects which had developed under the Wagner Act, and to equalize the bargaining power of employers and unions in view of the unions' tremendous growth in numbers and in economic strength.

Following are the significant provisions of the Taft-Hartley Law:

1. *National Labor Relations Board.* The new administrative agency consists of five members instead of the former Board of three. A new general counsel is invested with the authority to handle election and unfair labor practice proceedings.

2. *Union Security.* The closed shop is banned. The union shop and other forms of union security are closely regulated by means of NLRB conducted elections.

3. *Union Unfair Labor Practices.* For the first time unions are chargeable with unfair labor practices. These include coercion of employees in the choice of a bargaining agent; union attempts to discriminate against employees for dual union activities at permissible times; union refusal to bargain with an employer; and participation by the union in jurisdictional strikes or secondary boycotts.

4. *Suits Against Unions.* Unions may now be sued in federal courts, regardless of the amount involved and whether or not there is a diversity of citizenship. The principal basis of the suits are damages suffered as a result of violation of a collective bargaining agreement and of union

participation in jurisdictional strikes or secondary boycotts.

5. *Collective Bargaining.* Collective bargaining rights of employees guaranteed by the Wagner Act remain unchanged. But the obligations of employers are more closely specified. Employers are permitted to petition NLRB for elections where the believe, in good faith, that the union no longer represents a majority. Employees may petition for an election to have their union "decertified."

6. *Negotiations and Cooling-Off Period.* Unions and employers are not permitted to terminate or modify a contract without giving the other party 60 days' notice of such intention and without following certain notice and conference requirements.

7. *Freedom of Speech.* The right of an employer to state his views or arguments against unions is clarified by the new law. For instance, an employer may now make anti-union statements so long as they do not contain any threat of economic reprisal or offers of benefit.

8. *Supervisors.* Supervisors are denied the protections they formerly had under the Wagner Act. Employers are no longer required to bargain with supervisors' unions.

9. *National Emergency Strikes.* The Federal Government is authorized to protect the public where an industry-wide strike affects the national health and safety. Where there is a threat of such a strike, the President may direct the Attorney General to seek an injunction which may continue in force for as long as eighty days. Employees are given the opportunity to vote by secret ballot on acceptance or rejection of the employer's last offer of settlement.

UNION CONTRACTS 1946

PROPORTION OF WORKERS COVERED BY DIFFERENT TYPES OF UNION SECURITY

10. Checkoff. Deduction of union dues from the employee's pay is not permitted unless the employee gives written authorization.

Portal-to-Portal Act

A Supreme Court decision (Anderson v. Mt. Clemens Pottery Co.) awarding back pay and liquidated damages under the Wage-Hour Law, for time spent in non-productive preparatory operations not normally compensated, led to an avalanche of lawsuits against employers. By January

1947 litigated claims totaled well over six billion dollars.

These suits led to the passage of the Portal-to-Portal Act on May 14, 1947. The new law set a federal statute of limitations of two years for future wage suits, outlawed "portal" claims except where based on contract, custom or practice, and gave employers the right to rely on official rulings under the law, without the risk of being held liable if a court later ruled that the original government interpretation or ruling was erroneous.

Terms Used in Labor Relations

ARBITRATION—Referring disputes between employers and employees to the binding decision of impartial referees, arbitrators, or umpires.

BARGAINING UNIT—A group of employees composed of workers in a single craft, plant, company, area, or industry for purpose of bargaining collectively with their employer or employers. Such units may be determined by traditional grouping of workers, or by NLRB or a state labor relations board.

BOYCOTT—A concerted effort by a union to withhold or induce others to withhold the purchase of goods or services of an employer involved in a labor dispute. *Secondary boycotts* generally apply to union efforts to induce parties not directly involved in a labor dispute to refrain from patronizing the employer with whom the union has a labor dispute.

CERTIFICATION—An official order of the National Labor Relations Board, the National Mediation Board, or a state labor relations board specifying that a union is free from employer domination, includes a majority of the employees in an appropriate unit in its membership, and is authorized to act as the collective bargaining agent for all the employees in the unit.

CHECKOFF—Employer deduction of union dues from the pay envelope of union members and payment of the funds to the union.

CLOSED SHOP—An employer may hire only members of the contracting union who must continue to remain members in good standing to keep their jobs.

CLOSED UNION—A union which, through high initiation fees or restrictive membership rules, seeks to limit the size of its membership in order to protect their job opportunities. (See *Union shop*.)

COLLECTIVE BARGAINING—The process of negotiation between employer and union for the purpose of reaching an agreement as to the terms and conditions of employment for a specified period.

COMPANY UNION—An employee organization whose membership is limited to the

employees of a single plant or company. The term is frequently used to denote a company-dominated union, now illegal under the Wagner Act.

CRAFT UNION—Jurisdiction limited to one or several allied skilled trades.

EMPLOYEE WELFARE FUNDS—Funds consisting of employer or joint employer-employee contributions based upon percentage of payroll or number of units produced, used in behalf of union members for health insurance, hospitalization, vacations, disability, and retirement. Administration of the fund may be by union, employer, or jointly.

FEATHERBEDDING—Union work rules which limit output or utilization of manpower of machines.

ILLEGAL STRIKE—A work stoppage by union members in violation of a no-strike clause, or one which has not been properly voted upon or authorized by the proper union officials.

JURISDICTIONAL DISPUTE—A dispute between two or more unions over the right to organize the employees in a particular trade, industry or plant.

LOCKOUT—A shutdown of operations by an employer to secure acceptance of his terms or in protest against union demands.

MAINTENANCE OF MEMBERSHIP—Employees who are union members at the time the contract is signed and those who subsequently join the union must continue their membership as a condition of continued employment during the contract term.

MEDIATION—The process of attempting to reach a settlement or an agreement through the efforts of an outside person or agency such as the U. S. Conciliation Service.

OPEN SHOP—Union membership is not a condition of employment.

PICKETING—Stationing one or more persons of a labor organization at the plant gates or shop doors of an employer during a labor dispute for the purpose of informing the public generally and the employees that a dispute exists, persuading

workers to join or continue a strike, and preventing persons from entering or going to work. If large numbers participate in parading or walking up and down in front of the struck premises, this is known as *mass picketing*.

SENIORITY—Job rights based on length of service; measured in relation to other employees, to a particular job or to employment in a department, division, plant, or company.

SHOP STEWARD—A person elected by the employees within a plant or department to represent them in the adjustment of grievances with the employer.

STRIKE—A temporary work stoppage by employees as a form of economic pressure to enforce a demand for wage increases, improved working conditions, or to secure action on a grievance.

UNFAIR LABOR PRACTICES—*By employers.* (1) Interference by employer with, restraint, or coercion of employees in the exercise of their right to self-organization and collective bargaining. (2) Employer domination or interference with the formation or administration of any labor organization or grant of financial or other

support. (3) Discrimination in regard to hire or tenure of employment or any term or condition of employment by an employer in order to encourage or discourage membership in any labor organization. (4) The discharge or discrimination of an employee who files charges or gives testimony under the Act. (5) Refusal to bargain collectively with the representatives of employees.

By unions. (1) Restraining or coercing employees in the exercise of their Wagner Act rights. (2) Charging excessive initiation fees. (3) Persuading an employer to discriminate against employees. (4) Refusing to bargain collectively. (5) Participation in secondary boycotts and jurisdictional disputes. (6) Strikes by minority unions against certified unions. (7) Requiring payment for services not rendered. (8) Coercing an employer in his selection of his bargaining representatives.

UNION SECURITY—The closed or union shop or maintenance of membership. (See each term.)

UNION SHOP—All employees after hiring or within a specified period must become and remain members of a union.

PROPORTION OF WORKERS UNDER UNION CONTRACT IN 31 NON-MANUFACTURING INDUSTRIES

*Less than 1 percent

Source: Bureau of Labor Statistics

WORKMEN'S COMPENSATION—Insurance systems established by law in various states providing payment to workers who suffer physical injury during their course of employment, irrespective of carelessness of worker or negligence of employer.

YELLOW-DOG CONTRACT—An agree-

ment signed by an employee with his employer as a condition of employment, setting forth the employee's promise that he would not join a labor union or otherwise participate in any concerted action. Such contracts are now outlawed by the NLRB under the terms of the Wagner Act.

Directory of Government Labor Agencies

Department of Labor—Principal operating units are: The Bureau of Labor Statistics, Division of Labor Standards, Wage and Hour and Public Contracts Divisions, Women's Bureau. Principal offices—Labor Department Building, Constitution Avenue at 14th Street, Washington, D. C. Secretary of Labor, Lewis B. Schwellenbach.

1. Bureau of Labor Statistics: Acquires and distributes labor information and publishes the results of special studies on various aspects of the labor field, such as wages in different industries; effects of the war on employment, production, and labor conditions; productivity of labor and industry; and industrial relations. This information is issued in special bulletins and in the Monthly Labor Review. The Bureau main-

tains eight Regional Offices throughout the country with its principal office in the Labor Department Building, Washington, D. C.

2. Division of Labor Standards: Established in 1934 to develop desirable labor standards in industrial practice, labor law administration and labor legislation, and to make specific recommendations concerning methods and measures designed to improve the working conditions and the economic position of wage earners.

3. Wage and Hour and Public Contracts Divisions: Enforce minimum wage and overtime pay requirements of Federal laws.

4. Women's Bureau: Charged with formulating standards and policies for promoting the welfare of wage-earning women, im-

proving their working conditions, increasing their efficiency, and advancing their opportunities for profitable employment. Chief of the Women's Bureau is Frieda S. Miller, with offices in the Department of Labor Building, Washington, D. C.

Mediation and Conciliation Service—The Federal Mediation and Conciliation Service is an independent agency under the direction of a Federal Conciliation and Mediation Director appointed by the President with the advice and consent of the Senate. The main office of the Service is in the Department of Labor Building, Washington, D. C.

National Labor Relations Board—Principal office: Rochambeau Building, 815 Connecticut Avenue, N.W., Washington, D. C. The Taft-Hartley Law expanded the Board to five members: Paul M. Herzog, Chairman, John M. Houston and James J. Reynolds, Jr., all holdovers from the old NLRB. Additional members nominated for ap-

pointment by the President are J. Copeland Gray and Abe Murdock. The Board maintains 22 regional offices.

National Mediation Board—Composed of three members appointed by the President, not more than two of whom may belong to the same political party. The Board investigates disputes over representation and mediates disputes concerning changes in rates of pay, rules or working conditions of employees subject to the Railway Labor Act. The Board maintains its principal offices in the Federal Works Building, 18th and F Streets, N. W., Washington, D. C. The Board is composed of Harry H. Schwartz, George M. Cook, and Frank P. Douglass. (See *Labor Legislation*.)

National Railroad Adjustment Board—Settles grievances and disputes arising out of interpretation of agreements concerning pay, rules or working conditions.

The Chairman of this Board is C. E. Peck; the vice chairman is H. J. Carr.

Labor Organizations

THE AMERICAN FEDERATION OF LABOR

The American Federation of Labor was founded in 1881 as the Federation of Organized Trades and Labor Unions of the United States and Canada, changing its name in 1886. Its basic approach was to organize workers by crafts and skills, rather than by geographical area as was the practice of the Knights of Labor which the AFL was successful in replacing. The present organizational structure is practically identical with that set up under the leadership of Samuel Gompers, president of the Cigar Makers International Union. The AFL is financed by per capita dues from each of the affiliated international unions which are autonomous, self-governing bodies. The Federation, however, has authority to fix the jurisdiction of its affiliated internationals, though it is not always able to enforce decisions. Federation officers are elected by annual conventions. The governing body between conventions is the Executive Council, elected by the convention.

The AFL now consists of a little more than 100 international unions, claiming a membership of approximately 7,577,000. Its principal activities are to aid constituent unions in organizing and bargaining, to promote or oppose legislation, litigate test cases in court, watch interpretation and enforcement of laws, represent its affiliates in tripartite government agencies, and act for its membership in international bodies. It also operates through city and state federations, and through councils or departments of allied crafts. The AFL has refrained from tying itself up too closely with any political party or government administration. Most constituent AFL unions

are craft unions although a number are industrial. By extension into a number of industries some of the original craft unions have become mixed unions. The Brotherhood of Painters, Decorators, and Paper Hangers of America, AFL, is an illustration of a craft union whose jurisdiction includes building construction and maintenance work in establishments in many industries. The address of the American Federation of Labor is 901 Massachusetts Ave., N. W., Washington, D. C.

CONGRESS OF INDUSTRIAL ORGANIZATIONS

—The Congress of Industrial Organizations resulted from a split in the American Federation of Labor. In order to organize the mass production industries, leaders of the industrial unions within the AFL won approval at the Federation's San Francisco convention in 1934 of a resolution endorsing industrial unionism in the automobile, cement, aluminum, and other mass-

production industries. Failure of the AFL to organize the mass-production industries finally brought on a crisis at the 1935 convention at Atlantic City. Less than a month after this convention closed, led by John L. Lewis, Sidney Hillman, and David Dubinsky, the United Mine Workers, the Amalgamated Clothing Workers, the International Ladies Garment Workers Union, the United Textile Workers, the Oil Field, Gas and Refinery Workers, the International Union of Mine, Mill, and Smelter Workers founded the Committee for Industrial Organization. Other industrial unions shortly joined the Committee. In January, 1936, the Executive Council of the AFL ordered the CIO to dissolve and in August, upon its refusal to do so, suspended the ten unions. Disagreement on the desirability of reunification of labor led the ILGWU to return to the AFL, with John L. Lewis' UMW following suit later.

At present the Congress of Industrial Organizations includes more than 40 international unions with a claimed membership of 6,500,000. The CIO has emphasized legislation as an aid to organization and collective bargaining drives. It has also formed a Political Action Committee whose chief

purpose is to give systematic political support to candidates seeking public office whom it regards as pro-labor.

The CIO is financed by per capita dues from each of the affiliated international unions which are autonomous, self-governing bodies, as in the AFL. Unlike the AFL, however, the parent organization has greater influence over the decisions of the individual unions. The CIO is governed by a General Executive Board, consisting of a representative from each of the international unions. A smaller body of officers is elected by the annual convention. CIO headquarters are located at 718 Jackson Place, Washington 6, D. C.

¹Subject to decline in shipbuilding industry.

²Members do not lose good standing till they are nine months in arrears in dues.

³Includes members exonerated from dues: on strike, on sick leave, in armed services.

⁴Average for 1945. Membership lower at end of 1945. ⁵All active members.

⁶Includes members exonerated from dues. ⁷Includes 4-5,000 who were out of work because of illness, etc.

⁸Excludes 61,200 exonerated members and 66,900 in armed forces.

INDEPENDENT UNIONS—It is generally estimated that 2,000,000 workers are organized in independent unions, many of them operating only as company- or plant-wide unions. Some are loosely united in the Confederated Unions of America, whose central headquarters are located at 809 "I" Street, N. W., Washington, D. C. The most important of the independents, however, are organized much like the international unions of the AFL and CIO, some of them having withdrawn from the AFL.

1. Railroad Brotherhoods. The most prominent of the railroad unions are the four independent train service unions, commonly referred to as the "Brotherhoods." Labor organization in the railroads is predominantly along craft or occupational lines. The "Big Four" unaffiliated unions represent craft elements in the industry. They include the Brotherhood of Locomotive Firemen and Enginemen, Brotherhood of Railroad Trainmen, Grand International Brotherhood of Locomotive Engineers, and the Order of Railway Conductors of America. Membership figures for the "Big Four" unaffiliated unions are as follows: Railway Conductors—36,360; Locomotive Firemen and Enginemen—116,732; Railroad Trainmen—215,872; Locomotive Engineers—76,589. All told, however, there are about 1,400,000 employees on Class 1 railroads and some 23 so-called standard railroad unions. All except about 70,000 employees are covered by union agreements, so that approximately 95 percent were employed under contracts.

The railroad unions, except for the Railroad Trainmen and the Locomotive Engineers, attempt some form of united action through the Railway Labor Executives Assn., which includes some AFL unions.

2. International Association of Machinists. Claiming a membership of 625,000, was formerly affiliated with the AFL. After one withdrawal it was readmitted, during the 1944 convention, but withdrew again in 1946 as a result of a jurisdictional dispute

with the Brotherhood of Carpenters and the Sheet Metal Workers International Association. IAM Hqt. are at 9th St. and Mt. Vernon Pl., N. W., Washington, D. C.

3. Foreman's Association of America. Union membership of foremen received its impetus in the mass production industries. The organization of supervisors became an active issue after the effective organization of production workers by the newly organized industrial unions. In 1941, foremen from numerous Detroit automobile plants organized an independent union, the Foreman's Association of America, which later expanded its membership into other industries and areas. FAA obtained a contract from the Ford Motor Company in 1943 but met with resistance from other auto manufacturers. Organizational activities were aided by the decision of the National Labor Relations Board in 1945, holding that foremen were entitled to bargain collectively under the Wagner Act.

This trend was reversed by passage of the Taft-Hartley Law in June, 1947. By amendment of the Wagner Act, it eliminated supervisors from the statutory definition of employee, thereby denying organizational protection and mandatory collective bargaining rights to classes of supervisory employees. Shortly after this happened, FAA lost 13 of its chapters, including its largest group, at Packard. The union still claims 140 chapters. Its headquarters are located at 515 Barlum Tower, Detroit.

4. Communication Workers of America. This union was formerly the National Federation of Telephone Workers. The present group represents an attempt to create a more centrally organized union. The telephone strike in 1947 resulted in a split. The American Union of Telephone Workers (long lines) and some others formed the CIO Telephone Workers Organizing Committee. A few unions formerly affiliated with NFW are now affiliated with the International Brotherhood of Electrical Workers (AFL). Others remain independent.

State Labor Relations Laws

Anti-strike legislation was passed by a number of states in 1947 legislative sessions. Only three states dealt with the ordinary strike: Delaware, Michigan and Missouri require strike votes or notices. But jurisdictional strikes are banned or restricted in California, Iowa, Michigan, Missouri, Pennsylvania and Wisconsin. Sit-down strikes were prohibited by Delaware, South Dakota and Utah. Missouri and North Dakota forbade unions to engage in sympathy strikes. Public employees cannot strike in Michigan, Missouri, Nebraska, New York, Ohio, Pennsylvania and Texas, while Minnesota denied the right to employees of charitable hospitals. A number outlawed secondary boycotts: California,

Delaware, Idaho, Iowa, Minnesota, Missouri, North Dakota, Oregon, Pennsylvania, Texas and Utah. The right of a majority of employees to peacefully picket the employer's premises was not disturbed, except in the case of public employees or those working for public utilities. But these states made mass picketing illegal: Delaware, Georgia, Michigan, South Dakota, Texas and Utah. Violent picketing is banned in Georgia, Michigan and South Dakota. A minority union may not picket in Delaware, North Dakota or Utah; and "stranger" picketing is not allowed in Missouri, Pennsylvania, South Dakota and Texas. It is unlawful to picket the homes of employees in Connecticut and Michigan.

THE FEDERAL TAX SYSTEM

The Internal Revenue Code is the basic tax law of the Federal Government. Although it provides for many types of taxes such as gift, estate, manufacturers' excise, document, etc., its chief feature is the income tax, both individual and corporate.

Surtax net income				Surtax rates			
Not over \$2,000				17% of the surtax net income			
Over \$2,000 but not over \$4,000				\$340 + 19% of excess over \$2,000			
Over 4,000 " " " 6,000				720 + 23% " " " 4,000			
Over 6,000 " " " 8,000				1,180 + 27% " " " 6,000			
Over 8,000 " " " 10,000				1,720 + 31% " " " 8,000			
Over 10,000 " " " 12,000				2,340 + 35% " " " 10,000			
Over 12,000 " " " 14,000				3,040 + 40% " " " 12,000			
Over 14,000 " " " 16,000				3,840 + 44% " " " 14,000			
Over 16,000 " " " 18,000				4,720 + 47% " " " 16,000			
Over 18,000 " " " 20,000				5,660 + 50% " " " 18,000			
Over 20,000 " " " 22,000				6,660 + 53% " " " 20,000			
Over 22,000 " " " 26,000				7,720 + 56% " " " 22,000			
Over 26,000 " " " 32,000				9,960 + 59% " " " 26,000			
Over 32,000 " " " 38,000				13,500 + 62% " " " 32,000			
Over 38,000 " " " 44,000				17,220 + 66% " " " 38,000			
Over 44,000 " " " 50,000				21,180 + 69% " " " 44,000			
Over 50,000 " " " 60,000				25,320 + 72% " " " 50,000			
Over 60,000 " " " 70,000				32,520 + 75% " " " 60,000			
Over 70,000 " " " 80,000				40,020 + 78% " " " 70,000			
Over 80,000 " " " 90,000				47,820 + 81% " " " 80,000			
Over 90,000 " " " 100,000				55,920 + 84% " " " 90,000			
Over 100,000 " " " 150,000				64,320 + 86% " " " 100,000			
Over 150,000 " " " 200,000				107,320 + 87% " " " 150,000			
Over 200,000				150,820 + 88% " " " 200,000			

Individual Taxes

Individual tax rates for the calendar year 1947 are: normal tax at 3 percent, and surtax scaled from 17 percent to 88 percent in accordance with the above table.

The total of normal tax and surtax is reduced by 5 percent to give the actual tax due. For example, if the normal tax and surtax equal \$100, the taxpayer will pay \$100 less 5 percent, or \$95, not \$100.

(No individual need pay a total tax greater than 85.5 percent of his net income.)

Deductions:

In computing taxable net income, the taxpayer has the choice of using either the actual deductions incurred by him, such as: interest, taxes, contributions, etc., or the optional standard deduction. The optional deduction is used in place of actual deductions and amounts to roughly 10 percent of the taxpayer's income after business and employment expenses have been deducted. However, it may never exceed \$500.

Exemptions:

The same exemptions are allowed in calculating both the normal tax and the surtax. The taxpayer is entitled to a \$500 exemption for himself and each of his dependents. To claim someone as a depend-

ent you must furnish over half the money spent for his support, his taxable income must be less than \$500, and he must be closely related to you. These are considered "close" relatives:

Son and daughter (including an adopted child), grandchild, great-grandchild, etc.

Stepchild

Son-in-law and daughter-in-law

Parents, grandparents, etc.

Stepfather and stepmother

Father-in-law and mother-in-law

Brother, sister, half-brother, half-sister

Brother-in-law and sister-in-law

Uncle, aunt, nephew and niece (but not if related to you only by marriage)

The taxpayer's wife is entitled to a \$500 exemption for normal tax and for surtax, whether on a separate or a joint return. But the husband may claim his wife's \$500 exemption on *his separate return* if she has no income and is not claimed as a dependent by another taxpayer.

How income tax is collected:

To keep the collection of individual taxes on a current basis, two devices are used: (1) the withholding tax and (2) the declaration and payment of estimated tax. Withholding simply makes employers agents of the government in collecting taxes from employees. Through the use

of withholding tables, the tax on an employee's salary is roughly calculated. A proportionate amount of the tax is then deducted from each payment of salary to the employee. If at the end of the year, it appears that too much has been withheld, the employee gets a tax refund; if not enough has been withheld, the employee sends in the difference with his tax return.

Since the wage withholding method doesn't place on a current basis taxpayers receiving dividends, interest, profits from business, etc., and wage earners whose tax will exceed the amount withheld on wages, these taxpayers file a declaration at the beginning of the year estimating their current year's taxes and pay it in quarterly installments. Just as in the case of withholding, any overpayment or underpayment of tax is adjusted in the return covering the entire year.

Who must file a return:

If you've earned \$500 or more during the year you must file a return. This is required whether you're single, married, divorced, widowed or under 21. Also, if you earned less than \$500 but received other income from interest, dividends, rents, pensions, etc., which brings your income up to \$500, a return is required.

Members of the armed services below the rank of commissioned warrant officer do not include any of their military or naval pay in deciding whether to fill out a return. Officers exclude the first \$1,500 of service pay in deciding if they file.

What form to use:

FORM W-2. There are two possible forms—1040 or W-2. Form W-2 is the familiar withholding receipt. Any taxpayer may choose to use Form 1040, but only a taxpayer who meets certain requirements is eligible to use Form W-2. These requirements are as follows:

1. His total income must be less than \$5,000.
2. His income must be derived entirely from wages, dividends, or interest.
3. His income from sources other than wages subject to withholding must not exceed \$100.
4. His return must not be made for a fractional part of a year because of a change in accounting method.
5. He cannot be a nonresident alien.
6. He cannot claim special tax treatment because his income is mainly derived from sources within United States possessions.

If a husband and wife file a combined return on the withholding receipt, the combined income must meet the first three tests. If a wife files a separate withholding receipt, the husband must either use his

receipt as a return, use the tax table method of figuring the tax on the regular form, or use the optional standard deduction if his income is over \$5,000.

Taxpayers who are eligible to use Form W-2 need answer only a few simple questions appearing on it, and let the collector compute the actual amount of tax liability. This computation will be on the basis of the tax table which is part of Form 1040 and which automatically allows the standard deduction of approximately 10 percent. If any additional tax is due, the collector will send the taxpayer a bill for that amount. This bill must be paid within thirty days after it has been mailed by the collector. If the amount of taxes withheld from wages plus any amount paid as an estimated tax exceed the total tax due, then a refund will be sent.

If the taxpayer has received more than one receipt for income tax withheld during the year (either the old or the revised Form W-2), he must use the last one received as his return, and must attach the others to it. If a husband and wife file a combined return on Form W-2, all receipts which were given to both of them must be attached. If any receipt is missing and the taxpayer cannot obtain a duplicate from his employer, he must file a return on Form 1040.

FORM 1040. Every individual who does not meet *all* the requirements for using Form W-2, or who wants to make his own computations, must use Form 1040. If his adjusted gross income is less than \$5,000 (regardless of source), and if he meets requirements (4), (5), and (6) listed under Form W-2 (above), he may convert the form into a "short" form by tearing off pages 3 and 4, filing only pages 1 and 2. If he does so, he must use the tax table method of computing his tax liability.

Partnerships:

A partnership as such does not pay tax. Instead the individual partners pick up their share of the partnership net profit or loss and report it in their individual returns.

Estates and trusts:

Every fiduciary (except a receiver who is in possession of only part of an individual's property), or one or two or more joint fiduciaries must file a return for the following individuals, estates and trusts for which he acts:

- (a) Every individual whose gross income for the taxable year is \$500 or more;
- (b) Every estate which has a gross income of \$500 or more;
- (c) Every trust which has a *net* income of \$100 or more, or which has a *gross* income of \$500 or more;
- (d) Every estate or trust of which any beneficiary is a nonresident alien.

Corporation Taxes

Corporations are now subject to the following tax rates:

Earnings up to \$25,000

Normal tax	
First \$5,000	15%
Next 15,000	17%
Next 5,000	19%
Surtax	6%

Earnings between \$25,000 and \$50,000

Normal tax	\$4,250 plus 31% of normal tax net income over \$25,000
Surtax	\$1,500 plus 22% of surtax net income over \$25,000

Earnings over \$50,000

Normal tax	24%
Surtax	14%

There is no longer an excess profits tax, capital stock tax or declared value excess

profits tax. However, the 27½ percent-38½ percent penalty surtax on corporations which unreasonably accumulate earnings to avoid the surtax on individual stockholders is still in effect.

Gift Tax

Individuals who make gifts are subject to a gift tax based on the value of the property given. However, exemption is provided for a certain amount of gifts and the tax does not apply until the exemption is exceeded. The exemptions work this way:

During his lifetime, an individual may give away \$30,000 taxfree. In addition, the first \$3,000 of gifts made by him to each person in any one year is also exempt. For example, a taxpayer may give his wife and child \$3,000 apiece each year without incurring gift tax and without using up any of his \$30,000 lifetime exemption.

After deducting exemptions, the value of gifts is taxed at the following rates:

(A)	(B)	(C)	(D) Rate of tax on excess over amount in column (A) Percent
Amount of net gifts equaling—	Amount of net gifts not exceeding—	Tax on amount in column (A)	
.....	\$ 5,000	2¼
\$ 5,000	10,000	\$ 112.50	5¼
10,000	20,000	375.00	8¼
20,000	30,000	1,200.00	10½
30,000	40,000	2,250.00	13½
40,000	50,000	3,600.00	16½
50,000	60,000	5,250.00	18¾
60,000	100,000	7,125.00	21
100,000	250,000	15,525.00	22½
250,000	500,000	49,275.00	24
500,000	750,000	109,275.00	26¼
750,000	1,000,000	174,900.00	27¾
1,000,000	1,250,000	244,275.00	29¼
1,250,000	1,500,000	317,400.00	31½
1,500,000	2,000,000	396,150.00	33¾
2,000,000	2,500,000	564,900.00	36¾
2,500,000	3,000,000	748,650.00	39¾
3,000,000	3,500,000	947,400.00	42
3,500,000	4,000,000	1,157,400.00	44¼
4,000,000	5,000,000	1,378,650.00	47¼
5,000,000	6,000,000	1,851,150.00	50¼
6,000,000	7,000,000	2,353,650.00	52½
7,000,000	8,000,000	2,878,650.00	54¾
8,000,000	10,000,000	3,426,150.00	57
10,000,000	4,566,150.00	57¾

A gift tax return (Form 708) and payment of the tax are due on March 15th following the close of the calendar year in which the taxable gifts are made.

Integration of Gift and Estate Taxes

The gift tax was originally intended to complement and reinforce the estate tax. The idea was to place a tax on the transfers of property made during a taxpayer's lifetime, thereby counterbalancing the lower estate taxes to be collected from the smaller estate which would be left at the taxpayer's death. The Treasury feels that the gift tax has failed to accomplish this

purpose, largely because gift and estate taxes are applied as separate taxes. This permits the making of well-timed transfers of property which can substantially avoid both gift and estate taxes. The Treasury is seriously considering the complete integration of gift and estate taxes into a single tax with each gift during life being considered as part of the taxpayer's estate.

Estate Tax

The estate is based on the net value of an individual's property which is transferred to others as a result of his death. The calculation of the actual estate tax due is somewhat complicated by the necessity of figuring two separate taxes.

The net tax payable is: (1) the estate tax, consisting of (a) the gross tax computed under Schedule I less (b) the credits allowable against such tax, plus (2) the additional estate tax, consisting of (a) the tentative tax computed under Schedule II less (b) the credits allowable against such tentative tax:

(1) *The estate tax* (1926 Act as amended—specific exemption of \$100,000 in determining net estate).

(a) Schedule I:

	Percent
First \$50,000 of net estate	1
<i>In excess of</i>	
\$50,000 up to \$100,000	2

(b) Credits:

(1) The gross tax under Schedule I.

(2) The amount of gift taxes paid under the Gift Tax Act of 1932 on gifts by the decedent which must be included in his gross estate, not credited against the estate tax under Schedule I and not in excess of the proportion of the tentative tax under Schedule II less the gross tax under Schedule I which the value of the gift property bears to the gross estate.

If the gross estate of decedent dying after October 21, 1942, exceeds \$60,000 (insurance included), the legal representative is required to file notice within 2 months after qualification and to file a return within 15 months after decedent's death. Tax is due within 15 months after decedent's death on Form 706. Tax is to be paid by the legal representative out of estate funds. Taxes unpaid after 15 months from the date of death draw interest at 6 percent per annum, except that where an extension of time for payment is granted after March 31, 1938, interest begins to run 18 months after the date of death at 4 percent.

Excise Taxes

Manufacturers' excise taxes based upon the amount of sales made by a manufacturer are levied at the following rates:

Automobile truck chassis and bodies	5%
Passenger automobile chassis and bodies, including motorcycles	7%
Parts and accessories	5%
Firearms, shells and cartridges	11%
Gasoline, per gallon	1½¢

Excise Taxes—(cont.)

Tires, per lb.	5¢
Inner tubes, per lb.	9¢
Lubricating oils, per gallon	6¢
Matches	
fancy wooden, per 1,000	5½¢
ordinary, per 1,000	2¢
Mechanical refrigerators	10%
Pistols and revolvers	11%
Radio receiving sets and parts	10%
Sporting goods	10%
Electric, gas, and oil appliances	10%
Photographic apparatus	25%
Unexposed photographic films, plates and paper	15%
Business and store machines	10%
Electric light bulbs	20%

Retailers' excise taxes based on sales by retailers are levied as follows:

Jewelry	20%
Furs	20%
Toilet preparations	20%
Luggage, etc.	20%

Stamp taxes on original issue and transfer of securities are as follows:

Bonds	
issue, per \$100 face value or fraction	\$.11
transfer, per \$100 face value or fraction05

Stocks	
issue

Social Security

The Social Security Act, enacted August 14, 1935 and considerably broadened by amendments in 1939, established ten separate programs. Two programs are insurance systems involving pay-roll taxes: a federal system of old-age and survivors' insurance, and a federal-state system of unemployment insurance. The other eight programs involve federal grants-in-aid to the states for the needy aged, the needy blind, dependent children, maternal and child-health services, crippled-children services, child-welfare services, vocational rehabilitation, and public-health services.

The administration of the Act is largely the responsibility of the Federal Security Administrator. Within the Federal Security Agency, the Social Security Administration, headed by Commissioner for Social Security Arthur J. Altmeyer, handles old-age and survivors' insurance, certain unemployment-insurance functions, and the programs for assistance to the needy aged, children, and blind. The Children's Bureau, also part of the Federal Security Agency, administers the other children's services.

Until July 16, 1946, activities of the present Social Security Administration were carried out by the now-abolished Social Security Board, and the children's services were administered by the Children's Bureau as part of the Labor Department.

Old-Age and Survivors' Insurance

The old-age and survivors' insurance program began in 1937, although only old-

age lump-sum benefits were paid before 1940. It is the only wholly federal program.

Benefits

Benefits available to workers who are "fully insured" under the system are:

1. A monthly retirement benefit for a worker 65 or over.
2. A supplemental monthly benefit for a retired worker's wife, if she is 65 or over, and for his children, if under 18.
3. Monthly benefits to the following survivors of a deceased worker, regardless of his age at his death:
 - (a) Widow, if 65 or over.
 - (b) Widow at any age if she has dependent children in her care.
 - (c) Children, unmarried and under 18.
 - (d) Parents, if 65 or over and dependent on the deceased, but only if the worker dies leaving no widow or child entitled to benefits.

4. A lump-sum benefit, which is paid only if a worker dies leaving no widow, child, or parent entitled to monthly benefits at the time of the death. It is paid to the widow or widower, if he or she was living with the deceased at the time of death. If there is no such person, the persons paying the worker's burial expenses may be reimbursed for expenses paid. Lump-sum benefits can be paid under the above circumstances even if the worker was drawing old-age benefits before his death and his wife or child were also receiving benefits on his wages. Furthermore, the

lump sum is not in place of monthly benefits payable later to survivors and does not affect their rights to monthly benefits.

Workers who are not "fully" insured but are merely "currently" insured are entitled only to those benefits for survivors listed under 3 (b), 3 (c), and 4 above.

A worker is "fully" insured if he has been paid \$50 in taxable employment in each of 40 quarters, or if he has worked in taxable employment half the time after 1936 (or after becoming 21, if later) and before he reaches 65 or dies. (See Table 1A.)

A worker is "currently" insured if he has received wages of at least \$50 in taxable employment in at least 6 of the 13 calendar quarters preceding and including the quarter in which he died.

The amount of the worker's primary benefit—that paid to the worker when he reaches 65—is determined as follows:

(1.) Figure the worker's "average monthly wage" by dividing his total taxable wages by three times the quarters elapsed since January 1, 1937. (Since time elapsed is a factor, a person who has worked continuously in covered employment will receive a larger benefit than one who has worked in exempt employment part of the time or has been unemployed.)

(2.) Take 40% of the first \$50 of the average monthly wage and add to it 10% of the remainder (not exceeding \$200, however). Then add to this sum 1% for each year in which the worker received at least \$200 in covered employment. If the resulting sum is less than \$10, it is increased to \$10.

Example: A worker filing a claim in January 1946 was paid \$150 a month in covered employment for years 1937-40 and 1944-45. In years 1941-43 he worked on a farm in exempt employment. (1) His wages for the years 1937-40 and 1944-45 total \$10,800. This is divided by the number of months since 1937: 108. His average monthly wage is \$100. (2) To find his benefit amount take \$20 (40% of the first \$50 of his monthly wage) and add to it \$5 (10% of the remaining \$50) and to this total (\$25) add \$1.50 (1% of \$25, multiplied by 6). The benefit amount is \$26.50 per month.

Starting January, 1947, a benefit claim is considered filed as of the quarter which will yield the highest benefit. Also, it may be recomputed later to include subsequent earnings.

The amounts of other benefits are derived from the primary benefit as follows:

Wife: one-half of primary benefit.

Child: one-half of primary benefit.

Widow: three-quarters of primary benefit.

Parent: one-half of primary benefit.

Lump-sum benefit: 6 times the primary

benefit. (If paid to persons paying burial expenses, the benefit is limited to expenses incurred.)

Maximum total of benefits which may be paid on any one worker's wages is the least of the following: \$85; 80% of the worker's average monthly wage; or twice the primary benefit. If benefits are already \$20 or less, they will not be further reduced.

A person earning \$15 or more in a month in covered employment is not eligible for a benefit for that month. Benefits to a wife or child are also canceled during any month in which the insured worker earns \$15.

Application for benefits is made to the nearest field office of the Social Security Administration.

Rates and Coverage

All employers covered by the federal insurance contributions law are required to pay a 1% tax on wages paid to employees, and each employee also pays a 1% tax on his pay. Tax rates are scheduled to rise to 1½% in 1950 and to 2% in 1952. Previously scheduled increases ranging from rates of 1½% to 2½% have been voted down by Congress for 9 successive years, the rate remaining frozen at 1%.

Neither employer nor employee is required to pay tax on that part of a worker's pay which is over \$3,000 in any calendar year. If an employee does so because he worked for more than one employer, he may apply for a refund of excess tax at the end of the year.

The employee's tax is deducted by the employer and is paid over to the Internal Revenue Bureau at the end of each quarter together with the employer's tax. Although these taxes are initially paid into the Treasury, a corresponding amount is appropriated each year from the Treasury into the Old-Age and Survivors Insurance Trust Fund, from which benefits are paid.

An employer is liable for payment and deduction of tax as soon as he employs one employee. The length of employment and the number of employees is immaterial.

The following workers are exempt, and no tax is incurred on their wages: self-employed; agricultural labor; domestic service; casual labor not in the course of the employer's business; persons working for a son, daughter or spouse, or for a parent if the child is under 21; government employees (including United Nations, etc.); employees of nonprofit religious, charitable or educational organizations; railroad workers; certain employees of organizations exempt from income tax; student nurses and interns; workers on small fishing vessels; newsboys under 18.

4	63	31	4	83	40

¹All individuals attaining age 65 subsequent to January 1, 1957 will be required to have not less than 40 quarters of coverage.

²Not including quarter in which individual became 65 or died.

A worker is either completely exempt or completely covered by the law, depending on which type of work occupies more than half of the pay period. If work is equally divided, all his work is covered.

Veterans of World War II, who would not otherwise have received wage credits for their time in the service, were in 1946 voted special coverage in the event of death within 3 years after discharge. In such cases they are considered to have died fully insured, to have an average monthly wage of at least \$160, and to have had \$200 annual wages for each year of at least 30 days' active service.

Board Wage Records

Every employee must have a social security number. An account with the Social Security Administration is set up for each worker, and to this account are credited all wage payments reported. When a benefit claim is filed, these accounts are used to determine if the claimant is eligible for benefits and, if he is, the amount of the benefit to be paid.

By September, 1946, 71% of the population over 13 years of age held social security numbers.

Unemployment Compensation

Federal and state governments cooperate in the administration of the unemployment insurance program. The federal law, beginning with 1936, imposed an excise tax on employment and established the framework for the federal-state system. All states (including District of Columbia, Hawaii and Alaska) followed suit, most of them in 1936 and 1937. Benefits became payable in most states in 1938 and 1939. (Wisconsin was the only state to pass such a law earlier—taxes were first collected in July, 1934.)

Benefits

The state laws determine who shall receive unemployment benefits, in what amount, and under what conditions. The provisions vary in each state, but generally a person is entitled to benefits for any week during which he is totally or partly unemployed, provided he has earned a sufficient amount of wages from an employer subject to the state law, has filed a claim for benefits, has served a "waiting period" of one week or so, and is not disqualified.

Disqualification means that the payment of benefits is postponed for a certain number of weeks, or is suspended entirely, because the worker is in one of the following situations:

1. Not able to work—ill, aged or disabled to the point that he cannot perform any marketable services.
2. Not available for work—not willing to do work for which he is fitted by experi-

*Only lump-sum payments were made until 1940.

ence, education or training, or places unreasonable restrictions on hours, wages, shift or skill he will accept, with the result that he is not likely to find the job he wants. Many states also require him to be actually searching for a job.

3. Quit work—left his job voluntarily without good cause. "Good cause" is some sound reason which would impel an ordinarily prudent person to quit, such as an unreasonable increase of hours without a pay increase, a substantial reduction in wages, requirement of excessive unpaid overtime, a transfer to work which injures the person's health, an unreasonably heavy work quota, unjustified reprimands or abuse from superior, etc.

4. Discharged for misconduct—discharged because of conduct detrimental to his employer's interests—for example, refusal to obey orders, absence from work, tardiness, violation of employer's rules, intoxication at work, etc.

5. Refused job offer of suitable work without good cause—refused a job which is reasonably fitted to his training, experience, or skills, pays the prevailing wages for similar work, is not detrimental to his health or safety, has working conditions which are not substantially less favorable than those prevailing in similar work in the locality, and is within a reasonable distance from his home. If the job offer is suitable, the person is expected to accept it unless he has good cause for refusing, such as reasonably good prospects of employment elsewhere, unreasonable conditions required by employer, etc.

6. Involved in labor dispute. Even if the worker is not striking, he may be disqualified if he is a member of the union involved; or his wages, hours or working conditions will be affected by the outcome of the strike; or he serves on or refuses to cross picket lines; or engages in a sympathy strike. In almost all states benefits

cannot be paid as long as the dispute persists. Only states where strikers can receive benefits are: New York—after 7 weeks; Rhode Island—after 8 weeks.

Some state laws also disqualify workers who leave because of marriage, marital duties, pregnancy, to attend school, or who receive dismissal pay, vacation pay, workmen's compensation payments, or veterans' readjustment allowances.

A worker seeking unemployment benefits must file a claim at the local office of the state unemployment bureau and register for work with the employment service. At that time, a benefit year (usually the year running from the date of his claim) and a base period (usually the year ending from 3 to 6 months before the filing of his claim) are established for him. His benefit amount will be a percentage of the wages earned in his base period, but no more than the maximum amount allowed. He is entitled to draw benefits for the set number of weeks during the rest of that benefit year. When he has exhausted these benefits he will not be eligible again until he can establish a new benefit year for which he has the necessary base period wages.

An employee moving out of the state does not lose benefit rights earned under that state law. He merely files a claim for benefits at the local office in the state where he is now located and this office will

act as agent for the other state in paying him benefits.

Tax

An employer is generally liable for a maximum total tax of 3% of his pay roll—0.3% to the federal government and 2.7%, or less, to the state. Although the federal government itself technically levies a pay-roll tax of 3%, in practice this usually amounts to only 0.3% because the employer is allowed a credit of as much as 2.7% for taxes paid to the states. The federal tax goes into general revenues, from which funds are appropriated each year to the states to cover administrative costs. Taxes collected by the states are used solely for benefit payments.

Under the federal law, which is merely a taxing statute, the Treasury Department collects the tax, which is paid annually. The state laws, under which benefits are paid, are administered by the various state unemployment insurance agencies.

Only two states require contributions from employees in addition to those from employers: Ala.—the rate varies from 0.1% to 1.0% depending on the rate of the employer; N. J.—1%.

Merit Rating

All states, except Mississippi, collect unemployment taxes under "merit rating" systems. These systems allow tax rates lower than the usual standard rate of 2.7%

Missouri	20	20			

to those employers who have some success in stabilizing employment, provided they have paid the tax for 3 or 4 years. In most states low rates go to employers who have fewest ex-employees drawing unemployment benefits; in others, those employers benefit who have little or no decrease in pay roll.

The average tax rate in merit rating states in 1946 was 1.4%. During the years 1942-46, employers were saved over 2 billion dollars because of merit rating.

Coverage

Employers are liable for the federal tax if they have eight or more employees on some day of each of 20 weeks in a year.

State requirements for liability vary, ranging from eight employees in the state down to a single employee. An employer who has employees in several states may be subject to as many state laws.

Liability for both federal and state taxes is limited to the first \$3,000 of a worker's pay in a year.

Certain employees are exempt from tax under federal and most state laws and are not counted in determining whether an employer is subject to tax. These are self-employed, agricultural workers, domestic workers, members of a proprietor's immediate family, railroad workers, government employees, employees of nonprofit educational, charitable or religious organizations, insurance agents, newsboys under 18, student nurses and interns, and casual labor not in the course of an employer's business. Although maritime workers had previously been exempt under the federal law and in some states, the federal law was amended to include them as of July 1, 1946, and coverage is being simi-

larly extended in a growing number of states.

Public Assistance

Under the Social Security Act, federal grants are made to the states for public assistance to needy persons, provided the state plan for distribution of the aid has been approved by the federal government. All states and territories cooperate in old-age assistance plans; all but Alaska cooperate in plans for the needy blind; all but Nevada share in plans for needy children; all states and Puerto Rico have approved plans for maternal and child-health services, services for crippled children, and child-welfare services. Beginning January, 1947, grants for maternal and child-health services may be made to the Virgin Islands.

The federal contribution to the states, until October 1, 1946, was usually one-half of the monthly payment, up to the maximum fixed by federal law. Since that date, federal contributions for assistance to needy aged and the blind are: \$10 of the

first \$15 and 50% of any amount between \$15 and \$45. Federal contributions for dependent children are: \$6 of the first \$9 and 50% of the balance. The maximum payment to which the federal government will contribute for needy children is \$24 for the first child and \$15 for each additional child. Only those children are eligible who are under 18 (or under 18 and still at school) and who have been deprived of parental support or care and are living with a member of the family.

Under the \$40 maximum for old-age assistance in effect before October 1, 1946, the average payment varied considerably from state to state, ranging from \$10 to \$40.

Social Security for Railroad Workers

Social security for most workers in the railroad transportation industry is provided under a national system apart from that established by the Social Security Act. The Railroad Retirement Act was first passed in 1934, but was held unconstitutional by the Supreme Court. The present Act was passed in 1935 and was substantially amended in 1937 and again in 1946. It is administered by the Railroad Retirement Board.

Taxes supporting the system are collected under the Carriers Taxing Act by the Bureau of Internal Revenue. Taxes are levied on the first \$300 of monthly compensation, on both employers and employees at these rates: 1937-39: 2¾%; 1940-42: 3%; 1943-45: 3¼%; 1946: 3½%; 1947-48: 5¾%; 1949-51: 6%; 1952 on: 6¼%.

Benefits provided are: retirement benefits at 65 or over, and, under certain circumstances, 60; survivors' benefits; disability benefits.

Under the Railroad Insurance Act, also administered by the Railroad Retirement Board, railroad workers receive unemployment insurance, and after July 1, 1947, sickness compensation and maternity benefits.

Veterans' Benefits

Mustering-out pay

Veterans—except, in general, those ranking higher than Army captain or Navy lieutenant honorably let out after Pearl Harbor—get mustering-out pay as follows:

- \$100 for those who served less than 60 days.
- \$200 for those who served 60 days or more in continental United States.
- \$300 for those who served 60 days or more outside continental United States or in Alaska.

If a discharged veteran dies before receiving payment, distribution of mustering-out pay is limited to spouse, children, or parents, in that order.

Costs are paid by employers at a rate of 3% of pay roll up to \$300 a month per worker. Taxes are collected by the Board.

Federal Civil Service

The civil-service retirement system, first established in 1920, now provides a retirement system for almost all federal employees not under another plan. It provides for a retirement benefit at 70, or at 62 or 60 or 55, depending on the number of years' service; a disability retirement benefit; a deferred annuity for separated employees with 5 years' or more service when they reach the age of 55 or 62; refunds if service is less than 5 years; death benefit to a wife or dependent child in the amount of the worker's credit in the fund.

Employees contribute 5% of their pay, and this contribution is matched by the government.

Health Insurance

With the exception of state laws for sickness compensation in Rhode Island and California, health insurance is on a voluntary basis. An increasing number of companies have set up plans for their employees, either on their own or by signing up with an insurance company or nonprofit organization. Many unions have plans for their members, as do other private groups.

Popular fields for insurance are hospitalization costs, accident insurance, medical and surgical care, and pay for time lost through sickness.

More than 40,000,000 persons were covered under some form of health and accident insurance at the end of 1944. This is ten times the number covered in 1920. At the end of 1944, about 6,000,000 persons had some degree of prepaid medical care.

The largest of the nonprofit plans is the Blue Cross, whose 87 hospital-service plans have over 25,000,000 subscribers throughout the country.

Job reinstatement

The Selective Service Act expired March 31, 1947. However, Section 8, providing for re-employment of veterans inducted under it continued in effect. Any person who entered the service after the expiration of the draft law on March 31, 1947, is also considered entitled to his old job by virtue of the Service Extension Act of 1941. Both grant to all honorably discharged veterans:

1. Their old job back, or one of like seniority, status and pay.
2. Guarantee against discharge except for cause for one year after reinstatement.

During that time the veteran cannot be demoted nor can his job benefits be reduced.

Qualifications on job rights

The veteran must be reapplying for a job that was not temporary at the time he left it; the employer need not reinstate him if circumstances have so changed as to make rehiring impossible or unreasonable, or if a veteran is no longer qualified to perform his job; applications must be made within 90 days of discharge. A veteran may be laid off if work slackens.

How the veteran can enforce his rights

By suit in the U. S. District Court with the assistance of the U. S. Attorney.

National Guard, reserve officers, and retired personnel have Selective Service rights. Benefits are not limited to draftees—anyone, including WACS, WAVES, SPARS, and Marines (female), who entered active service after May 1, 1940, is covered.

Vocational rehabilitation

Vocational rehabilitation courses not exceeding 4 years and placement in suitable, gainful employment are available for any veteran who served on or after September 16, 1940, and was honorably discharged with a service-connected disability which can be overcome by training.

The Veterans Administration arranges for the training, pays for tuition and books and the veteran receives, in addition, training allowance added to his disability pension to achieve the following minimums for veterans with less than a 30% disability:

- \$105 per month, if without a dependent
- \$115 per month, if with a dependent, *plus*
- (a) \$10 for one child and \$7 for each additional child, and
- (b) \$15 for a dependent parent.

For veterans with a 30% or greater disability:

- \$115 per month, if without a dependent
- \$135 per month, if with a dependent
- plus \$20 for one child and \$15 for each additional child.

If the veteran's disability pension exceeds the above minimum he gets the larger amount. Once employed, his basic pension award will in no way be reduced because he has succeeded in overcoming his handicap.

Disability Pensions

Veterans having a 10 percent or more disability resulting from disease or injury incurred in or aggravated by war service are eligible to receive a pension if their separation from the service was not under dishonorable conditions. Pension rates vary from \$13.80 to \$138 per month, depending

on the extent of disability. Pension payments are "untouchable" in legal proceedings and may not be assigned. Pension awards are within the jurisdiction of the Veterans Administration. A veteran's widow and surviving children are also eligible to receive pension benefits.

Veterans preference

Veterans who have been separated from the service under honorable conditions must be given preference in certification for appointment, in appointment, in reinstatement, in re-employment and in retention in federal civil service positions. Specifically with respect to the positions of crier or bailiff in federal courts, the Court Crier or Bailiff Preference Act grants preference in appointment to veterans.

National Service Life Insurance

Persons in service and veterans who never owned any GI insurance, but who were in service between October 8, 1940 and September 2, 1945, are entitled to take out insurance in any amount between \$1,000 and \$10,000 in multiples of \$500. The insurance is on a five-year level premium term plan, and in the first instance is granted against the death of the insured while in service. It is convertible to ordinary life, 20- or 30-payment life, 20-year endowment or endowment at the age of 60 or 65, on any premium date after one year within the five-year term.

Veterans have the right to convert the insurance without medical examination, except (a) where necessary to determine whether the insured is totally disabled and (b) upon complete surrender of the policy while it is still in force. Reconversion may also be made to higher premium rate, or, upon proof of good health to a lower premium rate.

For insurance maturing on or after August 1, 1946, beneficiaries may be any person or persons, firm, corporation or any other legal entity individually or as trustee. Where no beneficiary has been designated, or where the beneficiary has died, payments are made to widow or widower, child or children (including adopted children), parents or brothers and sisters of the insured. Payment is made to the beneficiary in 36 monthly installments unless one of these options is elected instead: payment in one lump sum; payment in specified number (no less than 36) of monthly installments; payment in installments throughout life; refund life income. If the insured becomes disabled while in service the government assumes payment of the premiums for him.

Servicemen's Readjustment Act of 1944

The "GI Bill of Rights" applies to vet-

erans who served on or after September 16, 1940 or before July 25, 1947. It provides for hospitalization, education, loans, employment, and readjustment allowances.

Education

A veteran who has served 90 days or more since September 16, 1940 and before July 25, 1947 may avail himself of educational opportunities at government expense. He must start the course not later than 4 years after separation or 4 years after July 25, 1947, whichever is later. No training or education will be offered after July 25, 1956.

A veteran who qualifies is entitled to 12 months of education or its equivalent in part-time study plus additional time up to three years (a total of 4 years) in direct proportion to the time he spent in service. Therefore, a veteran with 32 months of service is entitled to 44 months of education or training.

The Veterans Administration will pay tuition and school fees up to a total of \$500 for each school year in attendance at an approved institution. No board, lodging, or other living or travel expenses are paid, but while at school the veteran is entitled to \$65 per month living allowance, and \$90 if he has dependents. Allowance will not be paid if the veteran is earning \$175 (if single) or \$200 (if he has dependents) in full- or part-time employment while he is attending school. Where the amount of his earnings is less than those ceilings, subsistence allowance payments will be made to bring the total up to the ceilings.

The veteran may elect any course of study if the school will accept him, and he must maintain satisfactory standing.

A veteran may also elect to take apprentice or on-the-job training in an industrial establishment. His earnings in training plus the government allowance cannot exceed \$175 a month if single, \$200 if he has dependents.

Loans to Veterans

Three types are available: 1. For purchase or construction of homes; 2. for purchase of farms and farm equipment; 3. for purchase of business and business property.

In all three types, eligibility requirements are that the veteran must have entered the armed service on or after September 16, 1940 and before July 25, 1947; he must have an honorable discharge after service of at least 90 days or a service-connected disability as reason for the discharge or release; application must be made within ten years after the end of the war.

The government will guarantee 50 percent of the loan—up to a maximum guaranty of \$2,000 on non-real-estate loans,

and \$4,000 on real-estate loans, or prorated portions on loans of both types or in combination. Proposed price must not exceed reasonable value as determined by an appraiser designated by the Administrator. Maximum interest rate is 4 percent. Terms of loans: (a) on farm realty—40 years; (b) other real estate—25 years; (c) non-real estate—10 years. (Under certain circumstances second loan guarantees may be undertaken with the approval of the Administrator.)

Home Loans

Proceeds must be used for purchase of property, construction or improvement costs—the property to be occupied by the veteran as his home. Mortgage amortization terms must be in proper proportion to the veteran's present and expected income and expenses.

Business loans

Business loans will be approved when they are to be used (a) for engaging in business or pursuing a gainful occupation; (b) for purchasing land, buildings, supplies, equipment, machinery, etc., for business; (c) for constructing or repairing real or personal property to be used in business; (d) for working capital.

There must be reasonable likelihood of success, as indicated by the veteran's ability and experience and the conditions under which he intends to conduct the business.

Farm Loans

Farm loans will be made to a veteran for purchase or repair of lands, machinery, equipment, livestock, etc., for farming.

The ability and experience tests are similar to those applying to business loans. Veteran must have reasonable prospect of success in farming.

Readjustment Allowance

This section of the GI Bill provides for payment of \$20 a week for a maximum of 52 weeks to unemployed veterans residing in the United States. It also provides for the payment to a partially-employed veteran whose weekly wages are less than \$23 of the sum of \$20 less the amount of his wages in excess of \$3. The veteran must be able to work, registered with a public employment office and must not be receiving an allowance through any other provision of the Act. A self-employed veteran earning less than \$100 per month is eligible for an allowance representing the difference between his net earnings and \$100. Allowances are available to an eligible veteran no later than 2 years after his discharge or two years after July 25, 1947, whichever is later.

Patents

The issuance of a patent is a contract between the United States government and the inventor which grants a monopoly on the manufacture, sale and proceeds of the invention exclusively to the inventor for a term not exceeding 17 years. To obtain the patent, the inventor must have produced some "new and useful art, machine, manufacture, or composition of matter, or some new and useful improvement thereof." In return for the monopoly or patent right, the inventor must present to the Patent Office full specifications and diagrams so that the invention or composition or process can be reproduced by other persons following the specifications. Should the inventor omit some point, however irrelevant, in his specifications or drawings in order to conceal his secret, the patent may be declared invalid.

An application for a patent must contain the following:

a petition, addressed to the commissioner of patents accompanied by a fee of \$30.00; a carefully prepared specification sheet describing the invention or composition; a drawing, if possible; a certified statement under oath that the applicant believes the invention to be new and that it was made or discovered by him. If the application is granted, the patent is awarded; an additional fee of \$30.00 is collected.

Applications are considered strictly in the order in which they are received. Patents are not granted for printed matter, for methods of doing business, or on devices for which claims contrary to natural laws are made. The applications for a perpetual motion machine are numerous but until a working model is presented that actually fulfills the conditions of the claim, no patent has been or will be issued.

(Public Law 220, approved July 23, 1947 and 380, Aug. 6, 1947.)

Copyrights

A copyright, international or national, is the right obtained by authors, musicians, radio-script writers, and artists of all mediums to prevent the reproduction of their works without their consent. The United States Constitution (Article I, Section 8) empowers Congress to "promote the progress of science and the useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries." The possession of a copyright prevents reproduction by writing, printing, copying or imitation of the copyrighted article. This includes such works as motion picture or stage plots, characters or settings, any type of script in whole or in part of a radio production. The term "writing" has been defined to include maps, charts, music, prints, engravings, drawings, paintings, designs, photographs, photoplays, radio scripts, legitimate stage plays as well as books or any form of written or printed matter.

The first copyright statute went into effect in 1790; the present law has been on the books since 1909 and was amended in

1912. A copyright is good for 28 years on application with a corresponding renewal right for another 28 years if the renewal application is made within one year of the date of expiration. The copyright of a book or similar publication is obtained by marking each book with the word "copyright" together with the name of the owner of the copyright and the year of publication. This appears on the title page or the one immediately after it. After publication the copyright must be registered by forwarding to the Register of Copyrights, Washington, D. C., a petition for a copyright, a fee of Two Dollars (\$2.00), two copies of the best edition of the book (to be deposited in the Library of Congress), and an affidavit that the typesetting, printing, and binding have been done within the United States.

Citizens of all countries which grant reciprocal copyrights to Americans, which include most of the important literate nations, may, by international agreement, obtain copyright protection in the United States. Americans likewise receive copyrights effective in these countries.

(Public Law 281, approved July 30, 1947.)

Trade-marks

A trade-mark may be defined as a word, letter, device, symbol, or some combination of these, used in connection with merchandise, and pointing distinctly to the origin or ownership of the article to which it is applied.

Certificates of registration of trade-marks are issued under the seal of the Patent Office and may be registered by the owner if domiciled within the United States, including all territory under the jurisdiction and control of the United States. An American citizen who resides in any foreign country which by treaty or law recipro-

cates similar privileges can register in the United States the trade-marks used in the products of the foreign factory.

General jurisdiction in trade-mark cases is given to the Federal Courts. Decisions of examiners on applications or oppositions are subject to appeal to the Commissioner of Patents, and from him to the Court of Appeals for the District of Columbia. In many cases, a trade-mark infringes unwittingly upon earlier trade-marks.

The maximum protection given by registration is 20 years, after which registration must again be made by application.

(Public Law 489, effective July 5, 1947.)

THE UNITED NATIONS

THE PAST YEAR

by TRYGVE LIE

Secretary General of the United Nations

THE UNITED NATIONS is rapidly maturing into a fully functioning organization. In no other year in history have the representatives of nations met together more frequently, or worked more intensively on so many and such diverse matters. During the period from July 1, 1946 to June 30, 1947, the General Assembly held 443 plenary and committee meetings, the Security Council 347, the Economic and Social Council 168, the Trusteeship Council 56, and other United Nations bodies 897 meetings. In addition, there were numerous meetings of specialized agencies, general international conferences and meetings among groups of States.

These figures are of major significance in two respects. On the one hand, they reflect the large number and the complexity of the problems which the world faces today. On the other hand, they show a heartening willingness on the part of governments to rely increasingly on processes of international organization for the exploration and solution of problems of common concern.

The developments of the year, however, have revealed certain disturbing tendencies. In a number of instances in which a decision was taken on a general principle of considerable importance, the actual carrying out of the principle has been delayed or frustrated by the unwillingness of governments to take the necessary steps, or by their inability to agree on practical measures for execution.

The Atomic Energy Commission has worked hard and made some progress, but the complexity of the problem still presents many points of disagreement and delay. The Commission on Conventional Armaments has made little progress beyond the adoption of a general plan of work. Thus, the two most significant resolutions of the General Assembly still require positive implementation.

Nations are beset with the critical problems of relief, of economic reconstruction and social rehabilitation, and of defining human rights and raising standards of living, and many other questions.

All this cannot, in the main, be ascribed to the economic dislocation and instability resulting from the war, though these factors are even more serious now than a year ago. It arises in large measure from a basic political situation which underlies and affects all international political, economic and social activity. I hold it to be my duty to call attention to this situation as it affects the United Nations.

The world political situation has not improved in the last year, in spite of the fact that conditions at the beginning of 1947 appeared more hopeful after the great Powers had shown, in the General Assembly, a determination to seek agreement among themselves. Of outstanding significance, is the fact that the main peace treaties still remain undrafted and unsigned, and that no agreement has yet been reached even on some of their fundamental principles.

Important, however, as are the peace treaties, events have shown that the problem which they present is, in turn, part of a larger political complex which operates to delay and frustrate this endeavor as it has operated in some of the affairs of the United Nations. Though the drafting and conclusion of the treaties must remain a responsibility of the Powers which fought the war, the basic problem which delays their conclusion is worldwide in character. It is now apparent that while the nations directly responsible for the conclusion of the peace treaties continue their efforts, it is also necessary for all of us to apply ourselves seriously—through every means available to us—to a more general effort to explore and resolve the fears and conflicting interests which are at the root of our difficulties.

It is often, all too often, said that we are heading towards a new disaster. It is far less often said that the situation is also potentially very promising and that we can, if we all strive for it, move quickly and steadily towards a new era of peace, prosperity and civilization.

I do not believe that this present world

situation is as threatening as it is often made out to be. I am convinced that no responsible statesman in any country can, or does, contemplate the prospect of war.

It is evident that, in the past year, the United Nations has made great strides in setting up international machinery for the handling of world political, economic and social problems. The structure of this machinery is almost complete; its shape and design are well defined. It is now possible to say that, with the cooperation of the

Member Governments, the United Nations is equipped to undertake responsibility for the handling of problems in these fields.

Now, more than ever before, every nation has a vital stake in the establishment of a stable and prosperous international order. I am more than ever convinced that the United Nations can, and should, be a place where the combined common sense and determination of the peoples will find its voice and take a real part in the framing of the future of mankind.

THE 57 UNITED NATIONS

(As of Oct. 31, 1947)

Twenty-six nations at war against the Axis signed the original Declaration by United Nations at Washington on January 1, 1942. Members admitted later are shown in *italics* with the year of their admission.

Members of the Security Council are indicated by the letters SC followed by the year their membership expires.

Members of the Economic and Social Council are indicated by the letters ESC followed by the year membership expires.

Nations which were at any time members of the League of Nations are indicated by the letters L; if they ceased to be members, this fact is indicated either by *withdrew* or *expelled*.

CHARTER OF THE UNITED NATIONS

WE, the peoples of the United Nations Determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and

To reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small, and

To establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintained, and

To promote social progress and better standards of life in larger freedom, and for these ends

To practice tolerance and live together in peace with one another as good neighbors, and

To unite our strength to maintain international peace and security, and

To insure, by the acceptance of principles and the institution of methods, that armed force shall not be used, save in the common interest, and

To employ international machinery for the promotion of the economic and social advancement of all peoples, have resolved to combine our efforts to accomplish these aims.

Accordingly, our respective governments, through representatives assembled in the city of San Francisco, who have exhibited their full powers found to be in good and due form, have agreed to the present Charter of the United Nations and do hereby establish an international organization to be known as the United Nations.

CHAPTER I

Purposes and Principles

Article 1

The purposes of the United Nations are:

1. To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace;

2. To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;

3. To achieve international cooperation in solving international problems of an economic, social, cultural or humanitarian

character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language or religion; and

4. To be a center for harmonizing the actions of nations in the attainment of these common ends.

Article 2

The organization and its members, in pursuit of the purposes stated in Article 1, shall act in accordance with the following principles:

1. The organization is based on the principle of the sovereign equality of all its members.

2. All members, in order to ensure to all of them the rights and benefits resulting from membership, shall fulfill in good faith the obligations assumed by them in accordance with the present Charter.

3. All members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

4. All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations.

5. All members shall give the United Nations every assistance in any action it takes in accordance with the present Charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action.

6. The organization shall ensure that states not members of the United Nations act in accordance with these principles so far as may be necessary for the maintenance of international peace and security.

7. Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the members to submit such matters to settlement under the present Charter; but this principle shall not prejudice the application of enforcement measures under Chapter VII.

CHAPTER II

Membership

Article 3

The original members of the United Nations shall be the states which, having participated in the United Nations Conference on International Organization at San Francisco, or have previously signed

the Declaration by United Nations of Jan. 1, 1942, sign the present Charter and ratify it in accordance with Article 110.

Article 4

1. Membership in the United Nations is open to all other peace-loving states which accept the obligations contained in the present Charter and, in the judgment of the organization, are able and willing to carry out these obligations.

2. The admission of any such state to membership in the United Nations will be effected by a decision of the General Assembly upon the recommendation of the Security Council.

Article 5

A member of the United Nations against which preventive or enforcement action has been taken by the Security Council may be suspended from the exercise of the rights and privileges of membership by the General Assembly upon the recommendation of the Security Council. The exercise of these rights and privileges may be restored by the Security Council.

Article 6

A member of the United Nations which has persistently violated the principles contained in the present Charter may be expelled from the organization by the General Assembly upon the recommendation of the Security Council.

CHAPTER III

Organs

Article 7

1. There are established as the principal organs of the United Nations: A General Assembly, a Security Council, an Economic and Social Council, a Trusteeship Council, an International Court of Justice and a Secretariat.

2. Such subsidiary organs as may be found necessary may be established in accordance with the present Charter.

Article 8

The United Nations shall place no restrictions on the eligibility of men and women to participate in any capacity and under conditions of equality in its principal and subsidiary organs.

CHAPTER IV

The General Assembly

Composition

Article 9

The General Assembly shall consist of all the members of the United Nations.

Each member shall not have more than five representatives in the General Assembly.

Functions and Powers

Article 10

The General Assembly may discuss any questions or any matters within the scope of the present Charter or relating to the powers and functions of any organs provided for in the present Charter, and, except as provided in Article 12, may make recommendations to the members of the United Nations or to the Security Council, or to both, on any such questions or matters.

Article 11

1. The General Assembly may consider the general principles of cooperation in the maintenance of international peace and security, including the principles governing disarmament and the regulation of armaments, and may make recommendations with regard to such principles to the members or to the Security Council or to both.

2. The General Assembly may discuss any questions relating to the maintenance of international peace and security brought before it by any member of the United Nations, or by the Security Council, or by a state, which is not a member of the United Nations, in accordance with Article 35, Paragraph 2, and, except as provided in Article 12, may make recommendations with regard to any such questions to the state or states concerned or to the Security Council, or both. Any such question on which action is necessary shall be referred to the Security Council by the General Assembly either before or after discussion.

3. The General Assembly may call the attention of the Security Council to situations which are likely to endanger international peace and security.

4. The powers of the General Assembly set forth in this Article shall not limit the general scope of Article 10.

Article 12

1. While the Security Council is exercising in respect of any dispute or situation the functions assigned to it in the present Charter, the General Assembly shall not make any recommendation with regard to that dispute or situation unless the Security Council so requests.

2. The Secretary-General, with the consent of the Security Council, shall notify the General Assembly at each session of any matters relative to the maintenance of international peace and security which are being dealt with by the Security Council and shall similarly notify the General Assembly, or the members of the United Na-

tions if the General Assembly is not in session, immediately the Security Council ceases to deal with such matters.

Article 13

1. The General Assembly shall initiate studies and make recommendations for the purpose of:

(a) Promoting international cooperation in the political field and encouraging the progressive development of international law and its codification;

(b) Promoting international cooperation in the economic, social, cultural, educational and health fields and assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language or religion.

2. The further responsibilities, functions and powers of the General Assembly with respect to matters mentioned in Paragraph 1(b) above are set forth in Chapters IX and X.

Article 14

Subject to the provisions of Article 12, the General Assembly may recommend measures for the peaceful adjustment of any situation, regardless of origin, which it deems likely to impair the general welfare or friendly relations among nations, including situations resulting from a violation of the provisions of the present Charter setting forth the purposes and principles of the United Nations.

Article 15

1. The General Assembly shall receive and consider annual and special reports from the Security Council; these reports shall include an account of the measures that the Security Council has decided upon or taken to maintain international peace and security.

2. The General Assembly shall receive and consider reports from the other organs of the United Nations.

Article 16

The General Assembly shall perform such functions with respect to the international trusteeship system as are assigned to it under Chapters XII and XIII, including the approval of the trusteeship agreements for areas not designated as strategic.

Article 17

1. The General Assembly shall consider and approve the budget of the organization.

2. The expenses of the organization shall be borne by the members as apportioned by the General Assembly.

3. The General Assembly shall consider and approve any financial and budgetary arrangements with specialized agencies re-

ferred to in Article 57 and shall examine the administrative budgets of such specialized agencies with a view to making recommendations to the agencies concerned.

Voting

Article 18

1. Each member of the General Assembly shall have one vote.

2. Decisions of the General Assembly on important questions shall be made by a two-thirds majority of the members present and voting. These questions shall include: recommendations with respect to the maintenance of international peace and security, the election of the non-permanent members of the Security Council, and election of the members of the Economic and Social Council, the election of members of the Trusteeship Council in accordance with Paragraph 1(c) of Article 86, the admission of new members to the United Nations, the suspension of the rights and privileges of membership, the expulsion of members, questions relating to the operation of the trusteeship system, and budgetary questions.

3. Decisions on other questions, including the determination of additional categories of questions to be decided by a two-thirds majority, shall be made by a majority of the members present and voting.

Article 19

A member of the United Nations which is in arrears in the payment of its financial contributions to the organization shall have no vote in the General Assembly if the amount of its arrears equals or exceeds the amount of the contributions due from it for the preceding two full years. The General Assembly may, nevertheless, permit such a member to vote if it is satisfied that the failure to pay is due to conditions beyond the control of the member.

Procedure

Article 20

The General Assembly shall meet in regular annual sessions and in such special sessions as occasion may require. Special sessions shall be convoked by the Secretary-General at the request of the Security Council or of a majority of the members of the United Nations.

Article 21

The General Assembly shall adopt its own rules of procedure. It shall elect its president for each session.

Article 22

The General Assembly may establish such subsidiary organs as it deems necessary for the performance of its functions.

CHAPTER V**The Security Council****Composition****Article 23**

1. The Security Council shall consist of eleven members of the United Nations. The Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, shall be permanent members of the Security Council. The General Assembly shall elect six other members of the United Nations to be non-permanent members of the Security Council, due regard being specially paid, in the first instance to the contribution of members of the United Nations to the maintenance of international peace and security and to the other purposes of the organization, and also to equitable geographical distribution.

2. The non-permanent members of the Security Council shall be elected for a term of two years. In the first election of the non-permanent members, however, three shall be chosen for a term of one year. A retiring member shall not be eligible for immediate re-election.

3. Each member of the Security Council shall have one representative.

Functions and Powers**Article 24**

1. In order to insure prompt and effective action by the United Nations, its members confer on the Security Council primary responsibility for the maintenance of international peace and security, and agree that in carrying out its duties under this responsibility the Security Council acts on their behalf.

2. In discharging these duties the Security Council shall act in accordance with the purposes and principles of the United Nations. The specific powers granted to the Security Council for the discharge of these duties are laid down in Chapters VI, VII, VIII and XII.

3. The Security Council shall submit annual and, when necessary, special reports to the General Assembly for its consideration.

Article 25

The members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter.

Article 26

In order to promote the establishment and maintenance of international peace and security with the least diversion for armaments of the world's human and eco-

nomic resources, the Security Council shall be responsible for formulating, with the assistance of the Military Staff Committee, referred to in Article 47, plans to be submitted to the members of the United Nations for the establishment of a system for the regulation of armaments.

Voting**Article 27**

1. Each member of the Security Council shall have one vote.

2. Decisions of the Security Council on procedural matters shall be made by an affirmative vote of seven members.

3. Decisions of the Security Council on all other matters shall be made by an affirmative vote of seven members including the concurring votes of the permanent members; provided that, in decisions under Chapter VI and under Paragraph 3 of Article 52 a party to a dispute shall abstain from voting.

Procedure**Article 28**

1. The Security Council shall be so organized as to be able to function continuously. Each member of the Security Council shall for this purpose be represented at all times at the seat of the organization.

2. The Security Council shall hold periodic meetings at which each of its members may, if it so desires, be represented by a member of the government or by some other specially designated representative.

3. The Security Council may hold meetings at such places other than the seat of the organization as in its judgment will best facilitate its work.

Article 29

The Security Council may establish such subsidiary organs as it deems necessary for the performance of its functions.

Article 30

The Security Council shall adopt its own rules of procedure, including the method of selecting its president.

Article 31

Any member of the United Nations which is not a member of the Security Council may participate, without vote, in the discussion of any question brought before the Security Council whenever the latter considers that the interests of that member are specially affected.

Article 32

Any member of the United Nations which is not a member of the Security Council or

any state which is not a member of the United Nations, if it is a party to a dispute under consideration by the Security Council, shall be invited to participate, without vote, in the discussion relating to the dispute. The Security Council shall lay down such conditions as it deems just for the participation of a state which is not a member of the United Nations.

CHAPTER VI

Pacific Settlement of Disputes

Article 33

1. The parties to any dispute, the continuance of which is likely to endanger the maintenance of international peace and security, shall, first of all, seek a solution by negotiation, inquiry, mediation, conciliation, arbitration, judicial settlement, resort to regional agencies or arrangements, or other peaceful means of their own choice.

2. The Security Council shall, when it deems necessary, call upon the parties to settle their dispute by such means.

Article 34

The Security Council may investigate any dispute, or any situation which might lead to international friction or give rise to a dispute, in order to determine whether the continuance of the dispute or situation is likely to endanger the maintenance of international peace and security.

Article 35

1. Any member of the United Nations may bring any dispute or any situation of the nature referred to in Article 34 to the attention of the Security Council or of the General Assembly.

2. A state which is not a member of the United Nations may bring to the attention of the Security Council or of the General Assembly any dispute to which it is a party if it accepts in advance, for the purposes of the dispute, the obligations of pacific settlement provided in the present Charter.

3. The proceedings of the General Assembly in respect of matters brought to its attention under this Article will be subject to the provisions of Articles 11 and 12.

Article 36

1. The Security Council may, at any stage of a dispute of the nature referred to in Article 33 or of a situation of like nature, recommend appropriate procedures or methods of adjustment.

2. The Security Council should take into consideration any procedures for the settlement of the dispute which have already been adopted by the parties.

3. In making recommendations under this Article the Security Council should also take into consideration that legal disputes should as a general rule be referred by the parties to the International Court of Justice in accordance with the provisions of the statute of the Court.

Article 37

1. Should the parties to a dispute of the nature referred to in Article 33 fail to settle it by the means indicated in that Article, they shall refer it to the Security Council.

2. If the Security Council deems that the continuance of the dispute is in fact likely to endanger the maintenance of international peace and security, it shall decide whether to take action under Article 36 or to recommend such terms of settlement as it may consider appropriate.

Article 38

Without prejudice to the provisions of Articles 33 to 37 the Security Council may, if all the parties to any dispute so request, make recommendations to the parties with a view to a pacific settlement of the dispute.

CHAPTER VII

Action with Respect to Threats to the Peace, Breaches of the Peace, and Acts of Aggression

Article 39

The Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with Articles 41 and 42, to maintain or restore international peace and security.

Article 40

In order to prevent an aggravation of the situation, the Security Council may, before making the recommendations or deciding upon the measures provided for in Article 39, call upon the parties concerned to comply with such provisional measures as it deems necessary or desirable. Such provisional measures shall be without prejudice to the rights, claims, or position of the parties concerned. The Security Council shall duly take account of failure to comply with such provisional measures.

Article 41

The Security Council may decide what measures not involving the use of armed force are to be employed to give effect

to its decisions, and it may call upon members of the United Nations to apply such measures. These may include complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communication, and the severance of diplomatic relations.

Article 42

Should the Security Council consider that measures provided for in Article 41 would be inadequate, or have proved to be inadequate, it may take such action by air, sea or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea or land forces of members of the United Nations.

Article 43

1. All members of the United Nations, in order to contribute to the maintenance of international peace and security, undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security.

2. Such agreement or agreements shall govern the numbers and types of forces, their degree of readiness and general location, and the nature of the facilities and assistance to be provided.

3. The agreement or agreements shall be negotiated as soon as possible on the initiative of the Security Council. They shall be concluded between the Security Council and members or between the Security Council and groups of members and shall be subject to ratification by the signatory states in accordance with their respective constitutional processes.

Article 44

When the Security Council has decided to use force it shall, before calling upon a member not represented on it to provide armed forces in fulfillment of the obligations assumed under Article 43, invite that member, if the member so desires, to participate in the decisions of the Security Council concerning the employment of contingents of that member's armed forces.

Article 45

In order to enable the United Nations to take urgent military measures, members shall hold immediately available national air force contingents for combined international enforcement action. The strength and degree of readiness of these contingents and plans for their combined action shall be determined, within the limits

laid down in the special agreement or agreements referred to in Article 43, by the Security Council with the assistance of the Military Staff Committee.

Article 46

Plans for the application of armed force shall be made by the Security Council with the assistance of the Military Staff Committee.

Article 47

1. There shall be established a Military Staff Committee to advise and assist the Security Council on all questions relating to the Security Council's military requirements for the maintenance of international peace and security, the employment and command of forces placed at its disposal, the regulation of armaments, and possible disarmament.

2. The Military Staff Committee shall consist of the Chiefs of Staff of the permanent members of the Security Council or their representatives. Any member of the United Nations not permanently represented on the Committee shall be invited by the Committee to be associated with it when the efficient discharge of the Committee's responsibilities requires the participation of that member in its work.

3. The Military Staff Committee shall be responsible, under the Security Council, for the strategic direction of any armed forces placed at the disposal of the Security Council. Questions relating to the command of such forces shall be worked out subsequently.

4. The Military Staff Committee, with the authorization of the Security Council and after consultation with appropriate regional agencies, may establish regional subcommittees.

Article 48

1. The action required to carry out the decisions of the Security Council for the maintenance of international peace and security shall be taken by all the members of the United Nations, or by some of them, as the Security Council may determine.

2. Such decisions shall be carried out by the members of the United Nations directly and through their action in the appropriate international agencies of which they are members.

Article 49

The members of the United Nations shall join in affording mutual assistance in carrying out the measures decided upon by the Security Council.

Article 50

If preventive or enforcement measures against any state are taken by the Security Council, any other state, whether a

member of the United Nations or not, which finds itself confronted with special economic problems arising from the carrying out of those measures shall have the right to consult the Security Council with regard to a solution of those problems.

Article 51

Nothing in the present Charter shall impair the inherent right of individual or collective self-defense, if an armed attack occurs against a member of the United Nations, until the Security Council has taken the measures necessary to maintain international peace and security. Measures taken by members in the exercise of this right of self-defense shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security.

CHAPTER VIII

Regional Arrangements

Article 52

1. Nothing in the present Charter precludes the existence of regional arrangements or agencies for dealing with such matters relating to the maintenance of international peace and security as are appropriate for regional action, provided that such arrangements or agencies and their activities are consistent with the purposes and principles of the organization.

2. The members of the United Nations entering into such arrangements or constituting such agencies shall make every effort to achieve pacific settlement of local disputes through such regional arrangements or by such regional agencies before referring them to the Security Council.

3. The Security Council shall encourage the development of pacific settlement of local disputes through such regional arrangements or by such regional agencies either on the initiative of the states concerned or by reference from the Security Council.

4. This Article in no way impairs the application of Articles 34 and 35.

Article 53

1. The Security Council shall, where appropriate, utilize such regional arrangements or agencies for enforcement action under its authority. But no enforcement action shall be taken under regional arrangements or by regional agencies without the authorization of the Security Council, with the exception of measures against any enemy state, as defined in Para-

graph 2 of this Article, provided for pursuant to Article 107, or in regional arrangements directed against renewal of aggressive policy on the part of any such state, until such time as the organization may, on request of the governments concerned, be charged with the responsibility for preventing further aggression by such a state.

2. The term enemy state as used in Paragraph 1 of this Article applies to any state which during the second World War has been an enemy of any signatory of the present Charter.

Article 54

The Security Council shall at all times be kept fully informed of activities undertaken, or in contemplation, under regional arrangements or by regional agencies for the maintenance of international peace and security.

CHAPTER IX

International Economic and Social Cooperation

Article 55

With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, the United Nations shall promote:

(a) Higher standards of living, full employment, and conditions of economic and social progress and development;

(b) Solutions of international economic, social, health, and related problems; and international cultural and educational cooperation; and

(c) Universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

Article 56

All members pledge themselves to take joint and separate action in cooperation with the organization for the achievement of the purposes set forth in Article 55.

Article 57

1. The various specialized agencies, established by inter-governmental agreement and having wide international responsibilities, as defined in their basic instruments in economic, social, cultural, educational, health and related fields, shall be brought into relationship with the United Nations in accordance with the provisions of Article 63.

2. Such agencies thus brought into relationship with the United Nations are

hereinafter referred to as specialized agencies.

Article 58

The organization shall make recommendations for the coordination of the policies and activities of the specialized agencies.

Article 59

The organization shall, where appropriate, initiate negotiations among the states concerned for the creation of any new specialized agencies required for the accomplishment of the purposes set forth in Article 55.

Article 60

Responsibility for the discharge of the functions of the organization set forth in this Chapter shall be vested in the General Assembly and, under the authority of the General Assembly, in the Economic and Social Council, which shall have for this purpose the powers set forth in Chapter X.

CHAPTER X

Economic and Social Council

Composition

Article 61

1. The Economic and Social Council shall consist of eighteen members of the United Nations elected by the General Assembly.

2. Subject to the provisions of Paragraph 3, six members of the Economic and Social Council shall be elected each year for a term of three years. A retiring member shall be eligible for immediate re-election.

3. At the first election, eighteen members of the Economic and Social Council shall be chosen. The term of office of six members so chosen shall expire at the end of one year, and of six other members at the end of two years, in accordance with arrangements made by the General Assembly.

4. Each member of the Economic and Social Council shall have one representative.

Functions and Powers

Article 62

1. The Economic and Social Council may make or initiate studies and reports with respect to international economic, social, cultural, educational, health, and related matters and may make recommendations with respect to any such matters to the General Assembly, to the members of the United Nations, and to the specialized agencies concerned.

2. It may make recommendations for the purpose of promoting respect for, and observance of, human rights and fundamental freedoms for all.

3. It may prepare draft conventions for submission to the General Assembly, with respect to matters falling within its competence.

4. It may call, in accordance with the rules prescribed by the United Nations, international conferences on matters falling within its competence.

Article 63

1. The Economic and Social Council may enter into agreements with any of the agencies referred to in Article 57, defining the terms on which the agency concerned shall be brought into relationship with the United Nations. Such agreements shall be subject to approval by the General Assembly.

2. It may coordinate the activities of the specialized agencies through consultation with and recommendations to such agencies and through recommendations to the General Assembly and to the members of the United Nations.

Article 64

1. The Economic and Social Council may take appropriate steps to obtain regular reports from the specialized agencies. It may make arrangements with the members of the United Nations and with the specialized agencies to obtain reports on the steps taken to give effect to its own recommendations and to recommendations on matters falling within its competence made by the General Assembly.

2. It may communicate its observations on these reports to the General Assembly.

Article 65

The Economic and Social Council may furnish information to the Security Council and shall assist the Security Council upon its request.

Article 66

1. The Economic and Social Council shall perform such functions as fall within its competence in connection with the carrying out of the recommendations of the General Assembly.

2. It may, with the approval of the General Assembly, perform services at the request of members of the United Nations and at the request of the specialized agencies.

3. It shall perform such other functions as are specified elsewhere in the present Charter or as may be assigned to it by the General Assembly.

Voting

Article 67

1. Each member of the Economic and Social Council shall have one vote.

2. Decisions of the Economic and Social Council shall be made by a majority of the members present and voting.

Procedure

Article 68

The Economic and Social Council shall set up commissions in economic and social fields and for the promotion of human rights, and such other commissions as may be required for the performance of its functions.

Article 69

The Economic and Social Council shall invite any member of the United Nations to participate, without vote, in its deliberations on any matter of particular concern to that member.

Article 70

The Economic and Social Council may make arrangements for representatives of the specialized agencies to participate, without vote, in its deliberations and in those of the commissions established by it, and for its representatives to participate in the deliberations of the specialized agencies.

Article 71

The Economic and Social Council may make suitable arrangements for consultation with non-governmental organizations which are concerned with matters within its competence. Such arrangements may be made with international organizations, and, where appropriate, with national organizations after consultation with the member of the United Nations concerned.

Article 72

1. The Economic and Social Council shall adopt its own rules of procedure, including the method of selecting its president.

2. The Economic and Social Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

CHAPTER XI

Declaration Regarding Non-Self-Governing Territories

Article 73

Members of the United Nations which have or assume responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government recognize the principle that the interests of the inhabitants of these territories are paramount, and ac-

cept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories, and, to this end:

(a) To insure, with due respect for the culture of the peoples concerned, their political, economic, social, and educational advancement, their just treatment, and their protection against abuses;

(b) To develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory and its peoples and their varying stages of advancement;

(c) To further international peace and security;

(d) To promote constructive measures of development, to encourage research, and to cooperate with one another and, when and where appropriate, with specialized international bodies with a view to the practical achievement of the social, economic and scientific purposes set forth in this Article; and

(e) To transmit regularly to the Secretary-General for information purposes, subject to such limitation as security and constitutional considerations may require, statistical and other information of a technical nature relating to economic, social, and educational conditions in the territories for which they are respectively responsible other than those territories to which Chapters XII and XIII apply.

Article 74

Members of the United Nations also agree that their policy in respect of the territories to which this Chapter applies, no less than in respect of their metropolitan areas, must be based on the general principle of good-neighborliness, due account being taken of the interests and well-being of the rest of the world in social, economic and commercial matters.

CHAPTER XII

International Trusteeship System

Article 75

The United Nations shall establish under its authority an international trusteeship system for the administration and supervision of such territories as may be placed thereunder by subsequent individual agreements. These territories are hereinafter referred to as trust territories.

Article 76

The basic objectives of the trusteeship system in accordance with the purposes

of the United Nations laid down in Article 1 of the present Charter, shall be:

(a) To further international peace and security;

(b) To promote the political, economic, social and educational advancement of the inhabitants of the trust territories, and their progressive development toward self-government or independence as may be appropriate to the particular circumstances of each territory and its peoples and the freely expressed wishes of the peoples concerned, and as may be provided by the terms of each trusteeship agreement;

(c) To encourage respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language or religion, and to encourage recognition of the interdependence of the peoples of the world; and

(d) To insure equal treatment in social, economic and commercial matters for all members of the United Nations and their nationals, and also equal treatment for the latter in the administration of justice, without prejudice to the attainment of the foregoing objectives, and subject to the provisions of Article 80.

Article 77

1. The trusteeship system shall apply to such territories in the following categories as may be placed thereunder by means of trusteeship agreements:

(a) Territories now held under mandate;

(b) Territories which may be detached from enemy states as a result of the second World War; and

(c) Territories voluntarily placed under the system by states responsible for their administration.

2. It will be a matter for subsequent agreement as to which territories in the foregoing categories will be brought under the trusteeship system and upon what terms.

Article 78

The trusteeship system shall not apply to territories which have become members of the United Nations, relationship among which shall be based on respect for the principle of sovereign equality.

Article 79

The terms of trusteeship for each territory to be placed under the trusteeship system, including any alteration or amendment, shall be agreed upon by the states directly concerned, including the mandatory power in the case of territories held under mandate by a member of the United Nations, and shall be approved as provided for in Articles 83 and 85.

Article 80

1. Except as may be agreed upon in individual trusteeship agreements, made under Articles 77, 79 and 81, placing each territory under the trusteeship system, and until such agreements have been concluded, nothing in this Chapter shall be construed in or of itself to alter in any manner the rights whatsoever of any states or any peoples or the terms of existing international instruments to which members of the United Nations may respectively be parties.

2. Paragraph 1 of this Article shall not be interpreted as giving grounds for delay or postponement of the negotiation and conclusion of agreements for placing mandated and other territories under the trusteeship system as provided for in Article 77.

Article 81

The trusteeship agreement shall in each case include the terms under which the trust territory will be administered and designate the authority which will exercise the administration of the trust territory. Such authority, hereinafter called the administering authority, may be one or more states or the organization itself.

Article 82

There may be designated, in any trusteeship agreement, a strategic area or areas which may include part or all of the trust territory to which the agreement applies, without prejudice to any special agreement or agreements made under Article 43.

Article 83

1. All functions of the United Nations relating to strategic areas, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the Security Council.

2. The basic objectives set forth in Article 76 shall be applicable to the people of each strategic area.

3. The Security Council shall, subject to the provisions of the trusteeship agreements and without prejudice to security considerations, avail itself of the assistance of the Trusteeship Council to perform those functions of the United Nations under the trusteeship system relating to political, economic, social and educational matters in the strategic areas.

Article 84

It shall be the duty of the administering authority to insure that the trust territory shall play its part in the maintenance of international peace and security. To this end the administering authority may make use of volunteer forces, facili-

ties, and assistance from the trust territory in carrying out the obligations toward the Security Council undertaken in this regard by the administering authority, as well as for local defense and the maintenance of law and order within the trust territory.

Article 85

1. The functions of the United Nations with regard to trusteeship agreements for all areas not designated as strategic, including the approval of the terms of the trusteeship agreements and of their alteration or amendment, shall be exercised by the General Assembly.

2. The Trusteeship Council, operating under the authority of the General Assembly, shall assist the General Assembly in carrying out these functions.

CHAPTER XIII

The Trusteeship Council

Composition

Article 86

1. The Trusteeship Council shall consist of the following members of the United Nations:

(a) Those members administering trust territories;

(b) Such of those members mentioned by name in Article 23 as are not administering trust territories; and

(c) As many other members elected for three-year terms by the General Assembly as may be necessary to insure that the total number of members of the Trusteeship Council is equally divided between those members of the United Nations which administer trust territories and those which do not.

2. Each member of the Trusteeship Council shall designate one specially qualified person to represent it therein.

Functions and Powers

Article 87

The General Assembly and, under its authority, the Trusteeship Council, in carrying out their functions, may:

(a) Consider reports submitted by the administering authority;

(b) Accept petitions and examine them in consultation with the administering authority;

(c) Provide for periodic visits to the respective trust territories at times agreed upon with the administering authority; and

(d) Take these and other actions in conformity with the terms of the trusteeship agreements.

Article 88

The Trusteeship Council shall formulate a questionnaire on the political, economic, social and educational advancement of the inhabitants of each trust territory, and the administering authority for each trust territory within the competence of the General Assembly shall make an annual report to the General Assembly upon the basis of such questionnaire.

Voting

Article 89

1. Each member of the Trusteeship Council shall have one vote.

2. Decisions of the Trusteeship Council shall be made by a majority of the members present and voting.

Procedure

Article 90

1. The Trusteeship Council shall adopt its own rules of procedure, including the method of selecting its president.

2. The Trusteeship Council shall meet as required in accordance with its rules, which shall include provision for the convening of meetings on the request of a majority of its members.

Article 91

The Trusteeship Council shall, when appropriate, avail itself of the assistance of the Economic and Social Council and of the specialized agencies in regard to matters with which they are respectively concerned.

CHAPTER XIV

The International Court of Justice

Article 92

The International Court of Justice shall be the principal judicial organ of the United Nations. It shall function in accordance with the annexed statute, which is based upon the statute of the Permanent Court of International Justice and forms an integral part of the present Chapter.

Article 93

1. All members of the United Nations are ipso facto parties to the statute of the International Court of Justice.

2. A state which is not a member of the United Nations may become a party to the statute of the International Court of Justice on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council.

Article 94

1. Each member of the United Nations undertakes to comply with the decision of

the International Court of Justice in any case to which it is a party.

2. If any party to a case fails to perform the obligations incumbent upon it under a judgment rendered by the Court, the other party may have recourse to the Security Council, which may, if it deems necessary, make recommendations or decide upon measures to be taken to give effect to the judgment.

Article 95

Nothing in the present Charter shall prevent members of the United Nations from entrusting the solution of their differences to other tribunals by virtue of agreements already in existence or which may be concluded in the future.

Article 96

1. The General Assembly or the Security Council may request the International Court of Justice to give an advisory opinion on any legal question.

2. Other organs of the United Nations and specialized agencies which may at any time be so authorized by the General Assembly, may also request advisory opinions of the Court on legal questions arising within the scope of their activities.

CHAPTER XV

The Secretariat

Article 97

The Secretariat shall comprise a Secretary General and such staff as the organization may require. The Secretary General shall be appointed by the General Assembly upon the recommendation of the Security Council. He shall be the chief administrative officer of the organization.

Article 98

The Secretary General shall act in that capacity in all meetings of the General Assembly, of the Security Council, of the Economic and Social Council and of the Trusteeship Council, and shall perform such other functions as are entrusted to him by these organs. The Secretary General shall make an annual report to the General Assembly on the work of the organization.

Article 99

The Secretary General may bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security.

Article 100

1. In the performance of their duties the Secretary General and the staff shall not seek or receive instructions from any government or from any other authority external to the organization. They shall

refrain from any action which might reflect on their position as international officials responsible only to the organization.

2. Each member of the United Nations undertakes to respect the exclusively international character of the responsibilities of the Secretary General and the staff, and not to seek to influence them in the discharge of their responsibilities.

Article 101

1. The staff shall be appointed by the Secretary General under regulations established by the General Assembly.

2. Appropriate staffs shall be permanently assigned to the Economic and Social Council, the Trusteeship Council, and, as required, to other organs of the United Nations. These staffs shall form a part of the Secretariat.

3. The paramount consideration in the employment of the staff and in the determination of the conditions of service shall be the necessity of securing the highest standards of efficiency, competence and integrity. Due regard shall be paid to the importance of recruiting the staff on as wide a geographical basis as possible.

CHAPTER XVI

Miscellaneous Provisions

Article 102

1. Every treaty and every international agreement entered into by any member of the United Nations after the present Charter comes into force shall as soon as possible be registered with the Secretariat and published by it.

2. No party to any such treaty or international agreement which has not been registered in accordance with the provisions of Paragraph 1 of this Article may invoke that treaty or agreement before any organ of the United Nations.

Article 103

In the event of a conflict between the obligations of the members of the United Nations under the present Charter and their obligations under any other international agreement, their obligations under the present Charter shall prevail.

Article 104

The organization shall enjoy in the territory of each of its members such legal capacity as may be necessary for the exercise of its functions and the fulfillment of its purposes.

Article 105

1. The organization shall enjoy in the territory of each of its members such privileges and immunities as are necessary for the fulfillment of its purposes.

2. Representatives of the members of the United Nations and officials of the organization shall similarly enjoy such privileges and immunities as are necessary for the independent exercise of their functions in connection with the organization.

3. The General Assembly may make recommendations with a view to determining the details of the application of Paragraphs 1 and 2 of this Article or may propose conventions to the members of the United Nations for this purpose.

CHAPTER XVII

Transitional Security Arrangements

Article 106

Pending the coming into force of such special agreements referred to in Article 43, as in the opinion of the Security Council enable it to begin the exercise of its responsibilities under Article 42, the parties to the Four-Nation Declaration, signed at Moscow, Oct. 30, 1943, and France, shall, in accordance with the provisions of Paragraph 5 of that Declaration, consult with one another and, as occasion requires, with other members of the United Nations with a view to such joint action on behalf of the organization as may be necessary for the purpose of maintaining international peace and security.

Article 107

Nothing in the present Charter shall invalidate or preclude action in relation to any state which during the second World War has been an enemy of any signatory to the present Charter, taken or authorized as a result of that war by the governments having responsibility for such action.

CHAPTER XVIII

Amendments

Article 108

Amendments to the present Charter shall come into force for all members of the United Nations when they have been adopted by a vote of two-thirds of the members of the General Assembly and ratified in accordance with their respective constitutional processes by two-thirds of the members of the United Nations, including all the permanent members of the Security Council.

Article 109

1. A general conference of the members of the United Nations for the purpose of reviewing the present Charter may be held at a date and place to be fixed by a two-thirds vote of the members of the General Assembly and by a vote of any seven members of the Security Council. Each member of the United Nations shall have one vote in the conference.

2. Any alteration of the present Charter recommended by a two-thirds vote of the conference shall take effect when ratified in accordance with their respective constitutional processes by two-thirds of the members of the United Nations including all the permanent members of the Security Council.

3. If such a conference has not been held before the tenth annual session of the General Assembly following the coming into force of the present Charter, the proposal to call such a conference shall be placed on the agenda of that session of the General Assembly, and the conference shall be held if so decided by a majority vote of the members of the General Assembly and by a vote of any seven members of the Security Council.

CHAPTER XIX

Ratification and Signature

Article 110

1. The present Charter shall be ratified by the signatory states in accordance with their respective constitutional processes.

2. The ratifications shall be deposited with the Government of the United States of America, which shall notify all the signatory states of each deposit as well as the Secretary General of the organization when he has been appointed.

3. The present Charter shall come into force upon the deposit of ratifications by the Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America, and by a majority of the other signatory states. A protocol of the ratifications deposited shall thereupon be drawn up by the Government of the United States of America which shall communicate copies thereof to all the signatory states.

4. The states signatory to the present Charter which ratify it after it has come into force will become original members of the United Nations on the date of the deposit of their respective ratifications.

Article 111

The present Charter, of which the Chinese, French, Russian, English and Spanish texts are equally authentic, shall remain deposited in the archives of the Government of the United States of America. Duly certified copies thereof shall be transmitted by that Government to the Governments of the other signatory states.

In faith whereof the representatives of the Governments of the United Nations have signed the present Charter.

Done at the city of San Francisco the twenty-sixth day of June, one thousand nine hundred and forty-five.

Delegation Heads to United Nations

- AFGHANISTAN:** Abdol Hamid Aziz, Perm. Rep. to U. N.; 2001 Twenty-fourth St., N.W., Washington, D. C.
- ARGENTINA:** José Arce, Perm. Rep. to U. N.; Empire State Building, Rooms 6224-5, N. Y. C.
- AUSTRALIA:** Col. W. R. Hodgson, Minister in Charge of Mission to U. N.; Empire State Building, Room 4510, N. Y. C.
- BELGIUM:** Fernand Van Langenhove, Perm. Rep. to U. N.; 630 Fifth Ave., Room 3001, N. Y. C.
- BOLIVIA:** Eduardo Anze Matienzo, Perm. Rep. to U. N.; 10 Rockefeller Plaza, Room 620, N. Y. C.
- BRAZIL:** Joao Carlos Muniz, Acting Rep. to U. N.; 350 Fifth Ave., Room 6005, N. Y. C.
- BYELORUSSIAN S. S. R.:** No Perm. Rep.; Foreign Minister, Kuzma V. Kisselev; care Perm. Del. of U. S. S. R. to U. N., 100 West 88th St., N. Y. C.
- CANADA:** Gen. Andrew G. L. McNaughton, Perm. Del. to the Atomic Energy Commission; 620 Fifth Ave., Room 510, N. Y. C.

The International Bank

The International Bank for Reconstruction and Development was planned at a conference in Bretton Woods, New Hampshire, in July 1944. It came into being at Savannah, Georgia, in March 1946. Eugene Meyer of Washington, D. C., a banker and newspaper publisher, was chosen its first president.

The purpose of the bank, as envisioned at Bretton Woods, is to help war-stricken nations to get back on their feet economi-

cally by lending them money; and also to help build up undeveloped countries.

The bank's third-quarter, 1947, statement for the period ending September 30, revealed a balance of approximately \$480 million available for new loans. The subscribed capital stock increased by \$200,600,000 as the result of subscriptions of shares by Australia and Paraguay. U. S. dollars available to the Bank also increased in this period to produce the balance.

U. N. FLAG ADOPTED

The Legal Commission of the General Assembly unanimously adopted the following U. N. flag design on October 7, 1947: white U. N. emblem (global map projected from the north pole and embraced in twin olive branches) centered on a rectangular blue banner.

High Lights of 1947

by MARCUS DUFFIELD

THE SECURITY COUNCIL

In his second annual report Trygve Lie, Secretary General of the United Nations, mentioned "a basic political situation which underlies and affects all international political, economic and social activity." He did not specify what this situation was, but everyone knew what he meant. The "situation" was the tension between the Soviet Union and the Western powers.

This basic friction haunted the United Nations in almost every department throughout 1947. It gave rise to long, acrimonious arguments in the Security Council. In some instances it effectively paralyzed Council action.

THE GREEK CASE

One problem in which the Council found itself powerless to act decisively was that of Greece and her relations with her northern neighbors, Albania, Yugoslavia and Bulgaria. The three northern neighbors were Communist-dominated. Greece was not; she was the only Balkan state remaining outside the Soviet orbit. Her elected government was conservative; and at the top was the King.

For many months Greece had been struggling against bands of armed rebels conducting guerrilla warfare in the northern part of the country against government forces. The rebels were leftists—not all Communists, but predominantly under Communist leadership. On Dec. 3, 1946, Greece made a formal complaint to the Security Council. She charged that the Greek rebels in the north were being aided by Albania, Yugoslavia and Bulgaria; that arms were being supplied to them; that the rebels were being allowed to operate from bases within the neighbor countries. Moreover, Greece said the aid was being furnished to the rebels with the purpose of splitting off part of northern Greece, chiefly in Macedonia, and setting it up as a separate Communist puppet state.

The Security Council put the topic on its agenda, and it became a source of controversy during most of 1947.

The Council's first step was to establish, on Dec. 19, 1946, a commission of investigation to go to Greece and find out about the alleged border violations. Each of the eleven nations on the Council was represented on the investigating commission—that is, Britain, France, Russia, China, and the United States (the Big Five permanent members); and the non-permanent members, Australia, Belgium, Brazil, Colombia, Poland and Syria.

The commission spent about two months in Greece, then went to Geneva, Switzerland, to write its verdict. On Council instructions, the commission left a subsidiary group behind in Greece to watch for possible border violations.

On May 23, 1947, the investigating commission reached its decisions. By a vote of 8 to 2 the majority ruled that Albania, Yugoslavia and Bulgaria were, in fact, guilty of aiding the Greek guerrillas; that Yugoslavia, in particular, had encouraged a separatist movement in northern Greece. Soviet Russia and Poland dissented from this opinion; they held Greece's northern neighbors blameless and attributed the whole trouble to the "reactionary" character of the Greek government. France abstained from voting. On the next part of the verdict France joined the majority in ruling that the Greek border troubles were a threat to peace, and that any further interference should be considered an act of aggression to be dealt with by the Security Council. The commission recommended that a long-term United Nations border patrol be established to see that Albania, Yugoslavia and Bulgaria ceased helping the Greek rebels. Again dissenting votes came from Russia and Poland.

The Security Council began debate June 27 on the report of its Greek investigating commission. After more than a month of argument the Council took a decisive vote on July 29. It was on a United States resolution to accept the commission's verdict; and to set up the recommended U. N. border patrol. Nine nations on the Council voted in favor. Russia voted no. And since each member of the Big Five has the right to veto any important Council decision, the resolution was lost.

Two more attempts were made to bring about Council action. A United States resolution proposed ordering Albania, Yugoslavia and Bulgaria to stop helping the Greek guerrillas. A somewhat milder Australian resolution called upon all four nations to negotiate a settlement of their differences. Nine Council members voted for both these resolutions; only Russia and Poland opposed them. But Russia's veto was sufficient to kill them.

The Council found itself face-to-face with the fact that it could take no action about the Greek border trouble.

EGYPT AND THE SUDAN

Egypt, which is a member of the United Nations, made formal complaint to the Security Council on July 11 that the presence of British troops on its territory, and

the British rule of the Sudan, threatened the liberty of Egypt and the unity of the Nile Valley. Egypt asked the Council to order British troops out of both Egypt and the Sudan immediately, and to end British administrative control of the Sudan.

The Sudan reaches down into the heart of Africa, south of Egypt, and is nearly three times its size; its population is primarily Arab in the north and Negroid in the south. It is rich in cotton, livestock and minerals, and it controls one headwater of the Nile. A hostile government in the Sudan could, said the Egyptians, cut off the flow of the Nile and ruin Egypt.

The British military occupation of Egypt began in 1882, and while England since has recognized its independence, strong British influence in its affairs has persisted. Before the British arrived, the Sudan had been conquered and ruled by Egypt. The Sudanese revolted in the 1880's, and it was not until 1898 that the British armies under Lord Kitchener were able to reconquer the region. Then the British agreed on joint Anglo-Egyptian rule of the Sudan—a condominium. Actually, British administrators have prevailed.

England and Egypt signed in 1936 a treaty of friendship running until 1956. Under it the British were allowed to keep troops there to guard the Suez Canal; and the joint rule of the Sudan was continued. In presenting its appeal to the Security Council, Egypt said the 1936 treaty was inconsistent with the United Nations Charter and should be abrogated.

The British argued that the U.N. had no right to abrogate a voluntary treaty of long standing, and that Egypt should honor it. The British were willing to withdraw troops from Egypt; and, in fact, had done so to a large extent. The main issue was the Sudan. Egypt wanted absolute control of it. The British wanted to continue the condominium to prepare the Sudanese for self-government, giving them the eventual right to choose their own future status. That is, the Sudan might later choose some form of association with Egypt, or total independence.

The debate went on in the Security Council during August, to the accompaniment of protest riots in Egypt. The Soviet Union and her friend Poland supported the Egyptian demands. Other Council members were in a quandry. Brazil suggested that the Council send the dispute back to England and Egypt for new negotiations, with the request that they report progress.

THE ALBANIAN CASE

The Corfu Channel is a narrow waterway close to the coast of Albania. It is a recognized course for ships of all nations, and many had used it since the channel had been swept of mines after the war.

Albania had given signs of annoyance, however, when British war vessels came close to her shore, although their missions were entirely peaceful.

On October 22, 1946, two British destroyers were sailing through Corfu Channel when they hit mines. One ship was a total loss, the other badly damaged; 44 sailors were killed, and 42 injured. Britain immediately protested to Albania, but got no satisfaction. British minesweepers found other mines in the channel; and, according to the British, there was unmistakable evidence that the mines were recently laid, not left over from the war.

Britain carried the case to the Security Council. She did not accuse Albania flatly of having laid the mines; but she did say Albania must have had knowledge of them, and therefore bore responsibility. Britain asked the Security Council to instruct Albania to make restitution. Albania denied all guilt.

On Feb. 27 the Council named a subcommittee of three, composed of representatives of Australia, Colombia and Poland, to examine the evidence and report. The report, on March 15, pointed toward partial Albanian guilt; the Polish representative dissented. Ten days later the Council voted 7 to 2 in favor of a British resolution charging Albania with knowledge of the minefield. Russia used the veto to kill the resolution and protect her small friend, Albania, from censure.

Finding itself thus blocked, the Council voted on April 9 to ask England and Albania to take their Corfu Channel dispute to the International Court of Justice at the Hague. This time Russia refrained from using the veto; she merely abstained from voting.

THE INDONESIAN CASE

At midnight on Sunday, July 20, the Netherlands military forces in Java opened an offensive against the native Indonesians. The Dutch described it as "police action," but the operation had the earmarks of warfare.

The situation in Java had been precarious ever since the war ended, for the Indonesians were determined to end Dutch rule. For months they fought the British, who were the first to land after the Japanese surrender, and later the Dutch. An Indonesian Republic was proclaimed.

After long negotiations, the Dutch granted *de facto* recognition to the Indonesian Republic in March, 1947, at Cheribon, Java. The agreement called for establishing, by Jan. 1, 1949, a Netherlands-Indonesian Union, with each partner having equal status under the Dutch crown. A truce in the fighting was called for; and negotiations continued in regard to an interim regime to function until 1949. Here

Disagreements arose which resulted in the renewed outburst of warfare on July 20.

Australia brought the matter before the Security Council on July 30, and forty-eight hours later the Council took the speediest and most positive action of its career. By a vote of 8 to 0 it flatly ordered the Netherlands and the Indonesian Republic to cease hostilities immediately. This was the Council's first action under Chapter VII of the Charter, which authorizes strong measures.

Both the Dutch and the Indonesians said they would obey the Council and stop fighting. But to make a truce effective was not easy. Soldiers on one side would fire, and the other side would answer. Before long the shooting resumed on a widespread scale.

Debate continued in the Security Council on the next step. The Netherlands (speaking before the Council, but not a member of it) opposed any Council action, saying the dispute was a domestic matter in which the U.N. had no right to intervene. England, France and Belgium—all colonial powers who might find their own colonial troubles hauled before the U.N. some day—sided with the Netherlands. They opposed the order to cease hostilities in Java, but refrained from killing it with a veto.

Russia, which did not mind seeing somebody else's empire in hot water, argued that the Council should take charge of the Dutch-Indonesian dispute and appoint a commission to settle it.

Russia's proposal of a commission received a favorable vote of 7 to 2 in the Council on Aug. 25. The two who voted against it were France and Belgium. The negative vote of France constituted a veto, so the proposal was killed. England and China were the abstainers in this voting.

Finding itself once more heading into a paralyzing deadlock, the Council took three compromise steps:

1. It reiterated its order of Aug. 1 that both sides cease firing.
2. It offered its "good offices" to bring the Dutch and the Indonesians together for further negotiation
3. It asked the career consuls in Batavia, the Dutch-held capital of Java, to inquire into the situation and report. The six career consuls in Batavia represented Australia, Belgium, China, England, France, and the United States.

NEW MEMBERS

The U.N. Charter gives the Security Council the authority to recommend to the General Assembly what new nations may be admitted to membership. In practice this has meant that any one of the Big Five permanent members of the Council could, by exercising its veto power, blackball an applicant.

Applications were received last year from twelve non-member states. Only two of them were admitted to the United Nations. The successful two were Pakistan, the large Moslem state born of the partition of India; and Yemen, the tiny Moslem state at the southwestern tip of Arabia. The vote in their favor was unanimous.

In the cases of the ten unsuccessful applicants, the familiar division between the Soviets and the West cropped up. Neither camp was eager for the other to obtain additional voting strength in the U.N. by bringing in smaller states whose votes might be subject to influence.

The voting on unsuccessful applicants for U.N. membership was as follows:

EIRE, TRANS-JORDAN and PORTUGAL—Barred by Soviet vetoes on Aug. 18. In each case nine Council members voted in favor of admission; and Poland abstained.

ALBANIA and the MONGOLIAN PEOPLE'S REPUBLIC—Applications defeated, on Aug. 18, for lack of majority. Only Russia, Poland and Syria voted in favor. Opposed were the United States, England, Australia and Belgium. Abstaining were Brazil, China, Colombia and France.

Five former enemy states were voted upon Aug. 21, with none admitted:

ITALY—Barred by Soviet veto. Nine Council members in favor; Poland abstaining.

AUSTRIA—Barred by Soviet veto. Eight for; France and Poland abstaining.

HUNGARY—Defeated for lack of majority. Syria for; U. S. against; others abstaining.

RUMANIA—Defeated. Syria for; None against; all others abstaining.

BULGARIA—Defeated. Syria for; U. S. against; others abstaining.

THE VETO

From the very beginning of the United Nations in the San Francisco organizing conference of 1945, the medium-sized and smaller nations resented and fought against one provision of the Charter which gave the so-called veto privilege to the Big Five permanent members of the Security Council.

The veto privilege meant that any one of the Big Five could kill any "substantive" action of the Council by voting no. The theory was that the Big Five had to act unanimously on any question involving world peace. On a "procedural" question, unanimity was not required, and there was no single-nation veto privilege. The Charter did not define what constituted a "procedural" as contrasted with a "substantive" question.

Informally, the Big Five agreed at the San Francisco conference that they would be conservative in exercising the veto

privilege. It was tacitly understood that the veto would be reserved for cases in which a big nation felt that its vital interests would be gravely imperiled by a Council action.

In 1946 Russia used the veto nine times. To the medium and smaller nations this seemed excessive and unnecessary—the very blocking tactic about which they had worried. Therefore, the General Assembly voted in December, 1946, to ask the Security Council to find a formula by which it would reduce the use of the veto. The Assembly vote was 36 to 6.

The Council postponed considering the matter until late in August, 1947, just before the Assembly was to meet again. The discussion accomplished nothing and the topic was pigeon-holed.

ARMAMENTS

The broad subject of the world's armaments was divided into three categories of discussion: 1) Control of atomic energy and other unusual means of mass destruction; 2) Regulation of the more familiar (conventional) weapons, such as warships and airplanes; and 3) Creation of a United Nations military organization—a world police force.

Category No. 1 included not only atomic bombs, but also the use of radioactive material in any form; also the use of poison chemicals or deadly germs. In the course of the year's discussions, the United States insisted upon keeping Category No. 1 entirely separate from Category No. 2, the conventional weapons. The United States felt that the two categories could not be lumped together in a loose system of international promises; the Soviet Union, on the other hand, was inclined to merge the two categories and exchange general information.

The United States wondered whether Russia was using the popular topic of disarmament as a lever to pry up atomic information. Russia, for its part, accused the United States of sabotaging the whole cause of world disarmament by refusing to throw all weapons into a common pool of discussion.

Apart from this basic disagreement, there were other points of difference in all three categories which made impossible any substantial progress.

ATOMIC ENERGY CONTROL

On the last day of 1946 the Atomic Energy Commission submitted its report to the Security Council. The report embodied in all essentials the control plan originally suggested by the United States. Ten nations voted in favor of this report, but Russia abstained.

In the course of the year's debate, the lines were drawn clearly between what

Russia wanted in the way of atomic control, as contrasted with the ideas of the United States, supported by the other nine nations making up the overwhelming majority of the Council. The fundamental points of difference were these:

1. Russia wanted first to outlaw atomic bombs by treaty, next to destroy existing bombs, and finally to set up an international agency. The United States thought this order of events endangered our safety. We wanted to set up an ironclad international control agency first—and then dispose of our bombs.

2. The United States and the majority of the Council wanted the operation and management of atomic activities to be placed in the hands of an international agency. Russia insisted that each nation be allowed to conduct its own atomic activities. Apparently Russia feared that she might be outvoted in an international atomic agency, and thus her own atomic developments might be curbed by a majority that was unfriendly to her. Both sides agreed in principle on setting up an international system of inspection to make certain that no country diverted fissionable materials from mines or plants into bomb-making. Russia, however, wanted to limit the scope of the inspections, whereas the United States wanted the international inspectors to look at everything they possibly could. But above all, the United States felt that an inspection system, no matter how comprehensive, could not guarantee safety from atomic bombs unless atomic energy development were placed in the hands of an international agency, rather than in the hands of each nation, as Russia demanded.

3. If an international atomic agency were set up, and then the inspectors caught some nation making bombs on the sly—what would happen next? The United States, and the Council majority, said that punishment for violations should be specified in advance in the atomic treaty, and should be instant and automatic in case a violation was discovered. Russia said no; the meting out of punishment should be made subject to the veto privilege resting with each of the Big Five permanent members of the Security Council. In other words, to take a purely hypothetical example, if China were caught in a violation, China could prevent the other nations from doing anything about it.

Confronted by these vast differences between the views of Russia and those of the Council majority, the U.N. Atomic Energy Commission wondered what to do next. It decided to go ahead and work out details of the control plan which the majority favored. Six groups of experts were appointed to this task, and they worked for three months on it. But no Russian participated in this formulation of specific

proposals. The deadlock hung heavy over the whole project, and no solution was in sight.

CONVENTIONAL DISARMAMENT

A United Nations Commission for Conventional Armaments came into existence on Feb. 13, 1947. Its task was to find a basis for limiting the armies, navies and air forces of the world. Desultory discussions were held in the next few months, but they were mostly concerned with matters of procedure—that is, how to approach the task. The commission had not come to grips with the heart of the problem by the time the General Assembly met in the autumn.

WORLD POLICE FORCE

The United Nations Charter contemplated the establishment of a U.N. military force, to which each nation able to do so would make contributions in the form of troops, planes, warships, or, in the case of small countries, bases of operation. Generals and admirals of the Big Five have conferred about this project intermittently for two years, and have not made any major progress.

The basic trouble was the deep suspicion existing between the Soviets and the West. More specifically, Russia insisted that each of the Big Five (England, France, China, Russia and the United States) should make exactly equal contributions to the proposed U.N. military force. This would mean that China, which has virtually no capacity to produce airplanes or warships, would have to contribute the same number of planes and ships as the United States. If this equality of contribution were to prevail, there would be no planes or ships in the U.N. force in the foreseeable future.

The United States (again supported by a non-Soviet majority) put forward a different idea. Each of the Big Five, we suggested, might contribute according to his means. For instance, China and Russia might contribute soldiers, because they are rich in manpower. The United States might contribute heavily in planes and tanks, because of our industrial power. England might specialize in warships, because of her deep naval know-how.

Here again, the deadlock hung heavy.

TRUSTEESHIP COUNCIL

The broad task of the Trusteeship Council is to keep an eye on the administration of colonial areas by imperial powers.

The Trusteeship Council held its first session at Lake Success, beginning March 26, 1947. The members included five nations which already had offered to put colonial areas under trusteeship. These "administering authorities" were Australia, Belgium, France, New Zealand and England. Also on the council were China, the United

States and the Soviet Union, which were entitled to membership by reason of their permanent seats on the Security Council. The other two elected members were Iraq and Mexico. One member, Russia, took no part in the session.

Most of the territories which were under League of Nations mandate have now been placed under its successor, the U.N. trusteeship system. The notable exceptions are Palestine and Southwest Africa. The Union of South Africa wanted to annex outright the latter territory, but the General Assembly frowned on that idea.

At its first meeting the Trusteeship Council drew up its rules, including a procedure for receiving petitions from the inhabitants of trustee regions. By this means the natives could make their voice heard if they had grievances. The council also worked out a questionnaire to be sent to administering nations with a view to finding out whether they were dealing with the native peoples in a wise and helpful manner.

The United States offered to put former Japanese mandated islands—the Marshalls, Marianas and Carolines: ninety-eight islands with a population of some 48,000—under the trusteeship of the Security Council, rather than under that of the Trusteeship Council. The reason was that the United States regarded these conquered islands as strategic areas, and desired full freedom of control over them. If the areas were under the technical supervision of the Security Council, the United States could exercise its privilege of vetoing any unwanted intervention by the U.N.

On April 2 the Security Council unanimously approved the United States trusteeship arrangement. The United States was authorized to establish bases in the trust territory, to station forces there, and to exclude United Nations investigators from any part of the area at any time.

SUBSIDIARY AND ALLIED U.N. AGENCIES

The Economic and Social Council ended its fifth session at Lake Success on Aug. 17 and adjourned until Feb. 2, 1948. Plans were completed for two international conferences—one on trade and employment at Havana beginning Nov. 21; and one on freedom of information, scheduled for March 23, 1948 at Geneva. Plans were adopted for U.N. machinery to receive complaints about the suppression of human rights from private individuals and organizations anywhere in the world. Russian opposition was voted down. Plans were approved for a U.N. appeal to every one in the world to give one day's pay or its equivalent for undernourished children everywhere.

The International Refugee Organization was established to care for the world's

1,200,000 refugees and displaced persons. It went into operation July 1 when the United Nations Relief and Rehabilitation Administration ended its operation. The I.R.O. at that time had been joined by twenty nations, pledging two-thirds of its \$151,060,000 budget. The United States joined, pledging 45.75 percent of the budget.

The International Bank for Reconstruction and Development (known as the World Bank) made its first loan in May, 1947—\$250,000,000 to France. The bank put on the market two issues of its securities, aggregating that amount, and they were oversubscribed by investors in half a day.

The International Court of Justice was inaugurated in April, 1946, at the Hague, in the Netherlands. The first case brought before it concerned the dispute between England and Albania over the mines which British destroyers hit in Corfu Channel. The fifteen judges of the court expected to reach a decision in this case early in 1948.

GENERAL ASSEMBLY (SPECIAL SESSION)

A special session of the United Nations General Assembly convened on April 28 at the request of Great Britain to consider the problem of Palestine.

The problem had its origins 2,500 years ago when the Jews were dispersed from Palestine. They began going back to the Holy Land in the 1830s, and since then there has been a rising conflict for possession between the Jews and the Arabs. At the time of World War I, the British promised the Jews a national homeland in Palestine. The country was placed under British mandate by the League of Nations, and Jewish immigration increased greatly. The Arabs became alarmed lest the Jews should eventually outnumber them. Yielding to Arab wishes, the British restricted Jewish immigration to 1,500 a month.

In 1947 there were 630,000 Jews in Palestine and some 1,200,000 Arabs. The Zionists demanded that the British allow unlimited Jewish immigration and land purchase in Palestine. The Zionists also asked that Palestine be made a Jewish commonwealth. The Arabs bitterly opposed the Zionist demands for unlimited immigration and for governmental independence. The Arabs wanted an independent state of their own.

The situation was complicated by the fact that the world's richest oil deposits lay in Arab lands (chiefly Iraq and Saudi Arabia) not far from Palestine. If the Arabs were antagonized to the point of fanatic hostility, the oil rights might vanish from English and American hands. On the other hand, there was much world

sympathy for the Jewish claim to Palestine. And the problem was kept vividly before the world's attention through the unceasing strife of Jews vs. British in the Holy Land.

In asking for the special General Assembly session that began April 28, England was asking for the world's advice as to what to do about her Palestine mandate. The Assembly appointed a committee of inquiry, on which were members from Australia, Canada, Czechoslovakia, Guatemala, India, Iran, the Netherlands, Peru, Sweden, Uruguay and Yugoslavia. The Big Five nations were not directly represented.

The committee went to Palestine to conduct its inquiry on the spot. Palestine Arabs boycotted the committee. A subcommittee also visited displaced persons camps in Europe which sheltered Jews who yearned to get to Palestine.

On Aug. 31, a seven-nation majority of the committee recommended that Palestine be removed from British administration two years from now and be divided into an Arab state and a Jewish state, each independent politically. The two states, however, would have to create an economic union to manage common tariffs, common currency, joint operation of transportation, and general economic development.

The Jews would receive a little more than half of Palestine under the committee proposal; and the Arabs the rest. Jerusalem and Bethlehem would be internationalized under a U.N. trusteeship. During the two-year interim period the committee recommended that 150,000 Jews be admitted to Palestine. After that, the Jews could control their own immigration in their own state.

The minority report of the committee was signed by India, Iran and Yugoslavia. (Australia signed neither report.) The minority was much more favorable to the Arab cause. It proposed a federalized Palestine composed of two semi-autonomous states under a central government in which both Jews and Arabs would participate. The constitution would be adopted by a majority vote in all Palestine, which would give the deciding voice to the numerically stronger Arabs.

When the regular session of the General Assembly met on Sept. 15, both Soviet Russia and the United States came out in favor of the principle of partitioning Palestine, as had been recommended by the majority of the committee.

(REGULAR SESSION)

The second annual session of the General Assembly opened in New York on Sept. 15, 1947, and promptly became the new battleground in the verbal warfare between the United States and Russia.

All fifty-seven members of the United Nations are represented in the Assembly, and each has one vote. The Assembly has no power to command any nation to do anything. It can only make recommendations—by a two-thirds vote, free of the veto—and thus mobilize the moral force of world opinion.

The policy of the United States, as outlined to the Assembly by Secretary Marshall, was to bring before it some of the topics with which the Security Council failed to deal successfully; also to enlarge the prestige and activities of the Assembly. Altogether the Assembly placed on its agenda for consideration about sixty problems. The major ones were these:

The "Little Assembly"

The United States advocated that the Assembly set up an "Interim Committee on Peace and Security," on which every member of the U. N. would be represented. It would serve throughout the year to consider "situations and disputes impairing friendly relations." Through this device the Assembly would, in effect, be in session all the time, ready to deal with problems as they arose, instead of meeting only once a year.

Russia opposed this suggestion, calling it "an ill-conceived scheme to substitute and by-pass the Security Council."

Reform of the Veto

The United States advocated that the Big Five veto privilege in the Security Council be drastically restricted. The Big Five nations would not be permitted to veto applications for membership in the U. N. under this proposal. Nor could they veto Council action toward the peaceful settlement of disputes under Chapter VI of the Charter. They would retain their veto privilege only in cases where the Council deemed it necessary to exert pressure of some sort on an offending nation.

By mid-October Russia had used the veto twenty-two times. Nearly all of those vetoes would have been impossible under the new rule proposed by Secretary Marshall. Russia opposed the suggestion.

U. S. "Warmongering"

On Sept. 18, Andrei Y. Vishinsky, speaking for Russia, charged that "warmongers" within the United States were instigating a third world war. These warmongers, he said, included American "capitalist monopolies"—industrial, banking and financial groups; also some organs of the press; also some prominent individuals. He named Senators Brien McMahon and C. Wayland Brooks; Representative Charles A. Eaton, and George H. Earle, former Minister to Hungary; Virgil Jordan, president of the National Industrial Conference Board, and John Foster Dulles, a member

of the U. S. delegation to the Assembly. Among the business firms named by Vishinsky were du Pont, Monsanto Chemical, Westinghouse, General Electric and Standard Oil.

Vishinsky said the Soviet Union was the target of all this alleged war-inciting propaganda. He demanded that the General Assembly adopt a resolution condemning "criminal propaganda of a new war," and adopt another resolution urging "the governments of all countries on pain of criminal punishment to prohibit war propaganda in any form and take measures for the prevention and suppression of war propaganda as a socially dangerous activity threatening the vital interests and welfare of the peace-loving nations."

The United States replied that the Soviet charges were fantastic; and that Russia's resolution should be discarded completely as a menace to freedom of speech.

A compromise resolution, put forward by Australia, Canada and France, was unanimously adopted by the Assembly's political committee. It requested member nations to promote friendly relations by all available means of publicity and propaganda; and to encourage the dissemination of information expressing "the undoubted desire of all peoples for peace."

The Greek Case

The failure of the Security Council to take action about threats to the peace in the Balkans already has been discussed in this article. When the Assembly met, the United States asked it to take over where the Council left off.

The wishes of the United States were, in the main, granted by the Assembly, acting through its Political and Security Committee, which includes all member nations. A series of resolutions were adopted which did the following things: 1.) Asked Greece, Yugoslavia, Bulgaria and Albania to settle their troubles in a peaceful way. 2.) Asked Yugoslavia, Bulgaria and Albania to cease giving help to Greek guerrilla rebels. 3.) Established a special U. N. commission to operate in the Balkans and observe whether the first two requests were carried out.

Russia fought these resolutions, but lost out. The vote on the establishment of a commission was 34 in favor, 6 against. The Scandinavian and Arab states abstained from voting. Eleven nations were named to be represented on the Balkan commission—England, France, China, the United States, Russia, Brazil, Mexico, the Netherlands, Australia, Pakistan and Poland.

Russia told the Assembly that she would boycott the commission. That presumably meant that her seat on it would be vacant, and Poland's also. Presumably it also meant that Yugoslavia, Bulgaria and Albania would not permit the commission members to enter their territory.

The Fourteen Points

Wilson's Address to Congress January 8, 1918

GENTLEMEN of the Congress:

It will be our wish and purpose that the processes of peace, when they are begun, shall be absolutely open and that they shall involve and permit henceforth no secret understandings of any kind. The day of conquest and aggrandizement is gone by; so is also the day of secret covenants entered into in the interest of particular governments and likely at some unlooked-for moment to upset the peace of the world. It is this happy fact, now clear to the view of every public man whose thoughts do not still linger in an age that is dead and gone, which makes it possible for every nation whose purposes are consistent with justice and the peace of the world to avow now or at any other time the objects it has in view.

We entered this war because violations of right had occurred which touched us to the quick and made the life of our own people impossible unless they were corrected and the world secured once for all against their recurrence. What we demand in this war, therefore, is nothing peculiar to ourselves. It is that the world be made fit and safe to live in; and particularly that it be made safe for every peace-loving nation which, like our own, wishes to live its own life, determine its own institutions, be assured of justice and fair dealing by the other peoples of the world as against force and selfish aggression. All the peoples of the world are in effect partners in this interest, and for our own part we see very clearly that unless justice be done to others it will not be done to us. The program of the world's peace, therefore, is our program; and that program, the only possible program, as we see it, is this:

I. Open covenants of peace, openly arrived at, after which there shall be no private international understandings of any kind but diplomacy shall proceed always frankly and in the public view.

II. Absolute freedom of navigation upon the seas, outside territorial waters, alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.

III. The removal, so far as possible, of all economic barriers and the establishment of an equality of trade conditions among all the nations consenting to the peace and associating themselves for its maintenance.

IV. Adequate guarantees given and taken that national armaments will be reduced to the lowest point consistent with domestic safety.

V. A free, open-minded, and absolutely

impartial adjustment of all colonial claims, based upon a strict observance of the principle that in determining all such questions of sovereignty the interests of the populations concerned must have equal weight with the equitable claims of the government whose title is to be determined.

VI. The evacuation of all Russian territory and such a settlement of all questions affecting Russia as will secure the best and freest cooperation of the other nations of the world in obtaining for her an unhampered and unembarrassed opportunity for the independent determination of her own political development and national policy and assure her of a sincere welcome into the society of free nations under institutions of her own choosing; and, more than a welcome, assistance also of every kind that she may need and may herself desire. The treatment accorded Russia by her sister nations in the months to come will be the acid test of their good will, of their comprehension of her needs as distinguished from their own interests, and of their intelligent and unselfish sympathy.

VII. Belgium, the whole world will agree, must be evacuated and restored, without any attempt to limit the sovereignty which she enjoys in common with all other free nations. No other single act will serve as this will serve to restore confidence among the nations in the laws which they have themselves set and determined for the government of their relations with one another. Without this healing act the whole structure and validity of international law is forever impaired.

VIII. All French territory should be freed and the invaded portions restored, and the wrong done to France by Prussia in 1871 in the matter of Alsace-Lorraine, which has unsettled the peace of the world for nearly fifty years, should be righted, in order that peace may once more be made secure in the interest of all.

IX. A readjustment of the frontiers of Italy should be effected along clearly recognizable lines of nationality.

X. The peoples of Austria-Hungary, whose place among the nations we wish to see safeguarded and assured, should be accorded the freest opportunity of autonomous development.

XI. Rumania, Serbia, and Montenegro should be evacuated; occupied territories restored; Serbia accorded free and secure access to the sea; and the relations

of the several Balkan states to one another determined by friendly counsel along historically established lines of allegiance and nationality; and international guarantees of the political and economic independence and territorial integrity of the several Balkan states should be entered into.

XII. The Turkish portions of the present Ottoman Empire should be assured a secure sovereignty, but the other nationalities which are now under Turkish rule should be assured an undoubted security of life and an absolutely unmolested opportunity of autonomous development, and the Dardanelles should be permanently opened as a free passage to the ships and commerce of all nations under international guarantees.

XIII. An independent Polish state should be erected which should include the territories inhabited by indisputably Polish populations, which should be assured a free and secure access to the sea, and whose political and economic independence and territorial integrity should be guaranteed by international covenant.

XIV. A general association of nations must be formed under specific covenants for the purpose of affording mutual guarantees of political independence and territorial integrity to great and small states alike.

In regard to these essential rectifications of wrong and assertions of right we feel ourselves to be intimate partners of all the governments and peoples associated together against the Imperialists. We cannot be separated in interest or divided in purpose. We stand together until the end.

For such arrangements and covenants we are willing to fight and to continue to fight until they are achieved; but only because we wish the right to prevail and desire a just and stable peace such as can be secured only by removing the chief provocations to war, which this program

does not remove. We have no jealousy of German greatness, and there is nothing in this program that impairs it. We grudge her no achievement or distinction of learning or of pacific enterprise such as have made her record very bright and very enviable. We do not wish to injure her or to block in any way her legitimate influence or power. We do not wish to fight her either with arms or with hostile arrangements of trade if she is willing to associate herself with us and the other peace-loving nations of the world in covenants of justice and law and fair dealing. We wish her only to accept a place of equality among the peoples of the world,—the new world in which we now live,—instead of a place of mastery.

Neither do we presume to suggest to her any alteration or modification of her institutions. But it is necessary, we must frankly say, and necessary as a preliminary to any intelligent dealings with her on our part, that we should know whom her spokesmen speak for when they speak to us, whether for the Reichstag majority or for the military party and the men whose creed is imperial domination.

We have spoken now, surely, in terms too concrete to admit of any further doubt or question. An evident principle runs through the whole program I have outlined. It is the principle of justice to all peoples and nationalities, and their right to live on equal terms of liberty and safety with one another, whether they be strong or weak. Unless this principle be made its foundation no part of the structure of international justice can stand. The people of the United States could act upon no other principle; and to the vindication of this principle they are ready to devote their lives, their honor, and everything that they possess. The moral climax of this the culminating and final war for human liberty has come, and they are ready to put their own strength, their own highest purpose, their own integrity and devotion to the test.

Chronology of League of Nations

- 1919—Covenant adopted at Versailles Peace Conference (Apr. 28). U. S. rejects membership, 49 to 35 (Nov. 19).
- 1920—League comes into legal existence with entry into force of Versailles Treaty (Jan. 10). Council of League meets in Paris (Jan. 16). First meeting of Assembly of League (Nov. 15); headquarters established in Geneva.
- 1922—Permanent Court of International Justice (World Court) organized at The Hague (Jan. 30); first session (June 15).
- 1923—Mussolini defies League by seizing Greek island of Corfu.
- 1926—Germany admitted to League.

- 1931—Japan defies League by invasion of Manchuria.
- 1933—Germany withdraws from League and begins rearming.
- 1934—U. S. S. R. admitted to League.
- 1935—League turns over Saar region to Germany after plebiscite. Japan withdraws from League. League puts into effect economic sanctions against Italy for invasion of Ethiopia.
- 1937—Italy withdraws from League.
- 1939—U. S. S. R. expelled from League for invasion of Finland.
- 1946—Final session of League in Geneva (Apr. 8-18); League dissolved.

The Atlantic Charter

(In a dramatic meeting off Newfoundland, August 14, 1941, President Roosevelt and Winston Churchill formulated this statement of common war aims.)

The President of the United States of America and the Prime Minister, Mr. Churchill, representing His Majesty's Government in the United Kingdom, being met together, deem it right to make known certain common principles in the national policies of their respective countries on which they base their hopes for a better future for the world.

FIRST, their countries seek no aggrandizement, territorial or other;

SECOND, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned;

THIRD, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self government restored to those who have been forcibly deprived of them;

FOURTH, they will endeavor, with due respect for their existing obligations, to further the enjoyment by all States, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity;

FIFTH, they desire to bring about the fullest collaboration between all nations in the economic field with the object of securing, for all, improved labor standards, economic advancement and social security;

SIXTH, after the final destruction of Nazi tyranny, they hope to see established a peace which will afford to all nations the means of dwelling in safety within their own boundaries, and which will afford assurance that all men in all lands may live out their lives in freedom from fear and want;

SEVENTH, such a peace should enable all men to traverse the high seas and oceans without hindrance;

EIGHTH, they believe that all the nations of the world, for realistic as well as spiritual reasons, must come to the abandonment of the use of force. Since no future peace can be maintained if land, sea or air armaments continue to be employed by nations which threaten, or may threaten, aggression outside of their frontiers, they believe, pending the establishment of a wider and permanent system of general security, that the disarmament of such nations is essential. They will likewise aid and encourage all other practicable measures which will lighten for peace-loving peoples the crushing burden of armaments.

FRANKLIN D. ROOSEVELT
WINSTON S. CHURCHILL

The Four Freedoms

On January 6, 1941, in his annual message to Congress, President Franklin D. Roosevelt made his famous speech expressing the following freedoms:

1. "Freedom of speech and expression."
2. "Freedom of every person to worship God in his own way."
3. "Freedom from want."
4. "Freedom from fear."

Definitions

COLONY: a company of people, purposely or otherwise, transplanted from their mother country and remaining subject to the jurisdiction of the parent state.

CROWN COLONY: a British Empire colony in which the crown retains some kind of control over legislation.

DOMINION: an autonomous community within the British Empire, equal in status to any other dominion, but united by a common allegiance to the crown.

PROTECTORATE: a relation of a superior authority assumed by one power, in which the former protects the latter from domestic or foreign disturbance or dictation, and shares in the management of its affairs.

MANDATE: an order or commission granted by the League of Nations (before its defuncton) as mandator to a member nation.

SPHERE OF INFLUENCE: a territory within which the political influence or the interests of one nation are permitted by other nations to be more or less exclusive. Also loosely used to denote regions more or less under the control of a nation but not constituting a formally recognized protectorate or suzerainty.

SUZERAIN: a state that exercises political control over another state in relation to which it is sovereign.

TRUSTESHIP: administration by a member of the United Nations of an area not yet ready for self-government.

The Potsdam Declaration

Text of the declaration issued at Potsdam, Germany, July 26, 1945, outlining the terms under which Japan would be allowed to surrender:

1. We, the President of the United States, the President of the national government of the Republic of China and the Prime Minister of Great Britain, representing the hundreds of millions of our countrymen, have conferred and agreed that Japan shall be given the opportunity to end this war.

2. The prodigious land, sea, and air forces of the United States, the British Empire and China, many times reinforced by their armies and air fleets from the west, are poised to strike the final blow at Japan. This military power is sustained and inspired by the determination of all allied nations to prosecute the war against Japan until she ceases to resist.

3. The result of the futile and senseless German resistance to the might of the aroused free peoples of the world stands forth in awful clarity as an example to the people of Japan.

The might that now converges on Japan is immeasurably greater than that which, when applied to the resisting Nazis, necessarily laid waste to the land, the industry, and the method of life of the whole German people.

The full application of our military power, backed by our resolve, will mean the inevitable and complete destruction of the Japanese armed forces and just as inevitably the utter devastation of the Japanese homeland.

4. The time has come for Japan to decide whether she will continue to be controlled by these self-willed militaristic advisers whose unintelligent calculations have brought the empire of Japan to the threshold of annihilation, or whether she will follow the path of reason.

5. The following are our terms: we will not deviate from them; there are no alternatives; we shall brook no delay.

6. There must be eliminated for all time the authority and influence of those who have deceived and misled the people of Japan into embarking on world conquest, for we insist that a new order of peace, security, and justice will be impossible until irresponsible militarism is driven from the world.

7. Until such a new order is established

and until there is convincing proof that Japan's war-making power is destroyed, points in Japanese territory to be designated by the Allies shall be occupied to secure the achievement of the basic objectives we are here setting forth.

8. The terms of the Cairo declaration shall be carried out and Japanese sovereignty shall be limited to the Islands of Honshu, Hokkaido, Kyushu, Shikoku and such minor islands as we determine.

9. Japanese military forces after being completely disarmed shall be permitted to return to their homes with the opportunity to lead peaceful and productive lives.

10. We do not intend that the Japanese shall be enslaved as a race or destroyed as a nation, but stern justice shall be meted out to all war criminals, including those who have visited cruelties upon our prisoners.

The Japanese government shall remove all obstacles to the revival and strengthening of democratic tendencies among the Japanese people. Freedom of speech and religion and of thought, as well as respect for the fundamental human rights, shall be established.

11. Japan shall be permitted to maintain such industries as will sustain her economy and permit the payment of just reparation in kind, but not those industries which will enable her to rearm for war.

To this end, access to, as distinguished from control of, raw materials shall be permitted. Eventual Japanese participation in world trade relations shall be permitted.

12. The occupying forces of the Allies shall be withdrawn from Japan as soon as these objectives have been accomplished and there has been established in accordance with the freely expressed will of the Japanese people a peacefully inclined and responsible government.

13. We call upon the government of Japan to proclaim now the unconditional surrender of all Japanese armed forces, and to provide proper and adequate assurances of their good faith in such action. The alternative for Japan is prompt and utter destruction.

Japan's Surrender

Text of Japanese surrender document signed aboard the U. S. S. *Missouri* in Tokyo Bay, September 2, 1945, Tokyo time (September 1, New York Time).

1. We, acting by command of and in behalf of the Emperor of Japan, the Japanese government and the Japanese im-

perial general headquarters, hereby accept provisions in the declaration issued by the heads of the governments of the United

States, China, and Great Britain July 26, 1945, at Potsdam, and subsequently adhered to by the Union of Soviet Socialist Republics, which four powers are hereafter referred to as the Allied Powers.

2. We hereby proclaim the unconditional surrender to the Allied Powers of the Japanese imperial general headquarters and of all Japanese armed forces and all armed forces under Japanese control wherever situated.

3. We hereby command all Japanese forces, wherever situated, and the Japanese people to cease hostilities forthwith, to preserve and save from damage all ships, aircraft and military and civil property and to comply with all requirements which may be imposed by the Supreme Commander for the Allied Powers or by agencies of the Japanese government at his direction.

4. We hereby command the Japanese imperial general headquarters to issue at once orders to the commanders of all Japanese forces and all forces under Japanese control, wherever situated, to surrender unconditionally themselves and all forces under their control.

5. We hereby command all civil, military, and naval officials to obey and enforce all proclamations, orders and direc-

tives deemed by the Supreme Commander for the Allied Powers to be proper to effectuate this surrender and issued by him or under his authority and we direct all such officials to remain at their posts and to continue to perform their non-combat duties unless specially relieved by him or under his authority.

6. We hereby undertake for the Emperor, the Japanese government, and their successors to carry out the provisions of the Potsdam Declaration in good faith, and to issue whatever orders and take whatever action may be required by the Supreme Commander for the Allied Powers or by any other designated representative of the Allied Powers for the purpose of giving effect to that declaration.

7. We hereby command the Japanese imperial government and the Japanese imperial general headquarters at once to liberate all Allied prisoners of war and civilian internees now under Japanese control and to provide for their protection, care, maintenance, and immediate transportation to places as directed.

8. The authority of the Emperor and the Japanese government to rule the state shall be subject to the Supreme Commander for the Allied Powers who will take such steps as he deems proper to effectuate these terms of surrender.

The Surrender of Germany

Germany surrendered unconditionally to the Western Allies and the Soviet Union at a ceremony in a schoolhouse in Reims, France, at 2:41 A. M., French Time (8:41 P. M., E. W. T., May 6), May 7, 1945. This act brought the European war to a close, five years, eight months and six days after the Nazis started their invasions.

Following is the text of "An Act of Military Surrender."

"1. We, the undersigned, acting by authority of the German High Command, hereby surrender unconditionally to the Supreme Commander, Allied Expeditionary Force, and simultaneously to the Soviet High Command, all forces on land, sea, and in the air who are at this date under German control.

"2. The German High Command will at once issue orders to all German military, naval and air authorities and to all forces under German control to cease active operations at 2301 hours (11:01) Central European Time on Eight May and to remain in the positions occupied at the time. No ship, vessel or aircraft is to be scuttled, or any damage done to their hull, machinery, or equipment.

"3. The German High Command will at once issue to the appropriate commanders, and ensure the carrying out of any fur-

ther orders issued by the Supreme Commander, Allied Expeditionary Force, and by the Soviet High Command.

"4. This Act of Military Surrender is without prejudice to, and will be superseded by, any general instrument of surrender imposed, or on behalf of the United Nations and applicable to Germany and the German Armed Forces as a whole.

"In the event of the German High Command or any of the forces under their control failing to act in accordance with this Act of Surrender, the Supreme Commander, Allied Expeditionary Force, and the Soviet High Command will take such punitive or other action as they deem appropriate.

"Signed at Reims, France, at 0241 hours (2:41 A. M.), on the Seventh day of May, 1945.

"On behalf of the German High Command—Jodl.

"In the presence of:

"On behalf of the Supreme Commander, Allied Expeditionary Force—W. B. Smith.

"On behalf of the Soviet High Command—Ivan Susloparoff.

"On behalf of the French—F. Sevez."

The surrender terms were ratified in Berlin on May 8, 1945, and the war officially ended at 12:01 A. M., May 9, 1945.

LABOR'S INTERNATIONAL

by Dr. Harry W. Laidler

Executive Director, League for Industrial Democracy

THE FORMATION IN SEPTEMBER, 1947, in Belgrade, Yugoslavia, of the *Cominform*, or Communist Information Bureau, by Communist representatives of nine countries has called renewed attention to the internationals of workers which have been forming and reforming in Europe for over four score years. The first significant international organization of labor was initiated at a conference held at St. Martin's Hall, London, September 25-28, 1864, and attended by representatives of British, German, French, Italian and Polish labor groups. This conference addressed and in large part directed by Karl Marx, "the father of scientific socialism," gave birth to the International Working Men's Association, later referred to as the First International. The International was to serve as an information center and as an agency to rally the forces of labor for independent political action, for social legislation and ultimately for the "emancipation of the working class."

Internal dissensions between the socialist Marx and the anarchist Bakunin, the shattering effects of the Franco-Prussia war, and the dissolution of the Paris Commune, caused the removal of the International in 1872 to the United States, where it soon died.

During the late Seventies and Eighties, labor and socialist movements advanced in many countries and, in Paris, in 1889, the Second International was born. From that year until World War I, this International, committed to democratic progress toward socialism, did much to advance the cause of political democracy and to stimulate social legislation. It suspended activity with the coming of the war and, following World War I, merged, in 1923, with the so-called Second-and-a-Half or Vienna International, made up of anti-militarist socialists, to form the Labor and Socialist International.

The L. S. I., greatly weakened, following the nazification of Germany, continued to function as the representative of democratic socialist forces in Europe until World War II. Following the war several conferences were called in Britain and on the Continent in 1946 and 1947 of representatives of socialist movements, but no formal bureau was organized.

The Bolshevik Revolution

In the meanwhile, with the advent of the Bolshevik Revolution of November, 1917, the newly formed Communist parties met in Moscow, March 2-6, 1919, and organized the Communist International. The

Manifesto issued at the inauguration of this International condemned the reformism of the leaders of the Second International and declared that "war against the socialist center is a necessary condition of successful war against imperialism."

The International pledged its affiliated groups to the overthrow of capitalism, and the establishment of a proletarian dictatorship. It condemned "bourgeois democracy" and maintained that the change to Communism could be brought about only through extra-parliamentary means.

In 1919, Lenin and the other Bolshevik leaders felt that Russia would not be able successfully to defend the Revolution within its borders unless the Bolshevik Revolution spread to the industrialized nations. They therefore proceeded to split left-wing elements away from the socialist, the trade union and other radical movements and to form Communist parties and "Red" Trade Unions directed by central committees in Moscow.

In the second Congress of the Comintern in Petrograd and Moscow, held from July 19 to August 7, 1920, the assembled delegates were summoned to the work of "world revolution" at once.

It was this Congress which adopted the famous "twenty-one points" or conditions of admission to the Comintern. Parties wishing to join the International were admonished that they must systematically propagate the necessity of the dictatorship of the proletariat; create everywhere a parallel illegal machine to assist them in the hour of the revolution; carry on systematic campaigns among farmers, trade unions, consumer cooperatives and mass organizations; remove from posts in the labor movement all reformists and centrist elements; give unqualified support to every Soviet republic; "hinder the transportation of munitions of war to the enemies of the soviet republic"; print all important official Communist documents, and carry out all decisions of the International and its committees. The Manifesto likewise declared the Communists could have no confidence in bourgeois legality, as "in nearly every country in Europe and America the class struggle is entering upon the phase of civil war."

The world revolution, however, failed to materialize. The Communist governments set up in Hungary and Bavaria were soon crushed. Fascistic movements came into control of Hungary and Italy, and only in Germany, France and Czechoslovakia outside of Russia, did European Communists remain a potent political force.

Without the hope of immediate world

revolution, Russian leaders began in 1928 to use the Comintern as an agency to assist them in their fight to build up the Russian economy. As a means to that end, they stimulated Communist parties throughout the world to broadcast the alleged dangers of imperialist aggressions on the part of Great Britain, the United States and France, and to help convince the masses at home that power should be concentrated still further in the hands of the ruling Soviet group.

The Rise of Fascism

With Hitler's rise to power, and the increasing danger of war with Germany, the Comintern, however, reversed its policy of wholesale condemnation of western democracy. In 1935 it called its first convention in seven years, and urged all Communist parties to form united fronts with socialist and progressive forces in the fight to retain "bourgeois-democratic liberties" and to forestall the coming of facism. The socialists were no longer to be regarded as "social fascists," but as friends of democracy.

At the same time, Communists were warned that they should continuously combat the "illusion that it is possible to bring about socialism by peaceful, legal methods." They should also seek to use the united front movements to put Communists in a strategic position to lead labor to a proletarian dictatorship when the time was ripe.

From 1935 until the German-Russo Pact of August 24, 1939, the Comintern and its constituent parties took an active part in united front movements with socialist and democratic forces. On the signing of this pact, however, Comintern policy was again reversed. Communists returned to a policy of violent attacks on non-Communist forces and, in the United States, Britain and France, opposed the "imperialism" of the Allies. On June 22, 1941, on the German invasion of Russia, Comintern policy was again revolutionized and Communists in Allied countries were directed to support the war "for democracy."

World War II

As the Second World War advanced, Russian Communists became increasingly of the opinion that the continued existence of the Communist International was proving a stumbling block to the Soviet government in its relations with other governments composing the United Nations. On May 22, 1943, the Presidium of the Communist International declared that the Comintern had outlived its usefulness. Deep differences in the history, traditions, state of economic and political development of nations, they said, had placed insuperable difficulties in the way of central

direction of the working classes' political activities. The International was dissolved in June of that year.

Despite this dissolution, however, the Communist parties in the various countries closely followed, for the most part, the policies favored by the Soviet Republic.

In September, 1947, the Russian Communists decided again to revive, in somewhat different form, their International Representatives of Communist groups in nine countries (Bulgaria, Czechoslovakia, France, Hungary, Italy, Poland, Rumania, Russia and Yugoslavia) met in Poland and formed an Information Bureau to be located in Belgrade, to exchange experiences and coordinate activities. Later the Bureau invited all Communist parties to seek admission.

In justification of this new *Cominform*, as it has been called, those present, in their Manifesto, declared that the United States and England were engaged in strengthening imperialism, in "choking democracy," and in waging an unholy propaganda war against the Soviet Union. Thus it was necessary for the anti-imperialistic democratic camp to close its ranks and to fight against imperialists and their supporters, the "treasonable socialists" of the type of Leon Blum.

International Trade Organizations

During the years when labor's political internationals were rising and falling, labor organized internationally as trade unionists and cooperators. In 1913, the International Federation of Trade Unions was formed, superseding an International Trade Union Secretariat, first launched in 1901. The I. F. T. U. was reorganized at Amsterdam after World War I at a congress lasting from July 28-August 2, 1919, and functioned until its dissolution in 1946. During the Twenties and early Thirties it was bitterly fought by the Red International of Trade Unions formed in Moscow July 3, 1921. In October, 1945, in Paris, a new World Federation of Trade Unions was formed, including the Russian trade unions. Practically all significant trade union movements of the world joined this organization with the exception of the A. F. of L., which refused to join on the ground that the Federation admitted others besides "free trade unions" and that it was too largely influenced by Communist forces.

The I. C. A.

In the field of consumers' cooperatives, an international—the International Co-operative Alliance—with a membership of 85,000,000 families, has been in existence since 1892. The I. C. A., the W. F. T. U. and the A. F. of L. are all consultants in the U. N. Economic and Social Council.

THE OTHER NATIONS OF THE WORLD

A GUIDE TO MAIN HISTORICAL, POLITICAL, ECONOMIC,
GEOGRAPHIC AND SOCIAL FACTS

Prepared by the Staff of
ENCYCLOPAEDIA BRITANNICA

Under the direction of
WALTER YUST, Editor-in-chief

Afghanistan (Kingdom)

Area: Approx. 270,000 square miles.

Population (est. 1946): 12,000,000 (Approx. 35% Afghan, 21% Tadchik, 8.5% Mongolian, 35.5% others).

Density per square mile: 44.

Ruler: Mohammed Zaher Shah.

Premier: Shah Mahmoud Khan Ghazi.

Principal cities (est.): Kabul, 206,000 (capital); Kandahar, 77,000 (trading center); Herat, 76,000 (farming).

Monetary unit: Afghani.

Languages: Persian (official), Pushtu, Turki.

Religion: Mohammedan (Sunni, 90%; Shiah, 10%).

HISTORY. Wedged between India, Iran and the U.S.S.R. in southwestern Asia without outlet to the sea, Afghanistan did not become an independent state until 1747. Before that, it was variously a cluster of small states under nominal Arab rule, or part of Mongol or Mogul empires, or a dismembered object parceled among India, Persia and the Uzbeks.

By the 19th century Afghanistan had passed into the British sphere of influence, though the British had to send in troops more than once to enforce Afghan friendliness. In 1880 the British recognized Abdur Rahman Khan as Emir and gave him an annual subsidy of more than \$500,000 to delegate management of his foreign relations to Britain. His son, Habibullah, succeeded him in 1901 and kept Afghanistan neutral in World War I despite strong pressure of pro-Turkish elements.

On Aug. 8, 1919, a treaty was signed making Afghanistan free and independent of all British control. The country maintained strict neutrality in World War II, and was admitted to the United Nations in Nov. 1946.

GOVERNMENT. Under the 1932 constitution, Afghanistan is a constitutional mon-

archy, with authority vested in the sovereign and parliament, which has a senate of forty-five members named for life by the sovereign and a national assembly of 109 elected members. Executive power is exercised by the sovereign and cabinet headed by the prime minister.

Military service is compulsory. The army strength is about 100,000, supplemented by tribal bands. There is a small air force.

SOCIAL AND ECONOMIC CONDITIONS. Education is nominally compulsory. Primary schools exist in many parts of the country, but secondary schools only in Kabul and provincial capitals. There were about 100,000 pupils in 369 schools in 1946.

Only a fifth of the soil is under cultivation, the greater part of the country being mountainous and rocky. Farming is confined to the fertile valleys and plains, sometimes with the aid of irrigation. Two crops a year are usually grown. Important ones include the asafetida plant, castor beans, cereals, fruit, madder, tobacco, cotton and vegetables. Wheat is the staple food. The fat-tailed indigenous sheep is the principal source of meat, wearing apparel and skins for export. Camels, humped cattle, oxen and asses are numerous.

Important manufactures include silk, felt, sheepskin coats, soap, carpets and boots. Factories are being erected by government monopolies to produce sugar, textiles, vehicles, and heat and light.

Among the leading exports are karakul skins (mostly to the U.S.), cotton, wool, rugs, carpets and dried fruits. Approximately 2,400,000 karakul skins were exported in 1945-46. Most of the trade is carried on through India, but cattle and foodstuffs are exported to the U.S.S.R. in return for cotton and wool. Trade through India (1944-45) included exports, £8,642,448 and imports, £2,747,577.

Revenue and expenditure amount to about \$45,000,000 a year.

Afghanistan has no railways. Transport is generally by camel or pack horse. The principal trade routes are through the Khyber and Khojak Passes to India, and to the Uzbek and Turkmen Soviet Socialist Republics. There are about 6,000 miles of roads suitable for motor transportation.

Both mineral and forest resources are largely unexploited. There are deposits of coal, copper, gold, iron ore, oil and silver. Timber and gum resin are obtained from the forests.

NATURAL FEATURES; CLIMATE. Afghanistan, approximately the size of Texas, is split east to west by the Hindu Kush range of the Himalayas, rising in the east to heights of 24,000 feet. Except in the southwest, most of the country is covered by high snow-capped mountains and deep valleys. The few passes are deep and narrow. The Amu Darya (Oxus), Kabul and Helmand are the most important rivers, and there are hundreds of swift and unnavigable mountain streams. The climate ranges from extremes of below zero to more than 100° in the north; however it is not so extreme in the south, although snowfall is heavy all over the country in winter. Rainfall, chiefly in the spring, is relatively light. The hottest weather occurs in summer and is particularly severe around Kandahar.

Albania (Republic)

(Shqiperia)

Area: 10,629 square miles.

Population (est. 1939): 1,063,000 (Albanian 99.8%; others, .2%).

Density per square mile: 100.0.

Head of the Government: Enver Hoxha.

Principal cities (last census, 1930): Tirana, 38,806 (capital); Scutari, 29,209 (northern trading center); Koritsa, 22,787 (farming center).

Monetary unit: Albanian franc.

Language: Albanian.

Religions (est.): Moslem, 69%; Orthodox Christian, 21%; Roman Catholic, 10%.

HISTORY. A tiny, backward state approximately the size of Maryland, Albania has acquired considerable importance since World War II because of its close ties with the Soviet Union and its strategic location at the mouth of the Adriatic. After the fall of the Roman Empire, Albania became part of the Byzantine Empire and was successively invaded by Goths, Serbs and Bulgarians. From 1014 to 1204 it was again under Byzantine rule. An alliance of Albanian chieftains (1444-66) under Skanderbeg failed to halt the advance of the Turks, and the country remained under at least nominal Turkish rule for more than four

centuries, until it proclaimed its independence on Nov. 28, 1912.

During World War I Albania was variously occupied by Italian, Greek, French, Serb and Austro-Bulgarian forces. On Aug. 2, 1920, Italy recognized Albanian independence and evacuated the country. Ahmed Zogu, premier in 1922-23, ousted the government of Mgr. Fan Noli in 1924 and became president of a newly constituted republic in 1925. Three years later, after concluding pacts putting Albania in Italy's sphere of influence, Zogu proclaimed himself King Zog 1.

In 1939, Italy occupied the country in a matter of days. During the Greco-Italian war of 1940-41, the Greek armies pushed the Italians back from the Albanian border and occupied a large part of southern Albania. When Germany attacked Greece and Yugoslavia in April 1941, however, the Greeks withdrew quickly, and the Axis occupation of Albania was complete.

Albania was free of the German yoke by the end of 1944, and a leftist provisional government under Colonel General Enver Hoxha was established. That regime was confirmed in power by subsequent elections, and British, Soviet and U.S. recognition. Since then, Albania has collaborated closely with the Soviet Union and Yugoslavia. Albania's international situation in 1947 was complicated. Greece was demanding the Albanian territory of northern Epirus. A United Nations inquiry was under way into assistance allegedly given by Albania, Bulgaria and Yugoslavia to anti-government Greek guerrillas. Following the mining of two British warships in the Corfu channel, Britain filed a complaint with the UN Security Council. When a U.N. inquiry committee failed to agree, Britain placed the matter before the International Court of Justice.

GOVERNMENT. Elections of Dec. 2, 1945 for the constituent assembly officially gave 95 percent of the votes to a Democratic Front of various resistance elements including some Communists. On Jan. 11, 1946, the assembly proclaimed Albania a republic with Hoxha as head of government, commander in chief of the armed forces and defense minister. The army, unofficially estimated at 60,000 men, in five low-strength divisions, maintains close liaison with the Soviet high command.

SOCIAL AND ECONOMIC CONDITIONS. Primary education is nominally compulsory, but illiteracy is high, especially among women. There are no institutions of higher learning.

Albanians are called Ghegs and Tosks according to whether they live north or south of the Shkumbi River. They live in clans or tribes, in the manner of medieval Europe.

Albania is still a primitive country where

each family tries to provide most of its own needs. Nearly the whole population is engaged in combined farming and stock-raising. Only a small portion of the central part is fit for tilling. Corn is the chief crop. Others are wheat, tobacco, oats, barley, rye, spelt, olives and citrus fruit. Only a few factories are engaged in processing Albania's food products.

Albania has had an adverse trade balance since World War I. The chief imports have been cotton and cotton goods, corn, benzine, woolen goods and petroleum; the main exports, wool, hides and furs, cheese, cattle, eggs and bitumen.

There are no railroads, but good highways were developed by the Italians for strategic purposes, and the Russians continued such construction. The principal and only fully equipped port is Durazzo.

Mineral wealth, thought to be considerable, is relatively unexploited. The principal minerals are aluminum and petroleum. There are also deposits of lignite, bitumen, asphalt, copper and iron.

Forest resources include large stands of oak, walnut, chestnut and elm, and in the high regions, beech, pine and fir. Almost all forests are owned by the communes and the state.

NATURAL FEATURES; CLIMATE. Albania is a mountainous state, largely over 3,000 ft. above sea level, with a narrow marshy coastal plain crossed by several rivers. A complex, often inaccessible mountainous hinterland encloses small fertile basins, and contains some wide valleys, of which the largest is that of Lake Ohrid in the southeast. The interior mountain plateaus and basins contain the centers of population. With the exception of the Bojana in the northwest, which is the outlet of Lake Scutari (135 sq. mi.) to the Adriatic, there are no navigable rivers.

The climate is typically Mediterranean, with dry, hot summers and moderate winters. Inland temperatures are lower than those on the coast. Winter frosts occur in the southern part of the country.

ARABIA

The Arabian peninsula, at the southwest extremity of Asia, is about four times the size of Texas. It was once a political unit, but today it consists of the kingdoms of Saudi Arabia and Yemen, the British colony of Aden and six British protectorates. The peninsula, with an area of about 923,000 square miles, and an extreme length of 1,400 miles, is generally a plateau sloping gently eastward from a mountain range that averages 5,000 feet in elevation and runs along its entire west side within ten or fifteen miles of the Red Sea. The

range reaches a maximum of 12,336 feet in Yemen to the southwest.

Arabia has no rivers and no forests and is principally a desert dotted with many oases. The big powers are interested in Arabia for two reasons—rich oil deposits; strategic stations on long airline routes.

Most of the peninsula, particularly the interior, has a hot desert climate with frequent changes in temperature. The highlands of the Yemen and southwestern Saudi Arabia, however, together with parts of Oman, have a temperate climate. Jidda, on the Red Sea, has an average daily high temperature of 93° during August.

Mohammed united all Arabs in the 7th century A.D., and his followers, led by the caliphs, founded a great empire with its capital at Medina. Later, the caliphate capital was transferred to Damascus and then Baghdad, but Arabia retained its importance because of the holy cities of Mecca and Medina. In the 16th and 17th centuries, the Turks established at least nominal rule over much of Arabia, and in the middle of the 18th century it was divided into separate principalities.

Through agreements with local rulers, the British extended their rule over the southern and eastern coasts in the 19th century. At the same time, the Wahhabis, a religious sect advocating strict adherence to Mohammed's teachings, placed their rule over most of central and eastern Arabia, and their work was the beginning of the present Saudi Arabia.

Political Divisions of Arabia

Name	Area (sq. mi.)	Population (est. 1938)
Aden colony (British)	80	65,000
Aden protectorate*	112,000	600,000
Bahrein Islands (Sultanate)*	213	89,970†
Kuwait (Sheikdom)*	1,930	50,000
Oman and Masqat (Sultanate)*	82,000	500,000
Qatar (Sheikdom)*	‡	‡
Saudi Arabia (Kingdom)	609,841	5,250,000
Asir	13,857	750,000
Hejaz	182,192	1,500,000
Nejd	413,792	3,000,000
Trucial Coast (Sheikdoms)*	‡	‡
Yemen (Kingdom)	75,000	3,500,000

*British protectorate. †Census 1941. ‡No reliable data.

Saudi Arabia (Kingdom)

The most important state of the peninsula is almost solely the creation of King Ibn-Sa'ud. In 1901, at the age of twenty, he seized the emirate of Riyadh and soon set himself up as the leader of the Arab nationalist movement. During World War I he collaborated with the famous T. E. Lawrence in the successful "desert revolt" against Turkey. On the collapse of Turkey

at the end of the war, he freed the whole peninsula from Turkish rule, and through a series of local military campaigns was able to proclaim himself King of Hejaz and Nejd and dependencies in 1927. His territories became the Kingdom of Saudi Arabia in 1932.

Hejaz and Nejd are still under separate administrations. In Nejd, whose capital is Riyadh, Ibn-Sa'ud's rule is absolute. The eldest of his numerous sons, Prince Sa'ud, acts as viceroy in his absence. The constitution of Hejaz, whose capital is Mecca, provides for a cabinet of ministers headed by the King's second son, Prince Faisal, who likewise acts as viceroy in his father's absence. There is a consultative legislative assembly in Mecca and various municipal village and tribal councils whose members are named or approved by the King.

The majority of the inhabitants are Bedouin—nomads following their flocks over the desert. There are a few large towns—Mecca, birthplace of the Prophet (80,000), Medina, site of the tomb of the Prophet (30,000), Jidda, port of Mecca on the Red Sea (40,000), and Riyadh, capital of Nejd (30,000).

In Hejaz, Medina produces dates in the oases, and fruit and honey; otherwise, its products are such desert commodities as camels, horses, sheep, hides, charcoal and wool. The most important commercial activity is the annual influx of Moslem pilgrims to Mecca and Medina. The products of Nejd include dates, wheat, barley, hides, wool, fruits, butter, camels and livestock.

Oil is produced by an American-owned company whose principal field is at Dharan near the Persian Gulf Coast. Production in 1945 skyrocketed to an estimated 19,943,000 barrels, over 40 times the 1938 figure; it increased further to an estimated 165,180 barrels daily in 1946. The company's expenditures and payroll constitute important invisible exports and the royalties paid to the government have greatly strengthened the kingdom's financial condition. Imports include coffee, motor vehicles, rice, sugar and tea.

There are no railroads and few motorable roads. Camel transportation prevails.

Kuwait (Sheikdom)

Kuwait, on the northwestern shore of the Persian Gulf, is an independent state ruled by Sheik Ahmed ibn Jabir al Subah. British protection, first exercised in 1898, has several times prevented it from being absorbed by Saudi Arabia. The territory surrounding Al Kuwait, its port, is largely desert; its trade consists of exchanging Arab goods from the interior for textiles, rice, sugar and other necessities. Kuwait's petroleum reserves, estimated at 9 billion barrels, are under concession to the Kuwait Oil Co. Production in 1946, 5,931,000.

Oman and Masqat (Sultanate)

Occupying the mountainous southeastern part of the peninsula, Oman is nominally an independent state under the rule of Sultan Sayyid Sa'id Taimur. It has been under British protection since early in the 19th century. The state is best known for its date cultivation, and its riding camels are considered the best in the world. Trade is mainly to and from India. The capital, Masqat (population 4,200) commands the entrance to the Persian Gulf.

Qatar (Sheikdom)

Qatar occupies the whole of the Qatar peninsula in the Persian Gulf. It is ruled, under British protection, by Sheik Abdullah ibn Jasim al Thani. The whole area is claimed by Saudi Arabia. Oil deposits have been found there.

Trucial Coast (Sheikdoms)

This area, extending along part of the Gulf of Oman and the southern coast of the Persian Gulf, is ruled by 7 semi-independent sheiks. Treaties signed with Britain in 1853 and 1892 provide that the sheiks will not cede or sell any part of their land to any other power.

Yemen (Kingdom)

The Yemen, an independent country under the rule of Saidi Imam Yahya Ibn Muhammad Ibn Hamid al-Din, occupies the southwestern extremity of the peninsula. Its sovereign status was confirmed by the Treaty of Sana with Britain and India (Feb. 11, 1934) and the Treaty of Taif concluded with Saudi Arabia at the cessation of hostilities between the two states on May 13, 1934. The people are permanently settled and are for the most part engaged in agriculture, fishing and trade. Chief products are Mocha coffee, and sheep and goat skins. Much of the trade goes through the port of Aden. The capital and principal town is Sana (population about 25,000).

Yemen was admitted to the U.N. in Sept. 1947.

Argentina (Republic)

(República Argentina)

Area: 1,079,965 square miles.

Population (census 1947): 16,107,930 (97% of European descent, chiefly Spanish and Italian; 3% Indian and other).

Density per square mile: 13.08.

President: Juan D. Perón.

Principal cities (1945 or latest official est.): Buenos Aires, 3,150,000 (capital and chief port); Rosario, 521,210 (flour milling); Avellaneda, 399,021 (industrial suburb of Buenos Aires); Córdoba, 339,375 (northwest farming center); La Plata, 256,378 (seaport; meat packing).

Monetary unit: Peso.

Languages: Spanish (official), Italian.

Religion: Roman Catholic (state-supported).

HISTORY. Latin America's stormy petrel of the World War II period, Argentina came into frequent diplomatic conflict with the United States because of her suspected pro-Axis sympathies. During the first two postwar years, however, she regained her international status, and in 1947 the United States began to resume full cordial relations with the Perón regime.

Discovered in 1516 by the Spaniard Juan Díaz de Solís, Argentina developed slowly under Spanish colonial rule. Buenos Aires was settled permanently in 1580 and became a prosperous city; the cattle industry of the Argentine pampas was thriving as early as 1600.

Invading British forces were expelled in 1806-07, and when Napoleon conquered Spain, the Argentinians set up their own government in the name of the Spanish king in 1810. On July 9, 1816, independence was formally declared. Internal dissension, particularly between Buenos Aires and the provinces, was put down under the dictator Juan Manuel de Rosas, who brought about unification from 1829 to 1852. Justo José de Urquiza, whose forces had ousted Rosas, was the first president under the 1853 constitution, which was modeled after that of the U.S.

Argentina made great material progress under Presidents Sarmiento (1868-74), Avellaneda (1874-80) and Roca (1880-86). The secret ballot was introduced in 1910 by President Roque Sáenz Peña.

President Hipólito Irigoyen (1916-22) refused to abandon Argentinian neutrality in World War I. Re-elected in 1928, Irigoyen, a radical, was ousted two years later by a conservative revolution led by General José Uriburu. The latter's successor, General Agustín Justo (1932-38) followed a moderate policy and undertook a large public works program. Under the leadership of a former radical, Roberto M. Ortiz, Argentina proclaimed neutrality at the outbreak of World War II, but in general cooperated in hemispheric defense programs.

Ortiz resigned because of illness in June, 1940, and was succeeded by Vice President Ramón Castillo, a conservative, whose regime was toppled in June, 1943, by a revolt led by General Pedro P. Ramírez. The latter abolished all political parties and broke relations with the Axis on Jan. 26, 1944, after disclosures of German spy activity in Argentina. A clique of army officers, apparently fearing that this would lead to war with Germany, replaced Ramírez on Feb. 24, 1944, with General Edelmiro Farrell.

During Farrell's regime, which was embarrassed by diplomatic non-recognition, Colonel Juan D. Perón soon emerged as the strong man. Striving to win recognition, the government made an eleventh-hour declaration of war against the Axis on March 27, 1945, and signed the Act of

Chapultepec the following April 4. Recognition by the United States came five days later, and Argentina ratified the United Nations charter on Sept. 8. The elections of Feb. 24, 1946, gave overwhelming victory to Perón, who was inaugurated president June 4, 1946. Perón's Five-year Plan, approved March 28, 1947, provides for wide administrative reforms as well as economic development and industrialization.

GOVERNMENT. Argentina is a federal union of fourteen provinces and nine territories. Normally a president and vice president are elected every six years by electors who are elected by direct male suffrage. The president appoints his cabinet. The vice president presides over the Senate but has no other powers. Neither is eligible for immediate re-election. The National Congress has two houses—a thirty-member Senate elected by the provincial legislatures for nine-year terms, and a 158-member Chamber of Deputies popularly elected for four years.

Each province has its own constitution, elected governor, legislature and judiciary, but the president may in a crisis take over the local government.

The president, with Senate approval, appoints for life-terms the judges of the federal supreme court, five courts of appeal, and district courts (at least one in each province).

DEFENSE. Under legislation enacted Nov. 29, 1946, all men and women 12 to 50 are subject to military service at the president's discretion. Service from 20 to 22 is compulsory. Active army strength in 1947 was estimated at 100,000; a complete modernization program was under way.

Much of Argentina's military equipment is obsolescent. Because of its attitude during most of World War II, it was the only Latin American nation that received no U.S. military lend-lease goods. The air force has about 150 combat planes. The navy in 1947 totaled approximately 95,300 tons, including two modernized battleships, three light cruisers and 11 destroyers. The budgetary allotment for defense is 37 percent.

EDUCATION. Argentina's estimated illiteracy rate of 15 percent is the lowest in all Latin America. Education is free, secular and compulsory between six and fourteen. Enrollment in 1946 was estimated at 2,000,000. There are six universities, of which the most important is that of Buenos Aires. All were seized by the government in 1946 for alleged interference in politics.

AGRICULTURE. A farming and stock-raising nation, Argentina devotes 41 percent of its area to pasture and 11 percent to cultivation. More than 70 percent of the cultivated land is planted in cereals—wheat, corn, linseed and oats. About 20 percent is in alfalfa for stock feed. Cotton, sugar cane and fruits are important, and

Argentina is the world's largest producer of yerba maté (Paraguay tea), the national beverage. The 1946 wine production of 234,000,000 gallons was slightly below normal.

Wheat production in 1946 was estimated at approximately 200,000,000 bu. The production of oats in 1944 was 75,694,000 bu.; corn, 116,745,000 bu.; cotton, 333,000 bales of 478 lb. net.

There were in 1945 a total of 58,180,000 sheep, 3,127,680 goats, 34,010,000 cattle and 8,100,000 hogs. Cattle raising predominates on the pampas, especially in Buenos Aires province. Sheep raising is more important in Patagonia. Livestock slaughtered in 1945 included cattle, 6,245,000; sheep, 14,021,000; hogs, 4,750,000. The 1946 wool clip was estimated at 230,000 tons. Cattle hide and kips exports in 1945 were 4,137,285 (70 percent to Britain).

MANUFACTURING. Industrial expansion was accelerated during World War II by the shortage of imports, but industry is still closely allied to agriculture. The principal industry is meat refrigeration, followed by flour milling, textiles, sugar refining, dairy products, quebracho extraction and wine. In 1941 there were 57,940 industrial establishments with 852,154 workers; products were valued at 6,337 million pesos (7,800 million in 1943). Most of the meat packing plants are controlled by U.S. and British interests.

TRADE. Foreign trade during World War II was notable for low-volume imports and low-quantity but high-value exports.

VALUE OF TRADE IN PAPER PESOS

Year	Imports	Exports
1943	942,048,436	2,192,264,055
1944	1,007,154,000	2,352,881,000
1945	1,154,001,730	2,485,219,642
1946	2,330,300,000	3,937,400,000

Meat exports constituted about one-third of all 1946 exports in value, followed by wheat, hides and skins, wool and forest products. Exports went principally to Britain (21.9 percent), United States (15.0 percent), France (10.6 percent), Belgium and Brazil. Sources of imports were U. S. (29.8 percent), Brazil (15.0 percent), United Kingdom (13.8 percent), Sweden and Dutch Caribbean possessions. The leading imports were textiles, chemical products, fuels and lubricants, foodstuffs and machinery.

COMMUNICATIONS. The merchant fleet in 1943 consisted of 4,079 ships of 455,807 tons, about 35 percent of which was government-owned. The chief ports are Buenos Aires, second only to New York in the western hemisphere, and La Plata, both on the Plata estuary; and Rosario, a port on the Paraná River.

Railway mileage in 1946 was 26,384, nearly all of which radiates outward from Buenos Aires. With the purchase on Feb.

13, 1947, of the British-owned railways for £150,000,000, the system is now government-owned. Highway mileage in 1946 was estimated at 254,370 miles, largely unimproved. Telephones in 1945 totaled 493,055; broadcasting stations 72 (1946), and radio sets 1,250,000. Five principal airlines are in operation and extend as far south as Tierra del Fuego. Direct international connections exist with neighboring countries.

FINANCE. The proposed 1948 budget balances the ordinary and extraordinary budgets at 3,092,000,000 and 1,146,000,000 pesos respectively. The national internal debt (Nov. 30, 1946) was 10,436,900,000 pesos, while the external debt was 11,100,000 pesos in pounds, 144,300,000 pesos in dollars and 83,400,000 pesos in Swiss francs. British investments in 1946 were £356,212,589, with about 75 percent in railways (the latter interests were purchased by the government in 1947). U. S. investments in government obligations in 1943 were \$310,596,310, while direct investments in industry in 1940 were \$387,945,000.

TOPOGRAPHY. Second in South America to Brazil in size and population, Argentina is about 2,070 miles long and 860 miles wide at the maximum. In general, the country is a plain, rising westward from the Atlantic to the Chilean border and the towering Andes peaks, including Aconcagua, 23,080 feet, the highest peak in the world outside Asia. The northern area of the Argentine plain is the swampy and partly wooded Gran Chaco. South of that to the Rio Negro is the rolling, fertile Pampas, rich for agriculture and grazing, and supporting most of Argentina's population. Next southward is Patagonia, a region of cool, arid steppes with some wooded and fertile sections. The eastern part of Tierra del Fuego, the island southern tip of South America, belongs to Argentina.

CLIMATE. Except for the northern Gran Chaco, which has mild winters and torrid summers, Argentina lies in the south temperate zone. The pampas region has an average temperature of 60°, and freezing is rare. Temperature extremes increase progressively southward. All over Argentina, January is the warmest month and June and July the coolest. At Buenos Aires, the mean annual temperature in January-February is about 73°; in June-July, 50°. The heaviest rainfall, over sixty inches a year, hits the Gran Chaco, while on the pampas it ranges from twenty inches in the west to forty in the northeast.

RIVERS. The three great rivers forming the Plata system—the Paraná, Paraguay and Uruguay—are important commercial arteries in northern Argentina. Rosario and Santa Fé, 260 and 360 miles respectively above Buenos Aires on the Paraná, are accessible to ocean vessels. Many other

river ports lie along the three streams' total navigable length of 1,997 miles.

MINERALS. Argentina must import most of nearly every mineral it uses. Oil is produced in Patagonia (1946: 20,924,246 barrels), and there is small mining of tungsten, lead, gold, zinc, tin, silver and beryllium. The government announced discovery of uranium deposits in Feb., 1947. All mineral production in 1942 was valued at 214,300,-730 pesos, of which oil accounted for more than 60 percent. Coal imports in 1945 came to 779,803 long tons.

FORESTS. The Gran Chaco area is the world's chief source of quebracho extract. Total production of this tanning agent obtained from quebracho logs was, in 1945, 223,817 tons, of which 192,614 tons were exported. Other forest products—hardwoods, dyewoods, lignum vitae, red quebracho, medicinal gums and other tannins—are consumed locally for the most part.

Austria (Republic)

(Österreich)

Area: 34,062 square miles.

Population (census 1939): 6,694,782 (practically all Austrian).

Density per square mile: 196.6.

Allied Council: Lt. Gen. Geoffrey Keyes (U. S. A.); Col. Gen. L. V. Kurasov (U.S.S.R.); Lt. Gen. Sir J. S. Steele (United Kingdom); Lt. Gen. Emile-Marie Bethouart (France).

President: Dr. Karl Renner.

Chancellor: Leopold Figl.

Principal cities (census 1939): Vienna, 1,918,-462 (capital, industrial center); Graz, 210,175 (industrial center); Linz, 131,423 (Danube port); Innsbruck, 80,084 (Tyrolean tourist center).

Monetary unit: Schilling.

Language: German.

Religions (est.): Roman Catholic, 93.68%; Protestant, 3.11%; Jewish, 2.93%; unknown, .28%.

HISTORY. The history of Austria before 1818 is largely that of the Austro-Hungarian Empire and the Hapsburg dynasty. Its origin was in the province of Ostmark, separated from Bavaria and given to Leopold of Babenberg (A. D. 976) by the Holy Roman Emperor, Otto II. It was ruled by the Babenbergs until 1246, and later passed to Ottakar of Bohemia, who lost it to Rudolf of Hapsburg (1276). In 1437, the three kingdoms of Austria, Hungary and Bohemia were united under the rule of Albert V. For three centuries thereafter, despite almost constant warfare, the states remained for the most part under a single crown. The Hapsburgs gradually added to their possessions, until Charles V, during the 16th century, ruled a vast part of Europe. Emperor Francis I laid down the Holy Roman crown in 1806 at the height of the Napoleonic Wars, in which Austria with

her allies was finally victorious. Influence in Germany was lost through defeat by Prussia in the Seven Weeks' War (1866). In 1867, the Dual Monarchy of Austria and Hungary was established, united in the person of the sovereign, Franz Josef I, who ruled until 1916.

Following the defeat of the Central Powers in World War I, the republic of Austria was established in Nov., 1918. It was confined to its present borders by the Treaties of St. Germain (1919) and Trianon (1920). The years immediately following the war were a period of privation, dissension and riots, with Austrian currency becoming worthless and the nation bankrupt. Establishment of a semi-dictatorship by Engelbert Dollfuss, who had become Chancellor in 1932, was followed by an unsuccessful Socialist revolt (Feb., 1934) and an attempted Nazi coup d'état which failed, although Dollfuss was killed. He was succeeded by Kurt von Schuschnigg, whose futile efforts to maintain Austria's independence ended (March 12, 1938) with the bloodless occupation of Austria by German troops. Hitler proclaimed the *Anschluss* of Germany and Austria the next day.

Following the liberation of Vienna by the Red Army (April 13, 1945) a coalition (Socialist, Communist, Catholic) government was established under the chancellorship of Dr. Karl Renner, a veteran Socialist. Elections held Nov. 25, 1945, resulted in victory for the People's Party, whose leader, Leopold Figl, became chancellor. Dr. Renner was elected president of the Second Austrian Republic (Dec. 20, 1945).

The failure of the Big Four to draft a treaty with Austria at the Moscow Conference (April, 1947) dashed her hopes for immediate independence and for the evacuation of Allied occupation troops. Inability to agree on a definition of German assets was a major stumbling block at the conference, with the U.S.S.R. apparently insisting that all German-owned assets in Austria, even if obtained by force after the *Anschluss* from Austrians or citizens of other states, should be made available for reparations. Yugoslav demands for reparations from Austria and for cession of "Slovene Carinthia" and parts of Styria also contributed to the deadlock.

ALLIED MILITARY GOVERNMENT. Austria was occupied (1945) by the Soviet Union, the U. S., Britain and France. An Allied Council was set up to establish the independent government pledged at Moscow in Nov. 1943. The country within its 1937 frontiers is divided into four national zones, as is the city of Vienna. The Allied Council and the inter-Allied governing authority of Vienna consist of the ranking officers of the four participating nations. By an agreement signed by the four powers June 28, 1946, giving the government power

to enact domestic legislation, the Council's functions became supervisory rather than administrative.

NATIONAL GOVERNMENT. Austria is a federal republic comprised of nine provinces (including Vienna), each of which has its own elected assembly for the control of regional affairs. The federal parliament consists of two houses—the *Bundesrat* whose members are nominated by the provincial assemblies and the *Nationalrat* whose 165 members are chosen by national election. The president of the republic is elected by parliament in joint session for a six-year term. The government is administered by the chancellor and his cabinet.

Allied occupational troops in mid-1947 were estimated at from 9,000 to 12,000 U. S., 30,000 to 50,000 Soviet, 15,000 to 25,000 British and 7,000 French.

SOCIAL AND ECONOMIC CONDITIONS. Definitive postwar statistics for Austria are for the most part unavailable. Agriculture employs more than one-third of the population but the country is heavily dependent on imported foodstuffs. About 90 percent of the total area is classified as productive; of this area, about 41 percent is intensively cultivated as plowland, meadowland, gardens and vineyards. The amount under plow is relatively small, and mixed farming predominates. Production of rye, the leading cereal, amounted to 476,000 metric tons in 1937, followed by wheat, 400,000, barley, 288,000, and oats, 287,000. Potato production totaled 3,612,000 tons and sugar beets, 1,008,000 tons. Other crops include hops, grapes, flax, fruits and tobacco. The vine, absent only in Salzburg, Tyrol and Upper Austria, reaches its finest quality in the sheltered Rhine Valley and the warm eastern valleys. Average annual wine production (1931-42) was 23,500,000 gallons.

Stock raising and dairy farming both in the Alpine pastures and the lowlands of the east were of increasing importance prior to World War II. Crop production in 1946 was estimated to be sufficient to meet little more than 50 percent of the country's needs, and large-scale food imports were planned for 1947. Exports in 1946 were 215,000,000 shillings; imports, 191,000,000.

Austria is primarily an industrial country, but facilities have been depleted by war damage and by Soviet reparation removals. Fuel and raw material shortages also hampered recovery in 1947. Most important are the metallurgical and engineering industries. Styria is responsible for almost all the iron and steel production. The working of timber and its derived products is important.

Legislation providing for the nationalization of 70 firms, comprising a substantial portion of Austrian basic industry,

was enacted late in 1946. Most of the industrially important regions are in the Soviet zone.

The constantly unfavorable prewar trade balance was offset in part by international loans and in part by invisible exports, such as tourist expenditures, income from foreign investments and the large transit trade.

The construction of railways and roads has been hampered by physical difficulties. There are more than 4,000 miles of railway line, partly electrified. Water traffic is restricted for the most part to the Danube River. The major river ports are Linz and, especially, Vienna, which is also an important rail, road and air center.

NATURAL FEATURES AND RESOURCES; CLIMATE. Austria covers an area about equal to that of Scotland and includes much of the mountainous territory of the eastern Alps (about 92.3 percent of the country is classified as mountainous). From the Rhine Valley, Austria's western frontier, these ranges cross the country from west to east, merging on the north and northeast into the Danube Valley and the open Vienna basin. On the east and southeast, the ranges merge into the forested foothills overlooking the undulating countryland of western Hungary. The country contains much beautiful scenery, including many snowfields, glaciers and snow-capped peaks. The principal river, the Danube, enters Austria in the northwest and crosses the northern part of the country.

Austria possesses valuable mineral resources. In Styria lies one of the largest European deposits of iron ore. Copper is mined in Salzburg, Tyrol and lower Austria, and lead and zinc in Carinthia. Other minerals include bauxite, graphite, sulfur and manganese. Fuel resources comprise small coal deposits in lower Austria and large quantities of lignite, found everywhere except in Salzburg. Heavy supplies of coal and coke must be imported, but extensive water power resources are available for exploitation. Petroleum fields in the Zistersdorf and Mühlberg areas, both in the Soviet zone, produced an estimated 5,922,000 barrels in 1946. Return to normal production has been retarded by Soviet seizure of essential equipment on the ground that it was enemy-owned.

Variety is the keynote of Austria's climate. The mean annual temperature in the north ranges between 45° and 48°, and in no month does the average exceed 68°. Most of the rainfall occurs during summer. In the Tyrol, mild winters and warm summers (with temperatures often higher than 68°) are customary; maximum precipitation is in spring and summer. The mean annual temperature of Vienna is 49.4°, and the range about 40°.

Belgium (Kingdom)

(Belgique—Koninkrijk België)

Area: 11,775 square miles.

Population (est. 1946): 8,355,232 (Walloon, Flemish).

Density per square mile: 709.6.

Sovereign: King Leopold III.

Regent: Prince Charles, brother of the King.

Prime Minister: Paul-Henri Spaak.

Principal cities (est. 1945): Brussels, (Bruxelles), including suburbs, 1,282,438 (capital); Antwerp (Anvers), 767,619 (port and commercial center); Liège, 534,725 (iron and steel); Ghent (Gand), 435,278 (textiles).

Monetary unit: Belgian franc.

Languages: French, Flemish.

Religion: Predominantly Roman Catholic.

HISTORY. In 1914 and again in 1940, Belgium was crushed by German armies because its position in the Low Country area made it a highway on the invasion route to France. Highly industrialized, a bit larger than Maryland, Belgium emerged from World War II in fair economic condition but, politically, the country suffered crisis after crisis in the struggle between conservatives and elements of the left, especially over the return of King Leopold III to the throne.

Perhaps the earliest mention of the Belgians in history was in 57-50 B.C., when they were conquered by Julius Caesar. In the Middle Ages the Belgian towns became wealthy and virtually autonomous as great textile centers. Belgium became part of Burgundy in 1385, and later, part of the Spanish domains of Charles V. By the Treaty of Utrecht, in 1713, Belgium went to Austria, though retaining its autonomy, and from 1792 to 1815 it held a similar status under France. United with the Kingdom of the Netherlands by the Congress of Vienna in 1815, the Belgians revolted and proclaimed independence on Oct. 4, 1830, choosing as their sovereign Leopold of Saxe-Coburg. Taking the title of King Leopold I, he ruled from 1831 to 1865.

Belgium progressed peaceably in the 19th century under Leopold I and his son, Leopold II, who reigned from 1865 to 1909, and was succeeded by his nephew, Albert I (1909-34).

Despite heroic Belgian resistance under the personal leadership of Albert, the country was overrun by the Germans in 1914 and occupied throughout World War I. The peace settlement in 1919 gave Belgium the regions of Moresnet, Eupen and Malmédy, and a mandate over Ruanda-Urundi in Africa.

As World War II approached, Belgium strove to protect its legal neutrality; at the same time the nation rearmed rapidly and built a strong series of fortifications, es-

pecially along the Albert Canal. But these defenses were no great obstacle to the Germans, who invaded the country for the second time in a generation on May 10, 1940.

King Leopold III, who had succeeded his father upon the latter's death in a mountain-climbing accident in 1934, ordered the Belgians to surrender to the Nazis and was taken prisoner on May 28, 1940—eighteen days after the initial German attack. From the point of view of Belgium alone, his action was regarded as perhaps sensible, but the abrupt end of Belgian resistance contributed to the entrapment of the British and French at Dunkirk. The cabinet of Hubert Pierlot escaped from the country and set up a government-in-exile in London. When that government returned to Belgium on Sept. 7, 1944, King Leopold's brother, Prince Charles, was elected regent (Leopold was still a prisoner). Pierlot, a Catholic, became head of a coalition government. He was succeeded in Feb., 1945, by Achille van Acker, a Socialist, whose principal problem aside from reconstruction was the status of Leopold. The latter's return from Switzerland was opposed by a Liberal-Socialist-Communist coalition.

The Christian Socialists (Catholics) won a plurality in the elections of Feb. 17, 1946. Because of their pro-Leopold stand, however, they could not take office. The country was ruled by the Liberal-Socialist-Communist cabinets of Van Acker (Mar. 31, 1946) and Camille Huysmans (Aug. 2, 1946) until March, 1947, when Socialist Paul-Henri Spaak formed a Socialist-Christian Socialist coalition cabinet.

King Leopold III was born in 1901; in 1926 he married Princess Astrid of Sweden. They had three children, of whom Prince Baudouin (born 1930) is heir apparent. Astrid was killed in 1935 in an automobile accident. On Sept. 11, 1941, while he was a German prisoner, Leopold married a commoner, Marie Baelis, daughter of a former cabinet member. She renounced the title of queen upon marriage, and became Princess de Réthy. The regent, Prince Charles, was born in 1903.

GOVERNMENT. Under the 1831 constitution, Belgium is a constitutional, hereditary monarchy. The king's authority is delegated to the ministers whom he appoints and dismisses to conform with the parliamentary majority. The ministers who constitute the cabinet must have the confidence of parliament, which consists of a 202-member chamber of deputies popularly elected, and a senate of varying membership, elected both directly and indirectly. All members serve for four years unless one or both houses are dissolved by the king, in which case new elections must be held in forty days. Belgium's nine provinces and 2,670 communes have crown-appointed

officials but retain considerable autonomy with locally-elected councils.

Judges are appointed for life. The highest appellate court is the Cour de Cassation at Brussels; there are three regional courts of appeal.

The home army in 1947 was unofficially estimated at 58,000 men, organized in one army corps of two divisions. In the British zone of Germany, Belgium had 30,000 men, while the Belgian Congo was garrisoned by 17,000 men in three brigades. The air force has about 110 combat planes. The navy, abolished in 1928, is now being reformed, with a contemplated 2 or 3 frigates, 8 minesweepers, and 12 fast launches.

EDUCATION. Education, free and universal for children from six to fourteen, is under state control in three divisions: primary, intermediate and higher. Primary schools in 1938 numbered 8,712 with 955,038 students; intermediate schools, 273 with 86,279 students. There are four universities: official, Ghent and Liège; unofficial (private), Brussels and Louvain. There are also private schools, many under religious auspices.

AGRICULTURE. Principal crops in 1945 in bushels were oats, 25,293,000; rye, 5,935,000; wheat, 11,381,000 and barley, 5,196,000. Beet sugar production in 1946 was 233,288 metric tons. Other crops are fodder beets, root crops, flax and garden fruits. The pastoral industry, especially dairy farming, also flourishes. Butter production in 1945 was 17,900 short tons; cheese, 6,280 tons. Crop production in 1947 approached, and in some cases exceeded, prewar levels.

MANUFACTURING. Belgium is one of the most highly industrialized nations in Europe, largely because of vast, readily accessible coal reserves. Industry has not advanced, however, at the expense of agriculture; the Belgian economy is based on both. According to the last industrial census, in 1930, there were 220,871 industrial establishments with 1,938,000 workers (almost 25 percent of the population), led by the metallurgical, textile and building industries in that order. Associated with iron and steel is a considerable engineering industry, shipbuilding in Antwerp, and machinery and railway stock in Brussels. The centuries-old textile industry produces linen (Courtrai); cotton (the southeast); and synthetic fibers. Antwerp, using the output of mines in the Congo and Angola, rivals Amsterdam in diamond cutting.

Exports (merchandise) in 1945 totaled \$90,981,700 and imports \$314,390,000. Leading exports include textiles, chemical and pharmaceutical products, machinery, precious stones and wrought iron. Prior to World War II about one-half of the foreign trade was conducted with France, Britain, Germany and the Netherlands. There is a considerable transit trade to central Europe, chiefly through Antwerp.

COMMUNICATIONS. Inland transportation facilities are highly developed. Railroad mileage in 1945 was 3,090. Navigable waterways total 998 mi., including the well-developed canal system. Before World War II Belgium had the second largest river fleet on the Rhine. In 1938 almost 25,000,000 tons of shipping entered the chief port, Antwerp. Highway mileage in 1945 totaled 6,433, mostly improved. The Belgian merchant fleet in 1939 totaled 200 ships of 408,000 tons; war losses totaled 313,000 tons.

FINANCE. Revenues in 1946 were estimated at \$1,328,000,000 and expenditures at \$1,603,000,000. The public debt on Aug. 31, 1946 was \$8,662,054,000. Gold reserves in 1946 were \$765,000,000.

NATURAL FEATURES AND RESOURCES; CLIMATE. The northern third of Belgium is a plain extending eastward from the coast of the North Sea. North of the Sambre-Meuse Rivers is a low plateau, varying from 250 to more than 600 feet in height, and to the south lies the Ardennes plateau, rising to a maximum of about 2,300 feet. The shallowness of the North Sea off Belgium precludes the development of good harbors; some of the port advantages of Antwerp, on the Schelde River, are offset by the fact that the approaches to it are through Dutch territory.

Ostend, on the sea, has an average annual temperature of 49° and annual rainfall of 27.5 inches, like Chicago. Baraque Michel, in the Ardennes heights, has an average temperature of 43°, rainfall of 59.5 inches, and considerable snow in the winter.

The principal mineral is coal; production in 1945—17,330,000 short tons—was about half the 1939 figure. By 1947, however, coal production approached prewar figures. The Ardennes coalfield, now nearly exhausted, extends southward into France. The Campine field, comparatively new, lies in the northeast. Iron ore, lead and zinc also are mined, principally in the Ardennes. Belgian mining, highly developed, normally employs about 200,000 people.

Forests cover about 20 percent of Belgium, but their products are relatively unimportant. Fishing is vital in the economy. The 1946 catch was 77,000 short tons.

Belgian Colonial Empire

Country	Area (sq. mi.)	Population (est. 1946)
Belgian Congo (colony)	902,040	10,486,291
Ruanda-Urundi (mandate)	21,230	3,388,000

BELGIAN CONGO (CONGO BELGE). Status: Colony. Capital: Léopoldville (population 1938: 35,946; 1946, whites only: 5,385). Governor General: Eugène Jungers. Foreign trade (1944): exports 4,620,548,000 francs; imports 2,478,408,000 francs. Agricultural products (short tons): cotton

(1944) 56,000; coffee (1942) 36,376; sugar (1943) 15,983. *Minerals*: copper (1945) 186,376 short tons; diamonds, mainly industrial (1945) 7,567,000 carats; gold (1945) 381,000 oz.; manganese ore (1945) 11,119 short tons; silver (1945) 2,500,000 oz.; tin ingots (1945) 19,100 short tons. *Forest products* (1945, short tons): palm oil, 85,733; palm kernels, 98,103; rubber, 8,788. Most of the above figures include production of Ruanda-Urundi also.

The mineral-rich Belgian Congo, in central Africa, with a narrow outlet to the Atlantic through the northwestern tip of Portuguese Angola, was acquired Nov. 15, 1908, by the Belgian state from the Belgian king, Leopold II. The latter had backed exploration of the area by the English explorer, H. M. Stanley, and in 1885 had been recognized by the great powers as personal sovereign and proprietor of the Congo Free State, as it was then called. The area is now administered by a governor general responsible to the cabinet minister for the colonies. The governor general has unrestricted executive and legislative powers, and the colony has no representative institutions of its own. During World War II it furnished many vital war materials to the United Nations. The European population in 1946 was 33,787.

RUANDA-URUNDI. *Status*: U.N. trusteeship united administratively with the Belgian Congo. *Capital*: Usumbura. *Governor General*: Eugène Jungers. *Foreign trade* (1943): exports 228,728,000 francs; imports 136,776,000 francs. *Principal products*: tin, coffee, gold, cotton, hides.

Ruanda-Urundi, in east Africa, was assigned to Belgium as a mandate by the League of Nations at the end of World War I, before which it was a portion of German East Africa. It is administered under the direction of the governor general of the Belgian Congo by a vice governor general. The territory, placed under U.N. trusteeship in Dec., 1946, is largely mountainous, with livestock grazing the principal activity.

Bolivia (Republic)

(República Boliviana)

Area: 416,040 square miles.

Population (est. 1944): 3,533,900 (52% Indian, 28% Mestizo, 13% white, .2% Negro, 6.8% unspecified).

Density per square mile: 8.5.

President: Dr. Enrique Herzog.

Principal cities (est. 1946): La Paz, 301,000 (de facto capital); Cochabamba, 80,000 (commercial center); Oruro, 50,000 (tin mines); Potosí, 40,000 (mining); Sucre, 32,000 (legal capital).

Monetary unit: Boliviano.

Language: Spanish.

Religion: Roman Catholic.

HISTORY. Famous since Spanish colonial days for its mineral wealth, modern Bolivia was once a part of the ancient Incan Empire. After the Spaniards had defeated the Incas during the first part of the 16th century, Bolivia was subjected to the Spanish Viceroyalty of Peru, and its predominantly Indian population was reduced to slavery. During the successive South American revolts against Spain in the early 19th century, Upper Peru (as Bolivia was then called) was a vast battlefield contested by Spanish and patriot troops. The country finally won its independence in 1825; the new republic was named after Simón Bolívar, South America's famed liberator.

Bolivia's political history since independence has been extremely stormy, even by the standards of a continent noted for its preference of bullets to ballots. Since 1825 it has had more than sixty revolutions, seventy presidents and eleven constitutions. No elected president has ever served out his term.

Harassed by internal strife, Bolivia lost great slices of territory to three neighbor nations. Several thousand square miles and its outlet to the Pacific were taken by Chile after a disastrous war in 1879-83. In 1903 a piece of Bolivia's Acre province, rich in rubber, was ceded to Brazil. And in 1938, after a war with Paraguay, Bolivia gave up claim to nearly 100,000 square miles of the Gran Chaco.

The last decade has been typical of Bolivia's turbulent political history, with four illegal seizures of power culminating in a leftist revolution on July 21, 1946, which overthrew the rightist regime of Lt. Col. Gualberto Villarroel, who in Dec., 1943, had ousted the legally elected president, Gen. Enrique Peñaranda. Villarroel was murdered by a mob which stormed the presidential palace. Elections held Jan. 5, 1947, gave none of the presidential candidates an absolute majority. The slight plurality of Dr. Enrique Herzog, candidate of the Socialist Republican Union, a center group, was endorsed by Congress and he took office for a four-year term on March 10, 1947.

GOVERNMENT. Under the 1938 constitution, Bolivia is a republic, electing by popular vote a president every four years, a 27-member Senate every six years, and a 111-member Chamber of Deputies every four years. The president appoints the nine members of his cabinet. The Indian majority is virtually disfranchised, and less than 3 percent of the population voted in the 1947 presidential elections.

Military service is compulsory, with a two-year training period beginning at nineteen and service on reserve until fifty. The army is fixed by law at 15,000, but falls several thousand short of this number. The

air force is being re-organized and trained by American officers. In 1946, about 30 percent of the national budget was allocated to defense.

SOCIAL AND ECONOMIC CONDITIONS. Bolivia has an illiteracy rate estimated in 1946 at 80 percent, highest in Latin America. A contributing factor is the high proportion of pure Indian population. In 1942 enrollment at 1,766 primary schools was 160,283, and at 77 intermediate schools, 1,255. There are five universities and several normal schools and educational centers for Indians. In 1946 the government began re-organizing the curriculum for rural schools.

Mining is the backbone of the economy. Tin, accounting normally for 70 percent of Bolivian exports, is by far the most important today, most of it coming from the plateau regions of Potosí and Oruro. In normal times, Bolivia is the world's third largest tin producer; during World War II and immediately after, it was first.

Mineral production for 1945 was as follows: tin, 47,600 short tons; silver, 6,680,000 ounces; gold, 29,000 ounces; copper, 6,700 short tons; antimony, 5,600 short tons; tungsten concentrates, 4,240 short tons; and zinc ore, 23,200 short tons. Lead, manganese ore and mercury are also produced. Southern Bolivia is rich in oil, as yet relatively unexploited. Production in 1946 was 362,659 barrels.

The 5,000,000 acres under cultivation produce wheat, rice, sugar, potatoes, cacao, barley, maize, coca (source of cocaine), tobacco and cotton. Production of such basic foodstuffs as wheat and rice, however, is insufficient for domestic needs, and considerable quantities must be imported. Cattle are raised in the more temperate regions of the east and south, sheep in the departments of La Paz and Cochabamba, and llamas, alpacas and vicuñas, important sources of hides, wool and meat, are raised on the plateaus by Indians whose economy is largely dependent upon them. The fur-bearing chinchilla, a native of the colder plateau regions, is also bred.

Manufacturing received considerable impetus during the Chaco War, but the output is insufficient to supply the domestic demand. Almost three-fourths of the manufacturing is carried on in La Paz. Major manufactures in 1941 had a value of \$11,298,280, led by foodstuffs, beverages and textiles. Imports in 1944 were \$37,451,323 and exports \$77,498,035. The principal supplier was the United States, followed by Argentina and Peru. Exports consist almost entirely of tin and other minerals. Since Bolivia is landlocked, foreign trade must pass through free ports in Chile and river ports on the Amazon.

From its lowland tropical forests, Bolivia gets rubber, quinine bark, almonds and brazil nuts, dyewoods, mahogany, que-

bracho and other hardwoods. Rubber exports in 1945 were 4,500 short tons.

Railway mileage totals 1,407, all in western Bolivia; the principal lines connect La Paz with the Chilean ports of Arica and Antofagasta. Highway mileage in 1945 was 3,710, much of it unimproved. Airlines play an important role in Bolivian transportation: national airlines, including the Lloyd Aéreo Boliviano, covered 3,495 route miles in 1943, and Pan American Airways links the country with the rest of the Americas. In the lowlands, thousands of miles of navigable streams are the chief means of transportation.

The 1947 ordinary budget balanced at approximately \$27,140,000.

NATURAL FEATURES AND CLIMATE. Landlocked Bolivia is a low alluvial plain throughout 60 percent of its area toward the east, drained by the Amazon and Plata river systems. The western part, enclosed by two chains of the Andes, is a great plateau—the Altiplano—measuring 500 by 80 miles at an average altitude of 12,000 feet. More than 80 percent of the population lives on the plateau, which also contains La Paz, the highest capital city in the world. Lake Titicaca, half the size of Lake Ontario, is one of the highest large lakes in the world, at an altitude of 12,507 feet. Islands in the lake hold ruins of the ancient Incan civilization.

The climate varies from the humid heat of the equatorial lowlands in the east to the arctic cold of the Andean peaks. In the lowlands, the average temperature is about 77°, with no great departures; rainfall is heavy throughout the year. At higher elevations in the west (to 11,000 ft.) the climate is temperate, with occasional winter frost. In the great central plateau, the weather is always cool. In La Paz it averages about 50.4°.

Brazil (Republic)

(Estados Unidos do Brasil)

Area: 3,291,416 square miles.

Population (est. 1945): 45,300,000 (white, 63%; Mestizo, 21%; Negro, 14%; Indian and other, 2%).

Density per square mile: 13.8.

President: Eurico Gaspar Dutra.

Principal cities (census 1940): Rio de Janeiro, 1,563,787 (est. 1945, 1,951,900) (capital and chief port); São Paulo, 1,253,943 (coffee growing center); Recife (Pernambuco), 327,753 (seaport); São Salvador (Bahia), 293,278 (seaport); Porto Alegre, 262,694 (seaport); Belo Horizonte, 179,770 (mining); Belém (Pará), 208,706 (port for Amazon shipping).

Monetary unit: Cruzeiro.

Languages: Portuguese (official), Italian, German.

Religion: Roman Catholic, 95%.

HISTORY. Brazil, the only Latin American nation deriving its culture and language from Portugal, is by far the largest country in South America, covering nearly half the continent. In the Western Hemisphere it is second to Canada. In the world, it ranks after the U.S.S.R., China and Canada.

Brazil was discovered in 1500 by the Portuguese admiral, Pedro Alvares Cabral. Portuguese colonization efforts began in 1532 and Brazil became a royal colony seventeen years later. The later attempts of France and Holland to colonize Brazil were defeated by the Portuguese.

During the Napoleonic wars, the prince regent of Portugal (later King John VI) fled his country in advance of the French armies, and set up his royal court at Rio de Janeiro in 1808. John was drawn home by a revolution in 1820 and the Brazilians, after holding the seat of Portuguese government, rebelled at resuming colonial status and declared their independence in 1822 under Pedro, son of John VI. Harassed by trouble with his parliament, Pedro I abdicated in 1831 in favor of his five-year-old son, who became emperor in 1840 as Pedro II. He proved to be an enlightened and popular monarch, perhaps the most progressive in Brazilian history.

Despite his good works, however, Pedro II was forced to abdicate in 1889 following a military revolt, after which a republic was set up. Until 1893 Brazil was under two military dictators, Marshal Deodoro da Fonseca and Marshal Floriano Peixoto. After a revolt against the latter in 1893, Brazil returned gradually to stability under a succession of five civilian presidents—Prudente de Moraes Barros, 1894-98; Manuel Ferras de Campos Salles, 1898-1902; Francisco de Paula Rodrigues Alves, 1902-06; Afonso Penna, 1906-09, who died in office; and Nilo Pecanha, 1909-10.

The president during World War I, Wenceslau Braz, cooperated with the Allies and declared war on Germany Oct. 26, 1917. Reckless expenditure marked the term of the next chief executive, Epitacio da Silva Pessoa, 1919-22, while the presidency of Arthur Bernardes, 1922-26, was bedeviled by financial difficulties and army dissension. His successor, Washington Luis Pereira da Souza, 1926-30, had to cope with the world depression and was deposed by a revolutionary group under Getulio Vargas, who took over as provisional president.

Vargas' new constitution in 1934 sharply curtailed state's rights and emphasized a nationalistic policy. In 1937 Vargas seized absolute power, setting up another constitution which extended his term of office indefinitely. In World War II, Brazil cooperated well with the United Nations. Allied air bases were set up in Brazil, Brazilian naval forces patrolled the South Atlantic, and a Brazilian expeditionary force

fought in Italy after the nation's declaration of war against the Axis in Aug., 1942.

National fear that Vargas would never fulfill his promise of free elections led to his overthrow on Oct. 29, 1945, and the transfer of his powers to Chief Justice José Linhares. In the subsequent elections, on Dec. 2, 1945, victory went to the Vargas candidate—Gen. Eurico Gaspar Dutra, inaugurated as president on Jan. 31, 1946.

In elections held Jan. 19, 1947, for State governors and a few Congressional posts, both Dutra's Social Democratic party and ex-dictator Vargas' Labor party lost ground to the Opposition National Democratic Union, but the Social Democrats retained control of both houses of Congress.

GOVERNMENT. Under the Constitution of Sept. 18, 1946, Brazil is a federation of twenty states, five territories and one federal district. The president is popularly elected for a five-year term and may not succeed himself. The national Congress is composed of two houses—the Senate, whose members serve for eight-year terms, and the Chamber of Deputies, elected for four-year terms. Members of Congress are elected by equal, direct, compulsory and secret suffrage under a system of proportional representation.

Among the important innovations of the new Constitution are articles empowering the federal government to create state-owned monopolies in the public interest and making the exploitation of mines and subsoil resources dependent on federal authorization. The Constitution also authorizes the government to intervene in labor disputes but recognizes the general principle of freedom of association and the right to strike. Labor courts are created for the solution of labor disputes. The social and economic clauses retain to a considerable extent the combination of state socialism and economic nationalism characteristic of the 1934 Vargas constitution.

The twenty states, with popularly elected legislatures and governors, and their own constitutions, have considerable autonomy, but during the Vargas regime they suffered from federal intervention.

DEFENSE. Military service is compulsory beginning at twenty-one, with an initial training period of one year and service on reserve until forty-five. The permanent army of 112,300 men and 258,000 reserves in 1940 was greatly expanded in World War II. Its strength in 1947 was unofficially estimated at 110,000 men in eight divisions. The army is well equipped with modern U. S. lend-lease military goods. The air force, under a separate Ministry of Aviation since 1941, expanded in World War II and took part in the Italian campaign.

The navy on Dec. 31, 1946, had two old battleships, two old light cruisers, twelve destroyers, and smaller craft with a total estimated tonnage of approximately 50,000.

During World War II about thirty warships were acquired, mostly from the United States.

EDUCATION. Education is free and compulsory; under the 1946 constitution it is to be given in Portuguese only. It was estimated in 1944 that 3,710,000 students were attending 40,000 schools, of which 39,000 were primary schools and the rest secondary, vocational and universities. All of the 7 universities are state institutions except the federalized University of Brazil at Rio de Janeiro. Illiteracy in 1940 was officially estimated at less than 50 percent.

AGRICULTURE. Agriculture is the basis of Brazil's economy, but only 4 percent of its area is under cultivation, the rest being grazing, forest, or non-productive land. Brazil leads the world in production of coffee and castor beans, and ranks second in cacao. The 1945-46 crop of coffee was 15,613,000 bags of 132 pounds each. The government controls its sale and has destroyed large stocks (77,330,547 bags from 1931 to 1943) to maintain the price. The 1944-45 cacao crop, grown largely in São Salvador, was estimated at 1,850,000 bags. Sugar cane production in 1944 was 1,377,000 short tons, sold locally or converted into alcohol. Almost 10 million acres are planted with corn, of which Brazil is the second largest producer in the Western Hemisphere. Other crops include tobacco, rice, cotton, beans, mandioca, fruits, bananas, coconuts and wheat.

Livestock is raised nearly everywhere, with the great centers in the central and southern states. There were 42,100,000 cattle in 1946, and 25,000,000 hogs in 1942.

MANUFACTURING. Manufacturing is still primarily for domestic consumption, but industrialization is progressing rapidly. The state of São Paulo is by far the leading industrial area. The value of industrial production in 1946 was estimated at \$1,125,000,000. Leading industrial products are foodstuffs, textiles, chemicals and pharmaceutical products, metallurgical products, clothing, leather, glass and porcelain, paper and rubber articles. The most important single industry is cotton weaving, with 440 establishments employing 25 percent of all industrial labor.

Brazil's first steel plant, at Volta Redonda, began regular production on June 23, 1946, at an annual rate of 300,000 tons.

Brazilian exports in 1946 totaled 18,242,734,000 cruzeiros (1945: 12,197,510,000 cruzeiros). Imports were valued at 13,028,716,000 cruzeiros (1945: 8,617,320,000 cruzeiros). Exports went principally to the United States (42.2%), Argentina (7.5%), Great Britain (8.8%), Italy (4.8%) and Belgium-Luxemburg (4.3%). The United States supplied most of Brazil's imports (58.2%), followed by Argentina (7.7%) and Great Britain (7.8%). Principal exports are

coffee, textiles, cotton, cacao, meats, vegetable oils and rubber. Leading imports include machinery, manufactures, foodstuffs (largely Argentine wheat) and petroleum products.

MINERAL RESOURCES. Brazil's vast mineral resources are among her least developed assets. The most important are coal (estimated reserves of 5,000 million tons; estimated 1944 production 1,950,000 short tons) and iron ore, found chiefly in Minas Gerais (1945 output, 330,000 short tons). Other important minerals, with estimated 1945 production, are manganese ore, 270,000 short tons; gold, 178,000 ounces; diamonds, 275,000 carats; bauxite, 7,800 short tons; tungsten, 2,500 short tons; quartz crystals; uranium; chrome ore; graphite and titanium.

FORESTS AND FISHERIES. More than half of Brazil's area is forested, but the extensive resources are relatively undeveloped. The largest single forest commodities are timber, chiefly pine from the southern states, and the wax of the carnauba palm, used for insulation and phonograph records and produced commercially only in Brazil. Rubber production, mostly in the Amazon basin, was estimated in 1945 at 55,000 short tons (exports in 1946 were 20,000 tons) but it has not developed as extensively as was once expected. Other forest products are Brazil nuts, yerba maté (Paraguay tea), medicinal plants, and vegetable oils. There are vast fishing banks and grounds in the rivers and along the coast, with some 2,500 known species of fish.

COMMUNICATIONS. Coastwise and river steamers are the main links between north and south Brazil, especially within the Amazon basin where inland waterways are the only means of land communication. Navigable waterways total 26,713 miles. Coastwise traffic is restricted to Brazilian ships, but the Amazon is open to all ships.

Railway mileage in 1947 was about 22,000, mostly located south of São Salvador. Railway development has been hampered by natural obstacles, especially by coastal mountains, but extensive government and private building is under way. Highways total 38,000 miles, and common roads about 124,000 miles. In 1944 seven air lines serving Brazil carried 44,000 passengers. The government air force operates mail schedules over domestic routes that are commercially unprofitable. In Sept., 1946, regular service between Brazil and Rome was inaugurated.

FINANCE. The 1947 budget estimated expenditures at \$652,346,230 and revenue at \$653,082,154. The national debt as of Jan. 1, 1946 was estimated at \$1,221,600,000. American direct investments in 1944 were \$240,000,000; British investments in 1946, an estimated £191,667,170. The income tax is the government's chief source of revenue. Dur-

ing World War II, Brazil ranked fifth in the world in receiving U.S. lend-lease goods; its share was worth \$319,494,000.

TOPOGRAPHY. Brazil covers about three-sevenths of South America, extends 2,965 miles north-south, 2,691 miles east-west, and borders every South American state except Chile and Ecuador. Its area would more than blanket the United States.

There are two principal physical divisions of the Brazilian surface. The lowlands are made up of the heavily forested tropical river basin of the Amazon, the world's largest drainage area; and the less heavily forested basin of the Plata to the south. The intermediate highland is a vast plateau, 1,000 to 3,000 feet above sea level, traversed by several low mountain ranges, and extending almost from the seacoast to the Bolivian frontier and south to the plains of Rio Grande do Sul. The plateau comprises more than half of the country and, with the narrow coastal plain, supports 90 percent of the population. In the northeast are undeveloped highlands.

More than a third of Brazil is drained by the Amazon and its more than 200 tributaries. The Amazon itself is navigable for ocean steamers to Iquitos, 2,300 miles upstream. Southern Brazil is drained by the Plata system—the Paraguay, Uruguay and Paraná Rivers. The most important stream entirely within Brazil is the São Francisco, navigable for a thousand miles but broken near its mouth by the 260-foot Paulo Afonso Falls, with estimated potential 1,000,000 horsepower.

CLIMATE. Brazil is almost wholly in the torrid zone, but such factors as altitude, prevailing winds, rainfall and distance from the sea combine to vary the climate from tropical to temperate. Manaós on the Amazon has an average temperature of 80.9° and annual rainfall of 71.65 inches. The corresponding figures for Rio de Janeiro are 72.5° and 44 inches. February is usually the warmest month in Rio de Janeiro. In much of the Amazon basin, rainfall averages 80 inches; in a few areas, more than 100 inches.

EUROPE

United Kingdom of Great Britain
and Northern Ireland

Area: 93,667 square miles.

Population (est. 1946): 47,175,000* (English, Scotch, Welsh, Irish).

Density per square mile: 501.9*.

Ruler: King George VI.

Prime Minister: Clement R. Attlee.

Principal cities (est. 1938): London (Greater), 8,655,000 (capital); Glasgow†, 1,131,800 (seaport, shipbuilding); Birmingham†, 1,001,600 (iron and steel); Liverpool, 827,400 (seaport); Manchester†, 624,300 (cotton textiles); Sheffield, 520,000 (steel, cutlery); Leeds, 494,000 (wholesale clothing); Edinburgh§, 463,100 (capital, Scotland).

Monetary unit: Pound sterling.

Language: English.

Religion: Protestant Episcopal (established Church).

*Excluding armed forces. †Estimated 1940.

‡Estimated 1945. §Estimated 1946.

HISTORY. Mighty little Britain, with an area smaller than that of Oregon, is one of the great manufacturing and trading nations of the world and controls an empire covering one-quarter of the globe. For centuries a bulwark of democracy and the world's leading sea power, Britain in 1947 moved into its third year under the Labor regime with an empire slowly disintegrating and its position as a world power definitely secondary to that of the U. S. and the Soviet Union. At home, a valiant people, harassed by floods, coal shortages and short rations, suffered privation in order to lift the volume of industrial production and foreign trade upon which their whole economy depends.

The history of Britain is obscure until the Roman invasions of the 1st century B.C. brought the islands into contact with the continent. When the Roman legions withdrew in the 4th century A.D., Britain

fell easy prey to the invading hordes of Angles, Saxons and Jutes from Scandinavia and the Low Countries. Seven large kingdoms were established, and the original Britons were forced into Wales and Scotland. It was not until the 11th century that the country finally became united under the Danish King Canute. Following the death of Edward the Confessor (1066), a dispute as to the succession arose, and William Duke of Normandy invaded England, defeating the Saxon noble, Harold II, at the Battle of Hastings (1066). The Norman conquest was accompanied by the introduction of Norman law and feudalism, changing the customs of England.

The reign of Henry II (1154-89), first of the Plantagenets, saw an increasing centralization of royal power at the expense of the nobles, but in 1215 John (1199-1216) was forced to sign the Magna Carta, which awarded the people, especially the nobles, certain basic rights. Edward I (1272-1307) continued the conquest of Ireland, reduced Wales to subjection, and made some gains in Scotland. In 1314, however, English forces led by Edward II were ousted from Scotland after the battle of Bannockburn. The late 13th and early 14th centuries saw the development of a separate House of Commons with tax-raising powers.

Edward III's claim to the throne of France led to the Hundred Years' War (1338-1453), which ended with the loss of almost all the large English territory in France. In England the great poverty and discontent caused by the war was intensified by the Black Death, a plague which reduced the population by about one-third. The Wars of the Roses (1455-85), a struggle for the throne between the House of York and the House of Lancaster, were ended by the victory of Henry Tudor (Henry VII) at Bosworth Field (1485). His son Henry VIII (1509-47) cut off England from the Roman Catholic Church when the Pope refused to allow him to divorce his first wife, Catherine of Aragon. Under Edward VI and Mary, the two extremes of religious fanaticism were reached and it remained for Henry's daughter, Elizabeth (1558-1603), to settle the Church of England on a moderate basis. In 1588 the Spanish Armada, a fleet sent out by Catholic King Philip II of Spain, was defeated by the English and destroyed during a storm. It was during Elizabeth's reign that England became a world power.

Elizabeth's heir was of the house of Stuart—James VI of Scotland—who joined the two crowns as James I (1603-25). The Stuart kings incurred large debts and were forced either to depend on Parliament for taxes or to raise money by illegal means. In 1642 war broke out between Charles I and a large portion of the Parliament; Charles was defeated and executed in 1649, and the monarchy was then abolished. The

Puritan Commonwealth endured for ten years, but after the death (1658) of Oliver Cromwell, the Lord Protector, the government fell to pieces and Charles II was restored to the throne in 1660. The struggle between the King and Parliament continued, but Charles II knew when to compromise. His brother James II (1685-88) possessed none of his ability and was ousted by the Revolution of 1688, which confirmed the predominant position of Parliament. James' daughter, Mary, and her husband, William of Orange, now ruled jointly.

The reign of Queen Anne (1702-14) was marked by the Duke of Marlborough's victories over France at Blenheim, Oudenarde and Malplaquet in the War of the Spanish Succession. England and Scotland meanwhile were joined together by the Act of Union (1707). Upon the death of Anne, the distant claims of the elector of Hanover were recognized, and he became King of England as George I.

The 18th century was a period of gradual growth and change. At home the unwillingness of the Hanoverian kings to rule resulted in the formation by the King's ministers of a cabinet, headed by a prime minister, which directed all public business. Abroad the constant wars with France resulted in expansion of the British Empire all over the globe, particularly in North America and India. This imperial growth was checked by the revolt of the American colonies (1775-83).

The age-long struggle with France broke out again in 1793, and during the lengthy Napoleonic Wars, which ended at Waterloo (1815), England was pitted at one time against almost all of Europe.

The Victorian era, named after Queen Victoria (1837-1901), saw the growth of a democratic system of government which had begun with the Reform Bill of 1832. The two important wars in Victoria's reign were the Crimean War against Russia (1853-56) and the Boer War (1899-1902). The latter was the result of England's imperialist expansion in South Africa and was accompanied by enormous extension of her sway throughout Africa.

The reign of Edward VII (1901-10) was marked by increasing uneasiness at home and abroad. Within four years after the accession of George V (1910), England entered World War I when Germany invaded Belgium. The nation was led by coalition cabinets headed first by Herbert Asquith and then (Dec., 1916) by the Welsh statesman, David Lloyd George. The years after the war were marked by labor unrest which culminated in the general strike of 1926. A Labor ministry formed early in 1924 by Ramsay MacDonald fell in October of that year. In 1929 a second Labor government was formed, but the world economic depression forced a change in 1931, and a na-

tional government was formed composed chiefly of Conservative members, although MacDonald remained prime minister until 1935. King Edward VIII succeeded to the throne in 1936 on his father's death but abdicated eleven months later (in order to marry an American, Wallis Warfield Simpson, whose second divorce was then pending) in favor of his brother, who became King George VI.

The efforts of Prime Minister Neville Chamberlain to meet by peaceful means the rising tide of Nazism in Germany failed with the German invasion of Poland (Sept. 1, 1939), which was followed by England's entry into World War II (Sept. 3, 1939). Serious Allied reverses in the spring of 1940 led to Chamberlain's resignation and the formation of another coalition war cabinet by Conservative leader Winston Churchill, who led England through most of World War II. Churchill resigned as the coalition leader shortly after V-E Day, but then formed a "caretaker" government which remained in office until after the parliamentary elections of July 5, 1945, in which the Labor party won an overwhelming victory. The government formed by Clement R. Attlee on July 26 embarked on a socialistic program at home and fought to maintain the Empire.

AREA AND POPULATION OF MAJOR SUBDIVISIONS* (1938)

Subdivision	Area	Population
England	50,870	39,050,780
Wales	7,469	2,063,420
Scotland	23,794	5,040,000†
Northern Ireland	5,238	1,295,000†

*Not including Channel Islands and Isle of Man.
†1940. ‡1939.

RULER. King George VI, born December 14, 1895, second son of King George V and Queen Mary, succeeded to the throne on the abdication of his brother, King Edward VIII, December 11, 1936; married April 26, 1923, to Lady Elizabeth Bowes-Lyon (born Aug. 4, 1900). Children: (1) Princess Elizabeth Alexandra Mary, born April 21, 1926 (heiress presumptive); (2) Princess Margaret Rose, born August 21, 1930. The King's living brothers are Prince Edward Albert, Duke of Windsor (formerly King Edward VIII), born June 23, 1894, and Prince Henry William, Duke of Gloucester, born March 31, 1900.

NATIONAL GOVERNMENT. The United Kingdom is a constitutional monarchy, with a king and a Parliament consisting of two houses: the House of Lords with about 670 hereditary peers, 26 spiritual peers, 16 Scottish representative peers, a number of Irish representative peers (vacancies are no longer filled), and a few life peers who have held high judicial office; and the House of Commons, numbering temporarily 640 members elected by practically universal suffrage. Supreme legislative power is vested in Parliament, which holds of-

fice for five years unless sooner dissolved. The executive power of the Crown is exercised by the Cabinet, headed by the prime minister. The latter, normally the head of the party commanding a majority in the House of Commons, is appointed by the sovereign, with whose consent he in turn appoints the rest of the Cabinet. All ministers must be members of one or the other house of Parliament; they are individually and collectively responsible to the Crown, the prime minister and Parliament. The Cabinet proposes bills and arranges the business of Parliament but it depends entirely on the votes of confidence in Commons. By an act passed in 1911, the lords cannot hold up "money" bills, but

they can delay other bills for a period of two years.

By the Act of Union (1707) the Scottish parliament was assimilated with that of England, and Scotland is now represented in Commons by 74 members. The Secretary of State for Scotland, a member of the Cabinet, is responsible for the administration of Scottish affairs.

Northern Ireland is governed by a separate parliament, as provided in the Government of Ireland Act (1920) and by a governor who represents the king; its political status is comparable to that of a state of the United States. It is represented in the British Parliament by 13 elected members.

		640

The members of the Cabinet are: Clement R. Attlee (Prime Minister, First Lord of the Treasury), Herbert Morrison (Lord President of the Council), Ernest Bevin (Secretary of State for Foreign Affairs), Sir Stafford Cripps (Chancellor of the Exchequer) and functions of (Minister for Economic Affairs), Albert V. Alexander (Minister of Defense), Viscount Jowitt (Lord Chancellor), Viscount Addison (Lord Privy Seal), James Chuter Ede (Secretary of State for the Home Department), Arthur Creech Jones (Secretary of State for the Colonies), Philip Noel-Baker (Secretary of State for Commonwealth Relations), Arthur Woodburn (Secretary of State for Scotland), George A. Isaacs (Minister of Labor and National Service), Aneurin Bevan (Minister of Health), Thomas Williams (Minister of Agriculture and Fisheries), George Tomlinson (Minister of Education) and Harold Wilson (President of the Board of Trade).

LOCAL GOVERNMENT. England and Wales are divided into 62 administrative counties, including the county of London, and 83 county boroughs. The counties are administered by the justices and by popularly elected county councils. All incorporated towns are administered by a municipal corporation consisting of the mayor, aldermen and burgesses. Local government in Scotland is comparable to that in England and Wales.

JUDICIARY. The ultimate court of appeal is the House of Lords; the final court of appeal for India and certain of the Dominions is the Judicial Committee of the Privy Council. Below the House of Lords on the civil side is the High Court of Judicature, divided into two parts, the Court of Appeal, and the High Court of Justice. On the criminal side is the Court of Criminal Appeal, which is the court of last resort barring the allowance of an appeal to the Lords. Actually these superior courts hear only a small fraction of the cases, and most of the trials are held in a complicated system of inferior courts, exercising original jurisdiction. The Lord Chancellor, Lord Chief Justice, Lords of

Appeal in Ordinary (law members of the House of Lords), and Lord Justices of Appeal are appointed by the Prime Minister.

DEFENSE. Compulsory military service, introduced in May, 1939, is still in effect, and will continue until 1954 under the terms of the National Defense Bill approved July 18, 1947. The armed forces are comprised of three separate services—the Army, the Royal Navy and the Royal Air Force. The Prime Minister retains supreme responsibility for defense, but the Minister of Defense has coordinating and executive duties. Service ministers are no longer Cabinet members but continue to be members of the Defense Committee headed by the Prime Minister with the Minister of Defense as deputy chairman; this committee is responsible to the Cabinet both for the review of current strategy and for coordinating departmental action in preparation for war.

Budget estimates for the fiscal year 1947-48 follow:

	Estimate	Strength*
Navy	£196,700,000	191,000
Army	388,000,000	1,210,000
Air	214,000,000	370,000

*Maximum during period.

Control of the land forces is exercised by the Army Council, headed by the Secretary of State for War. Its members include the Chief of the Imperial General Staff, the Adjutant General and Quartermaster General.

The Royal Navy is controlled by the Board of Admiralty, headed by the First Lord of the Admiralty, who is responsible to Parliament. Other members include the First Sea Lord and Chief of Naval Staff. The Royal Navy (Dec. 31, 1946) included 13 battleships, 1 battle cruiser, 12 fleet aircraft carriers, 2 escort carriers, 50 cruisers, 182 destroyers and 97 submarines. A large number of ships, however, were scheduled for reduced commission or reserve status. War losses totaled 2,831 vessels, including 3 battleships, 2 battle cruisers, 5 fleet carriers, 3 auxiliary carriers, 23 cruisers, 139 destroyers and 76 submarines.

Control of the Royal Air Force is vested in an Air Council analogous to the Army Council and headed by the Secretary of State for Air. The Fleet Air Arm was transferred to the Royal Navy in 1937.

The total strength of the armed forces on Aug. 31, 1939, was 681,000. Between that date and June 30, 1945, another 5,215,000 men were inducted. Of the total of 5,896,000, 923,000 served in the Royal Navy, 3,788,000 in the Army and 1,185,000 in the Royal Air Force. The Women's Auxiliary Forces added 619,000 to their 1939 strength of 21,000. In 1947, the total armed forces strength was about 1,210,000 in manpower and navy tonnage was 1,513,600.

BRITISH CASUALTIES OF WORLD WAR II

Source: White Paper, June 6, 1946.

	Navy	Army	R.A.F.	Total
Killed	50,758	144,079	69,606	264,443
Wounded	14,663	239,575	22,839	277,077
Prisoner	7,401	152,076	13,115	172,592
Missing	820	33,771	6,736	41,327
	73,642	569,501	112,296	755,439

EDUCATION. The following statistics are the latest available:

Elementary schools (1937-38): England and Wales, 29,988 departments under separate head teachers, 5,150,874 scholars on register; Scotland, 2,895 schools, 617,047 scholars; Northern Ireland, 1,700 schools, 191,862 scholars.

Secondary schools (1937-38): England and Wales, 1,398 grant-aided schools, 470,003 scholars; Scotland, 252 grant-aided schools, 156,645 scholars; Northern Ireland, 75 grant-aided schools, 14,557 scholars. Universities (1945): England, 37,443 students; Wales, 2,750 students; Scotland, 10,571 students; Northern Ireland, 2,663.

AGRICULTURE. Agriculture remains one of Britain's chief industries, employing well over 1,000,000 persons. In 1945, land under cultivation amounted to 19.2 million acres; permanent grassland, 11.8 million acres. In Scotland more than two-thirds of the land used for agriculture is uncultivated rough grazings, while over two-thirds of the cultivated area is arable land; in England and Wales three-fifths of the cultivated land is under permanent grass and only one-sixth of the total agricultural land is rough grazings.

LEADING AGRICULTURAL PRODUCTS, 1938 and 1946

(in thousands of tons)

Product	1938	1946*
Wheat	2,040	2,061
Oats	1,176	3,025
Rye	12	44
Barley	883	2,000
Potatoes	3,843	11,164
Wool	55	40.8†

*Provisional. †1945.

Livestock (1946) included 9,651,000 cattle, 20,412,000 sheep, 1,959,000 pigs, and 67,395,000 poultry. Cattle alone occupy a predominant position in British agriculture, accounting for about 40 percent of the total farm output. Production of cheese (1945) was 25,000 tons, butter 8,700 tons, beef and veal 617,000 tons and mutton and lamb 151,000 tons.

INDUSTRY. Great Britain is second only to the United States among the industrial nations of the world. The most important manufacture is heavy goods such as machinery, tools, bridges and locomotives; in-

dustry is concentrated in the north and Midlands of England. Sheffield is the center of the steel industry, while the china industry is concentrated in the Midlands. The cotton industry is centered in Lancashire; Liverpool, Manchester, Oldham, Preston and Bolton are the main manufacturing towns. The wool industry, England's oldest large trade, is located just east of the cotton towns, at Leeds, Bradford and Hull in Yorkshire. An important industrial region is the central Lowlands of Scotland, where woollens, silks, linens, cottons, lace, glass, paper, steel and pig iron are produced. Important shipyards are located along the coast. The 371 vessels of 1,133,245 tons launched in 1946 represented 53.3 percent of the world total.

Iron ore production in 1945 was more than 15,000,000 short tons, and steel 12,693,000 tons. In 1937 there were 442 open hearth furnaces.

Britain's last industrial census was taken in 1935, when the total value of manufactured products was \$13,907,300,000. The principal industries, in order of value of output in that year, were as follows: food, beverages and tobacco; engineering and transportation; textiles; metals; wood and paper products; chemicals; clothing. **TRADE.** The United Kingdom's economic prosperity is dependent on its foreign trade. Overseas trade for 1938 and for 1945 and 1946 is shown in the next table.

OVERSEAS TRADE

(Value in millions of pounds sterling)

	Imports	Exports	Re-exports
1938	919.5	470.8	61.5
1945	1,103.7	399.3	51.0
1946	1,297.7	911.7	50.3
1947*	820.0	515.5	56.0

*First six months.

The principal exports in 1946, with values in thousands of pounds sterling, were as follows: machinery (113,800), ships, locomotives and aircraft (113,514), iron and steel products (80,047), chemicals (66,056), cotton and cotton products (63,211), wool and wool products (43,595), non-ferrous metals (37,662), electrical products (37,392), apparel (30,453) and pottery and glass (27,625). Leading imports were meat (139,244), dairy produce (115,108), miscellaneous food (98,267), grain and flour (90,931), oils, fats and resins (82,804), tobacco (65,622), seeds and nuts for oils, fats and resins (62,135) and beverages (61,719).

COMMUNICATIONS. The merchant marine (July 1, 1939), excluding vessels under 100 tons, totaled 17,964,158 gross tons. Losses during World War II totaled 2,426 vessels of 11,331,933 gross tons. On June 30, 1947 merchant vessels of 2,062,949 tons were under construction in the United Kingdom. On June 30, 1946, the merchant marine comprised 3,159 ships with a gross

tonnage of 18,064,000, about 25 percent of the world total.

Under the Railways Act (1921) the railways of Great Britain were grouped into four systems—London, Midland and Scottish; London and North-Eastern; Great Western; and Southern. The total mileage of railways in 1938 (latest year for which data are available) was 20,797. In 1945, 294,694,000 short tons of freight were carried. Roads (Mar. 31, 1938): England and Wales (class I) 20,627 miles, (class II) 13,070 miles; Scotland (class I) 6,632 miles, (class II) 3,967 miles; Northern Ireland (class I) 1,273 miles, (class II) 1,933 miles.

In 1945-46, British airlines flew 25,738,834 miles on a net route mileage of 66,716 and carried 143,950 passengers. On Aug. 31, 1946, a total of 3,030,897 motor vehicles were licensed, including 1,746,800 private cars. There were 10,673,000 radio set licenses on Aug. 31, 1946, and in 1945, 3,888,626 telephones.

FINANCE. Actual revenue for the fiscal year 1946-47 amounted to £3,341,223,358 as opposed to budget estimates of £3,161,300,000. Actual expenditure was £3,910,345,955 as opposed to budget estimates of £3,886,917,000. Notes in circulation in December, 1946, averaged £1,404,760,000. The public debt (internal and external) on Dec. 31, 1946, was £24,785,000,000. Drawings on the U.S. loan of \$3,750,000,000 amounted to \$1,550,000,000 on April 25, 1947.

ESTIMATED REVENUE AND EXPENDITURE, 1947-48

Estimated Revenue, 1947-48

Income tax	£1,073,000,000	
Surtax	80,000,000	
Death duties	155,000,000	
Stamps	57,000,000	
Profits tax and excess profits tax	202,000,000	
Other inland revenue duties	1,000,000	
Total	1,568,000,000	
Customs	736,960,000	
Excise	643,040,000	
Total	1,380,000,000	
Motor vehicle duties		£50,000,000
Sale of surplus war stores		95,000,000
Surplus receipts from certain trading services	55,000,000	
Wireless licenses	11,000,000	
Crown lands	1,000,000	
Receipts from sundry loans	21,000,000	
Miscellaneous	270,000,000	
Total	503,000,000	
Total estimated revenue	3,451,000,000	

Estimated Expenditure, 1947-48	
Interest and management of national debt	£525,000,000
Payments to Northern Ireland exchequer	23,000,000
Miscellaneous consolidated fund services	8,000,000
Total	556,000,000
Supply services	
{ Army	372,972,000
{ Navy	182,935,000
Defense { Air	211,482,000
{ Supply	100,300,000

Total	28,341,000
Total estimated expenditure	3,181,367,000
Surplus	269,633,000
Grand total	3,451,000,000

TOPOGRAPHY AND HYDROGRAPHY. The United Kingdom, consisting of England, Wales, Scotland and Northern Ireland, is about one-third the size of Texas. England, in the southeast part of the British Isles, is separated from Scotland on the north by the granite Cheviot Hills; from them the Pennine chain of uplands extends south through the center of England, reaching its highest point in the Lake district in the northwest. To the west along the border of Wales—a land of steep hills and valleys—are the Cambrian Mountains while the Cotswolds, a range of hills in Gloucestershire, extend into the surrounding shires. The remainder of England is plain land, though not necessarily flat, with the rocky

sand-topped moors in the southwest, the rolling downs in the south and southeast and the reclaimed marshes of the low-lying Fens in the east central districts. Scotland is divided into three physical regions—the Highlands, the Central Lowlands, containing two-thirds of the population, and the Southern Uplands. The western Highland coast is intersected throughout by long narrow sea-lochs or fiords. Scotland also includes the Outer and Inner Hebrides and other islands off the west coast and the Orkney and Shetland Islands off the north coast.

Wales is generally hilly; the Snowdon range in the northern part culminates in Mt. Snowdon (3,560 ft.), highest in either England or Wales. Northern Ireland is somewhat similar in topography to the rest of the island, with two ranges (Donegal and Sperrin) and an extensive plateau (Antrim) in the northeastern part.

In addition to the numerous inlets and bays of the coast, England has a group of lakes in the northwest which includes Windermere, Coniston, Derwentwater, Ullswater and Grasmere. Important rivers flowing into the North Sea are the Thames, Humber, Tees and Tyne. On the west are the Severn and the Wye, which empty into the Bristol Channel and are navigable, as are the Mersey and Ribble. Scotland has many picturesque lakes (as in Northern Ireland). Its most important river is the Clyde.

CLIMATE. Although Great Britain lies in the same approximate latitude as Labrador, its climate is tempered by the westerly winds blowing off the warm Gulf Stream. The sea winds also prevent excessive summer heat. Rainfall is abundant, especially in the early fall. London's famed "pea-soup" fogs occur most frequently in November and March. It has been estimated that clouds, fogs or mists obscure the sun for approximately two-thirds of the time it is above Britain.

The mean annual temperature of England and Wales is about 50°; the west coast is somewhat warmer than the east. January is the coldest month (average about 40°) and July the hottest (about 61.5°). Highest July temperatures usually occur around London, where the mean is somewhat above 64°. Coldest months in the capital are December (about 38°) and January (about 39°). The mean annual rainfall in London is 23½ inches.

North of Birmingham, the summers are cool, and in Edinburgh the mean temperature in July is usually below 60° (59.1° in 1946). Rainfall is less than in London.

Northern Ireland has a climate comparable to that of the rest of Great Britain, although somewhat more equable. Highest mean summer temperature is about 59° in July, and the mean winter temperature rarely falls below 40°. Most of the comparatively light rainfall occurs in autumn.

MINERALS. Great Britain's most important mineral resource is coal, which was responsible to a large extent for British industrial supremacy during the late 18th and the 19th centuries. The coal mines were nationalized in 1946. Reserves have been variously estimated at from 150,000 million to 200,000 million tons. Prior to World War II, coal was exported in declining amounts to the continent, mainly to France, Sweden, Denmark and Italy. Since the war, however, exports have been negligible, and Britain has been hard put to meet her own minimum domestic requirements. The average number of persons employed in coal mining, exclusive of clerks, was 709,000 in 1945.

Most of the British iron ore is produced in England, especially in Cumberland, Lancashire and Staffordshire. Tin ore and copper are obtained almost exclusively from Cornwall, while lead comes mainly from Flint, Durham and Derbyshire. Zinc occurs mainly in North Wales, the north of England, the Isle of Man and the county of Dumfries in Scotland. The whole British supply of china clay (kaolin)—of great importance in the ceramic, papermaking, bleaching and chemical industries—comes from Cornwall. Petroleum production is negligible, but oil shale exists in large quantities.

MAJOR MINERALS, 1938 and 1945

(in thousands of short tons)

	1938	1945
Coal	253,518	192,560
Iron Ore	13,269	15,400
Aluminum	25.8	35.7
Superphosphates	476	1,016

The most important potential sources of water power are in the highlands of Scotland, North Wales and Cumberland. Electricity generated in England, Scotland and Wales averaged 3,106,000,000 Kwh monthly during 1945—third only to the output of the U.S. and Canada. For the first nine months of 1946, the average was 3,224,000,000. Gas manufacture averaged 39,100,000 therms weekly in Sept., 1946.

FORESTS, FISHERIES. Great Britain was once heavily forested, but centuries of timber cutting and clearing have denuded the country of the original forests. Woodland of all types approximates 3,000,000 acres, and barely 40 percent of Britain's surface is covered with timber. Consequently the nation is heavily dependent on imported timber.

Great Britain's sea fishing industry is among the most important in the world. The principal kinds of fish caught are herring, cod, haddock, plaice and hake, classed as wet fish, and, among shellfish, oysters, crabs and lobsters. The most important factor in the export trade is salted herring, which ordinarily represents about

70 percent of the total. The principal grounds frequented by British fishermen are the North Sea, off Iceland, the Faroes, south of Ireland, west of Scotland, west of Ireland, the Irish Sea and English Channel. The catch of wet fish in 1945 amounted to 550,000 tons.

GIBRALTAR—Status: Colony.

Governor: Lt. Gen. Sir Kenneth Anderson.

Gibraltar, at the south end of the Iberian Peninsula, is a rocky promontory commanding the western entrance to the Mediterranean. Aside from its strategic importance, it is also a free port, naval base and coaling station. It was captured by the Arabs crossing over from Africa into Spain A.D. 711. In the 15th century it passed to the Moorish ruler of Granada and later became Spanish. It was captured by an Anglo-Dutch force during the War of the Spanish Succession in 1704 and passed to Britain by the Treaty of Utrecht in 1713. Most of the inhabitants are of Spanish, Italian and Maltese descent. There are no important industries. In 1945, 3,962 vessels entered the port. Gibraltar's climate is equable, with summer temperatures averaging about 84° maximum. Mean annual temperature is 64.4°.

MALTA—Status: Colony.

Capital: Valletta (pop. 1931: 22,883).

Governor: F.C.R. Douglas.

Foreign trade (1944): exports, £308,807; imports, £5,270,318. **Chief exports:** potatoes, onions.

Agricultural products: potatoes, onions, cereals, fruits.

The Maltese islands lie between Europe and Africa, in the central channel linking the eastern and western Mediterranean. The inhabited islands are Malta (95 sq. mi.), Gozo (26 sq. mi) and Comino (1 sq. mi.). The Knights of St. John (Malta), who obtained the islands from Charles V in 1530, reached their highest fame when they withstood an attack by superior Turkish forces in 1565. Napoleon seized the island in 1798, but the French forces were ousted by British troops in 1799, and British rule was confirmed by the Treaty of Paris (1814). The principal importance of Malta is its strategic location as a naval base; it was heavily attacked by German and Italian aircraft during World War II but was never invaded by the Axis. Most of the population are Maltese, speaking the Phoenician Maltese language, a tongue akin to Syriac and Arabic. The islands are heavily populated (2,202 per sq. mi.) and are heavily dependent on imports of food-stuffs.

The climate is temperate and healthful. Annual mean temperature is 64.5°, with June-September the hottest months and December-February the coldest (56°). Rainfall is irregular.

AFRICA

ANGLO-EGYPTIAN SUDAN (See EGYPT).

BRITISH SOUTH AFRICAN PROTECTORATES.

High Commissioner: Sir Evelyn Baring.

The three British protectorates in southern Africa—Basutoland, Bechuanaland and Swaziland—are not part of the Union of South Africa. They are administered by a High Commissioner responsible to the Secretary of State for Dominion Affairs in the British cabinet. He also holds the office of High Commissioner for the United Kingdom in the Union of South Africa.

BASUTOLAND—Status: Protectorate.

Capital: Maseru (population 2,804).

Foreign trade: included in South African customs union. **Chief exports:** wool, mohair.

Agricultural products: corn, wheat, sorghum.

Basutoland is a mountainous enclave surrounded by the Union of South Africa and bounded by the Orange Free State, Cape Province and Natal. It was constituted a native state under British protection by a treaty signed with the native chief Moshesh in 1843. It was annexed to Cape Colony in 1871, but on Mar. 13, 1884, was restored to direct control by the Crown. The resident commissioner is advised by a council of 100, of whom 95 are nominated by the native chiefs who administer the affairs of their respective tribes.

The population is restricted almost entirely to the lowland strip in the west; the white population (1,434 in 1936) consists solely of officials, missionaries, traders and a few labor agents for employers in the Union of South Africa. About 100,000 natives are regularly employed in the Union. Sheep raising is highly developed; exports of wool in 1944 were 4,243 tons. Land is the common property of the nation, held in trust by the chiefs. There are no European farmers.

The climate is dry and variable; temperatures range from 11° to 93°. Rainfall also is variable, but is heaviest during the summer; it averages about 30 inches annually.

BECHUANALAND—Status: Protectorate.

Capital: Mafeking, in Cape Province (population 4,666).

Resident Commissioner: A. Sillery.

Foreign trade (1943): exports £5A695,807; imports £5A556,380. **Chief export:** pastoral products.

Agricultural products: hides and skins, cattle, butter, millet, maize.

Mineral (1943): Gold (12,965 ounces).

Bechuanaland lies in south central Africa, bounded on the south and southeast by the Union of South Africa, on the west by South-West Africa, on the north by Angola and Northern Rhodesia and on the

northeast by Southern Rhodesia. Its average elevation is 3,300 feet and the greater part is gently undulating. The area was placed under British protection on Sept. 30, 1885, to prevent further Boer encroachment and has since remained a British protectorate. The form of government is similar to that of Basutoland.

Most of the inhabitants are Bantu, but there were 1,899 Europeans in 1936, a few of them farmers. The country is essentially pastoral, with cattle raising and dairy farming the chief industries. Some gold is mined in the Tati district near Francistown. Silver and copper also are mined.

Timber for use as fuel and pit props is also produced.

The summers are intensely hot; winters (May-August) are pleasant. Rainfall occurs mostly between December and May, and dust storms are frequent.

SWAZILAND—Status: Protectorate.

Capital: Mbabane (population 1,600).

Resident Commissioner: E. B. Beetham.

Foreign trade: included in South African customs union. Chief exports: cattle, asbestos.

Agricultural products: cattle, hides and skins, butter, tobacco, corn, millet.

Minerals: asbestos (1941: 21,127 tons), tin (131 long tons), gold.

Swaziland lies at the southeastern corner of the Transvaal. It is largely hilly, with an average elevation of 4,000 feet in the west. It came under the protection of the Transvaal Republic in 1894 but was made a British protectorate in 1906 under the high commissioner for South Africa.

The natives are mostly Swazi; there were 2,740 Europeans in 1936, mostly farmers. Grazing is the principal native occupation; there is excellent pasture in the high land to the west. Tropical and subtropical crops are raised in the lower areas. Tin is mined near Mbabane. The country is dependent on road transport, by motor, oxen or mule.

Rainfall is moderate throughout the protectorate and is heaviest in summer. Average temperature ranges from about 65° in July to 80° or more in January.

GAMBIA—Status: Colony and protectorate.

Capital: Bathurst (population 14,370).

Governor: Andrew B. Wright.

Foreign trade (1945): exports £662,000; imports £930,000. Chief exports: groundnuts (1945: 45,600 tons).

Agricultural products: groundnuts, hides and skins, millet, rice, palm kernels.

Gambia, smallest of the British West African dependencies, is a stretch of land 200 miles long on both sides of the lower Gambia River, surrounded on all land sides by French West Africa and fronting on the Atlantic Ocean. During the 17th century

it was settled by various companies of English merchants; the slave trade was its chief financial support until abolition of slavery in 1807. Gambia became a crown colony in 1843. Except for the island of St. Mary, on which the capital stands, the area is administered as a protectorate.

The inhabitants, mostly Negroes or negroids, are predominantly Mohammedan. The principal economic activity is the cultivation of groundnuts. Internal transportation is by steamer and launch. Temperatures are fairly regular throughout the year, ranging from about 60° to 85°. Maximum rainfall is in August and September.

GOLD COAST—Status: Colonies (Gold Coast Colony, 23,937 square miles; Ashanti, 24,379 square miles); protectorate (Northern Territories, 30,486 square miles); U.N. trusteeship (Togoland, 13,041 square miles).

Capital: Accra (population 67,097).

Governor: Sir Gerald Creasy.

Foreign trade (1945): exports, £15,272,220; imports, £10,662,150. Chief exports: gold, cacao.

Agricultural products: cacao, copra, palm kernels.

Minerals: gold (1945: 475,000 ounces), manganese (1944: 565,000 tons), silver, diamonds.

Early a center of the slaving trade and of Anglo-Dutch rivalry, the Gold Coast, stretching along the Gulf of Guinea for 370 miles, became a British possession in 1871. Ashanti, in the interior, became a protectorate in 1896 and was annexed in 1901. The Northern Territories, to the north of Ashanti, were made a protectorate in 1901. The area is administered by a governor with an executive council and a legislative council with an elected majority. Ashanti and the Northern Territories are administered by Chief Commissioners responsible to the governor. Togoland, formerly German, was divided into French and British spheres and placed under League of Nations mandate after World War I and under U.N. trusteeship since Dec. 13, 1946.

Except for 3,200 non-Africans, the population is all Negro. The principal native industry is the cultivation of cacao, in the production of which the colony leads the world. The climate on the coast is hot and humid, ranging on the average from 78° to 80°. Rainfall is chiefly from March to July and from September to October.

KENYA—Status: Colony and protectorate.

Capital: Nairobi (population 65,000).

Governor: Sir P. E. Mitchell.

Foreign trade (1944): exports, £5,793,000; imports, £7,123,000. Chief exports: coffee, tea, gold.

Agricultural products: coffee, tea, pyrethrum, sugar cane, sisal, corn, cotton, hides and skins.

Minerals: gold, sodium carbonate, silver, salt.

Forest products: wattle bark and extract, timber.

Kenya extends along the Indian Ocean between Ethiopia and Tanganyika Territory and westward to Lake Victoria and Uganda. Formerly known as the East Africa Protectorate, it was held under a concession from the Sultan of Zanzibar by the Imperial British East Africa Company from 1888 to 1905. It became a crown colony in 1920, the coastal strip leased from the Sultan of Zanzibar becoming a protectorate. Kenya's area is 224,960 square miles.

The colony is predominantly agricultural, and a large area is cultivated by Europeans. Altitude ranges from sea level to more than 9,000 ft.; hence, the cultivation of tropical, subtropical and temperate crops is possible. The population was estimated at 3,940,000 in 1944. Non-natives (1943) included 30,765 Europeans, 17,640 Arabs and 55,795 Asiatics (mostly British Indians).

The coastal zone of Kenya is hot and humid; February to April are the hottest months, with a mean temperature of 82° at Mombasa. June and July are coolest (76° at Mombasa). The yearly average rainfall is about 48 inches. In the interior highlands the climate is temperate, and the rainfall comparatively heavy. Yearly average temperatures at Nairobi are 60° to 66°.

MAURITIUS—Status: Colony.

Capital: Port Louis (population 57,803).

Governor: Sir Donald Mackenzie-Kennedy.

Foreign trade (1945): exports, 30,549,466 rupees; imports, 58,132,214 rupees. Chief export: sugar.

Agricultural products: sugar, copra, tobacco.

Mauritius is a mountainous island of volcanic origin in the Indian Ocean, about 500 miles east of Madagascar. It was seized in 1810 from the French, who had settled it in 1715, and was formally ceded to Great Britain by the Treaty of Paris (1814).

With almost 600 persons per square mile, the island is one of the most densely populated regions in the world. The population (432,648 in 1944) has a large white element, chiefly French and British, but British Indians are predominant. There are many half-castes. The leading industry is sugar cultivation.

The climate is pleasant during the cool season, but extremely hot from December to April (90° to 96° at Port Louis). During this period there are also frequent torrents of rain and occasional severe cyclones.

NIGERIA—Status: Colony and protectorate.

Area: 372,674 square miles (including British Cameroons, a U.N. trusteeship).

Population (est. 1943): 21,329,328 (all native, except about .01% European).

Governor: Sir John S. Macpherson.

Principal cities (est. 1939): Ibadan, 318,320 (native metropolis); Lagos, 167,000 (capital); Kano, 80,634 (textiles, leather goods, cattle).

Monetary unit: British pound.

Languages: Native tongues, Arabic, English.

Religions: Mohammedan, Pagan, Christian.

Nigeria, with an area twice that of California, is situated on the Gulf of Guinea in West Africa. It was visited by European traders and explorers in the 16th and 17th centuries, and by the end of the 18th century British operators had a virtual monopoly in the area. Between 1879 and 1914, a series of private colonial developments by the British, together with reorganizations of the Crown's interest in the region, resulted in the formation of Nigeria as it exists today. During World War I, native troops of the West African frontier force joined with French forces to defeat the German garrison in the Cameroons. The Cameroons, a narrow strip along Nigeria's eastern border, became a League mandate after World War I, divided between France and Britain. Today the British Cameroons is attached to Nigeria for administrative purposes.

The governor of Nigeria, named by the British Crown, heads the administration of the colony, which (including the Cameroons) is divided into four sections, each composed of several provinces. The custom of rule by native regimes, advised by British residents, is effected locally wherever practicable.

The vast majority of the population is Negro, although in the north there has been an admixture caused by invasions of Fula, Berber and Arab or Arabized people. Mohammedanism is the dominant religion, but Christian missionary societies are active.

Most of the people are agriculturists. The staple food crops are durra (guinea corn), millet, yams, bananas and maize. Among the leading export crops in 1945 were groundnuts, 337,000 tons; rubber, 11,037 tons (12,000 tons in 1946); cotton, 15,900 bales; cacao; and palm kernels and oil. Hides and skins are also a big export item. Aside from small native industry, there is no manufacturing.

Most external trade is with Britain. Exports in 1944 totaled £17,929,384. There is a substantial internal trade; Kano is a busy terminal for caravan routes. Imports in 1944 were £18,504,070. The Niger and several other rivers are navigable; otherwise, the 1,901 miles of railway are the chief means of transportation. Highway mileage totals about 21,000. The main ports, except Lagos, are on rivers.

Nigeria is a leading tin producer—12,900 tons in 1945—from mines on the Bauchi plateau. Other minerals are coal, gold, lead, silver and tungsten. Over half the area is forested, but forest resources are comparatively unexploited. Mahogany is the main timber export, followed by cedar and walnut. Gum arabic is also exported.

Extending from twenty to sixty miles inland from the coast is the swampy Niger delta region, gradually giving way to hilly

forest land. The larger part of the colony belongs to the great African plateau which, in Nigeria, reaches a maximum height of 3,000 feet. All of the colony lies within the tropics, but the climate varies from tropical in the south to near temperate on some parts of the plateau. In the south the temperature varies between 70° and 100°, and averages upwards of 80°.

NORTHERN RHODESIA—Status: Colony.

Capital: Lusaka (population 2,396).

Governor: Sir Gilbert Rennie.

Foreign trade (1944): exports, £12,147,232; imports, £6,699,588. Chief export: copper (about 75 percent).

Agricultural products: tobacco, maize, wheat.

Minerals: copper (1945: 215,500 tons), cobalt, vanadium, lead, zinc.

Northern Rhodesia is in south central Africa, bounded on the north by the Belgian Congo and Tanganyika Territory, on the east and southeast by Nyasaland and Mozambique, on the southeast and south by Southern Rhodesia and Bechuanaland, and on the west by Angola. Much of the country consists of high plateau, with the Congo-Zambezi watershed rising in places to 5,000 feet. Rhodesia was assigned in 1889 to the British South Africa Company, headed by Cecil Rhodes. Administrative control was transferred to the Crown on Apr. 1, 1924.

Native tribes number from 50 to 60; there were 18,745 Europeans in 1944. More than 3,000,000 acres are owned and occupied by Europeans. Metals constitute almost all exports by value. Lead and zinc deposits occur at Broken Hill; copper at Bwana M'Kuba. Railroad mileage in 1942 totaled 629; arterial roads, 3,158. A number of rivers are navigable.

Average temperature in the south ranges from about 65° in July to 80° or more in October. The rainfall occurs principally between November and April.

NYASALAND—Status: Protectorate.

Capital: Zomba (population 4,755).

Governor: Geoffrey F. T. Colby.

Foreign trade (1946): exports (incl. re-exports), £2,365,781; imports, £2,252,976. Chief export: tobacco (about 45 percent).

Agricultural products: tobacco, tea, cotton.

Nyasaland, a British protectorate since 1891, is a narrow area lying between Mozambique, Northern Rhodesia and Tanganyika Territory along the southern and western shores of Lake Nyasa. Agriculture is the chief occupation, both of the European settlers and natives.

The climate is extremely humid along the shores of Lake Nyasa, although the temperature rarely rises above 95°. In the highlands, above 3,000 feet, average temperatures are considerably lower. The dry season, from May to September, is comparatively cool.

ST. HELENA—Status: Colony.

Capital: Jamestown (population est. 1940: 2,300).

Governor: George A. Joy.

Foreign trade (1944): exports, \$126,435; imports, \$397,833. Chief exports: flax fiber and tow.

Agricultural products: flax, potatoes.

St. Helena is a volcanic island (47 sq. mi.) in the South Atlantic about 1,200 miles from the west coast of Africa. It is famous as the place of exile of Napoleon (1815–21). It was taken for Britain in 1651 by the British East India Company and became a crown colony in 1833. Attached to it are Ascension Island (34 sq. mi.), 800 miles northwest, and the Tristan da Cunha group (45 sq. mi.). Most of the inhabitants are of mixed European, East Indian and African descent. Ascension was an Allied air base in World War II.

Although St. Helena is in the tropical zone, its climate is temperate and healthful; the temperature varies from 68° to 84° in summer and 57° to 90° in winter.

SEYCHELLES—Status: Colony.

Capital: Victoria (population 5,000).

Governor: Dr. P. S. Selwyn-Clarke.

Foreign trade (1945): exports, 2,323,199 rupees; imports, 2,658,145 rupees. Chief export: copra.

Agricultural products: cinnamon, patchouli oil, coconuts, maize, sugar cane.

This archipelago of about 92 islands in the Indian Ocean was seized from France by British troops in 1794 and was ceded to Great Britain by the Treaty of Paris in 1814. The principal island is Mahé (55 sq. mi.), about 600 miles northeast of Madagascar. The climate of the archipelago is temperate and healthful.

SIERRA LEONE—Status: Colony and protectorate.

Capital: Freetown (pop. 1944: 86,000).

Governor: Beresford Stooke.

Foreign trade (1945): exports, £1,786,912; imports, £3,718,162. Chief exports: diamonds, iron ore.

Agricultural products: palm kernels and oil, rice, millet, cassava, rubber.

Minerals: diamonds (est. 1945: 800,000 carats), iron ore, gold.

Forest products: palm kernels, piassava.

Sierra Leone lies on Africa's west coast between French Guinea and Liberia. It is a well-watered hilly country but has a low swampy coastland with an extremely unhealthy climate. The coastal area (colony proper) was ceded to English settlers in 1788 as a home for Negroes discharged from the British armed forces and also for runaway slaves who had found asylum in London. The British protectorate over the hinterland was proclaimed in 1896. It was not until 1928 that slavery was totally abolished in the protectorate. Freetown is the best harbor on the west coast.

SOMALILAND—Status: Protectorate.

Administrative Center: Hargeisa (population 17,500).

Military Governor: G. T. Fisher.

Chief export: hides and skins.

Agricultural products: cattle, hides and skins, grains.

Forest products: gums and resins.

British Somaliland extends along the Gulf of Aden for about 400 miles and inland from 80 to 220 miles. The interior is an elevated plateau falling in steep escarpments to the coastal plain. It came under Egyptian influence in 1875, but during the years 1884-86 treaties guaranteeing British protection were signed with the various Somali chiefs. Italian troops occupied the protectorate in 1940, but it was retaken by British troops in 1941. Both executive and legislative power is exercised by the military governor.

Most of the inhabitants are nomadic Somalis of Mohammedan faith. Their principal activity is stock raising. The climate is extremely hot and arid, with rainfall in the coastal areas averaging less than 8 inches. The average temperature at Berbera, on the coast, is 77° in January and about 98° in July.

SOUTHERN RHODESIA—Status: Self-governing colony.

Capital: Salisbury (pop. 1945: 61,760).

Governor: Sir John N. Kennedy.

Prime Minister: Sir Godfrey M. Huggins.

Foreign trade (1946): exports, £21,715,567; imports, £20,743,707. **Chief exports:** tobacco (about 35 percent), gold, asbestos.

Agricultural products: tobacco (exports 1945: 20,083 tons), corn, groundnuts.

Minerals: gold (1945: 568,241 ounces), asbestos (1945: 56,348 tons), coal, chrome ore, silver.

Southern Rhodesia is located between Northern Rhodesia, Bechuanaland, the Union of South Africa and Mozambique in south central Africa; it is part of the great South African plateau. Its northern boundary is the Zambezi River. About two-thirds of the area is covered by trees and shrubs.

The country was settled in 1890 by the British South Africa Company, led by Cecil Rhodes. With the expiration of the company's charter, the white residents voted (1922) in favor of a responsible government of their own, and on Sept. 12, 1923, the country was annexed to Britain.

Most of the inhabitants are natives, but the country is well-adapted to European settlers, who in 1946 numbered 82,382. In addition there were 7,501 Asiatics and half-castes. Farming ranges from ranching to tobacco growing, but mixed farming is becoming more common. Conditions for cattle raising and dairy farming are especially favorable. Manufacturing is of growing importance, with the factories producing goods valued at £11,761,000 in 1942.

The colony is well served with railways (1,361 mi.), roads (1,637 mi.) and airlines.

The hottest month is October (mean maximum 85.2°); the coolest are June, July and August, when frost is likely to occur. Generally the days are hot throughout the year, and the nights are frequently cool. Rainfall is greatest in October, November and December.

SOUTH-WEST AFRICA (See UNION OF SOUTH AFRICA)**SWAZILAND (See BRITISH SOUTH AFRICAN PROTECTORATES)****TANGANYIKA TERRITORY—Status: Under United Nations trusteeship.**

Capital: Dar es Salaam (population 74,036).

Foreign trade (1946): exports, £9,001,585; imports, £8,122,875. **Chief export:** sisal.

Agricultural products: sisal, coffee, cotton, groundnuts, tobacco.

Minerals: gold (1944: £460,890), diamonds (1945: 116,000 carats), tin, mica.

Forest products: gum arabic and copal, beeswax, timber.

Tanganyika Territory, with the present Belgian mandate of Ruanda and Urundi, constituted German East Africa from 1884 until 1919. It was administered under League of Nations mandate by Britain until 1946, when it was placed under United Nations trusteeship, with Britain as the administering power.

Tanganyika's narrow coastal plain is bordered on the west by the precipitous eastern side of the Central African plateau. The territory also includes adjacent islands in the Indian Ocean.

The territory is sparsely populated; about two-thirds of the total area is uninhabited. It is the world's largest producer of sisal hemp. Most of the hemp, which is of the highest grade, is grown in the drier parts of the coast belt under European supervision. Stock raising is also important, but its progress is hampered by tsetse-fly areas. What may prove to be the largest diamond vein in the world was discovered at Shin-yanga in 1946.

The climate generally is hot and humid on the coastal areas, with the temperature averaging 80° at Dar es Salaam. Rainfall in the latter averages 60 inches. Inland the rainfall and temperature are lower.

UGANDA—Status: Protectorate.

Capital: Entebbe (population 7,321).

Governor: Sir John Hall.

Foreign trade (1945): exports, £9,939,000; imports, £3,281,000. **Chief exports:** cotton, coffee.

Agricultural products: cotton, coffee, sugar cane, rubber, tea, sisal.

Minerals: gold, tin.

Uganda lies immediately south of Anglo-Egyptian Sudan and west of Kenya, along the northwest shore of Lake Victoria. The

surface is extremely diversified, with lofty plateaus, snow-capped peaks, swamps, forests and arid areas. A British protectorate over the area was proclaimed in 1894. A large measure of home rule is given the native states, notably Buganda, whose *kabaka* (king) is assisted by a ministry and native parliament.

Agriculture, including livestock, is the basis of the economy. Cotton is raised, principally by natives, and coffee, tea and rubber are grown on large plantations. Most natives possess large herds of cattle and sheep. In 1944 there were 2,553 Europeans in the protectorate.

Like the topography, the climate is extremely variable. At Entebbe, the mean temperature is about 70°, with rainfall heaviest from March through May, and in November and December.

Union of South Africa

Area: 472,494 square miles.

Population (census 1946): 11,258,858 (European, 20.7%; Bantu, 68.7%; colored [i.e. mixed], 8%; Asiatic, 2.6%).

Density per square mile: 23.8.

Governor General: Gideon Brand Van Zyl.

Prime Minister: Field Marshal Jan C. Smuts.

Principal cities (census 1946): Johannesburg, 727,743 (gold, industrial center); Capetown, 454,052 (seat of legislature, seaport); Durban, 357,304 (seaport); Pretoria, 236,367 (seat of administration); Port Elizabeth, 146,231 (seaport).

Monetary unit: South African pound (ESA).

Languages: English, Afrikaans.

Religions (European population): Dutch Reformed Churches, 55%; Anglican Church, 19%; Methodist, 6%; Presbyterian, 5%; Roman Catholic, 5%; others 10%.

HISTORY. After the discovery of the Cape of Good Hope in 1488 by Bartholomeu Diaz, the Dutch sent the first colonists to the area in 1652. The British seized the territory in 1814 near the close of the Napoleonic wars, when Holland was France's ally. In protest against their autocratic rule, thousands of Boers, settlers of Dutch descent, trekked northward between 1835 and 1838 and set up the republics of Orange Free State and Transvaal, subsequently recognized by the British.

The discovery of gold in Transvaal in 1886 brought an influx of English and other foreigners. British demands that these immigrants be enfranchised by the Transvaal government precipitated the South African War of 1899-1902, won by the British. By the Treaty of Vereeniging (May 31, 1902) the Boers renounced the independence of Transvaal and Orange Free State. In 1910, Cape Colony, Transvaal, Natal and the Orange Free State were set up as the Union of South Africa, with dominion status and with Louis Botha, a former Boer general, as the first prime min-

ister. During World War I, South African forces seized German South-West Africa, over which the Union later received a mandate by the Treaty of Versailles.

When World War II broke out, there was considerable pro-German and anti-British feeling in South Africa. The country went to war against the Axis, however, under the leadership of Smuts, and South African forces fought in many theaters.

The British Royal Family toured South Africa during early 1947 in an effort to strengthen the ties of Empire with the Union, whose anti-British minority had become more vociferous with the war's end.

GOVERNMENT. The Union of South Africa, as a self-governing dominion, has its own legislature, a Senate of forty-four members elected for ten years, and a House of Assembly of 153 members elected for five years. All legislators must be Union nationals of European descent, and suffrage is virtually limited to whites. The governor general, appointed by the British Crown after consultation with the Union, can summon or dissolve the Senate and House, but a general election must be held at least once every five years. Gen. Smuts' United Party was victorious in the 1943 elections, holding 89 seats in the Assembly.

The elected councils in each of the four provinces have only such powers as are delegated to them. Each is headed by an administrator appointed by the central government.

Political considerations made the draft inexpedient in World War II, and all members of the armed forces were volunteers. The postwar strength of the defense forces is fixed as follows: army, 4,640; air force, 3,319; navy, 863; a total strength of 8,822 as opposed to 5,549 in the prewar establishment. The navy, only slightly expanded in World War II, has sixty small vessels.

EDUCATION. Education for white children is compulsory from the ages of seven to sixteen. Primary education is free and, except for vocational schools and the five universities, all education is under provincial control.

In 1943 there were 3,383 state and state-aided primary and secondary schools for European scholars, who numbered 399,024, and 5,551 non-European schools with enrollment of 731,548. The average number of university students was 13,059.

The official languages are English and Afrikaans. The latter, derived from 17th-century Dutch, is taught in almost all the schools. About 65 percent of the population over 7 years old understands both languages. People speaking Afrikaans as a "home" language predominate in all the provinces except Natal, where most of the Asiatic population, chiefly laborers from South India, is concentrated. European and Asiatic immigration is strictly controlled.

AGRICULTURE. South Africa is predominantly a pastoral country, with less than 15 percent of its area considered arable. Sheep and cattle raising are the principal occupations, especially in the high veldt. In 1943 there were 37,888,043 sheep and 13,068,414 cattle. Wool production in 1945-46 was estimated at 650,000 bales, and mohair in 1944-45 at 14,744,000 pounds.

Climate and differences in terrain combine to give a great variety of agricultural products. The staple crop is maize, grown widely with a production varying from 1½ to 3 million tons annually. In southwest Cape Province, products of the Mediterranean type predominate, while in the coastal belt of Natal and in northern Transvaal, subtropical crops, especially sugar, are grown.

Production of leading crops in 1944-45 was as follows: maize, 17,870,000 bags of 200 lb. each; wheat, 3,373,430 bags of 200 lb. each; potatoes, 2,500,000 bags of 150 lb.; oats (purchased), 96,236 bags of 150 lb.; barley (purchased), 448,913 bags of 150 lb.; deciduous fruit, 67,634 short tons; cane sugar (1945-46), 553,174 bags of 200 lb.

MANUFACTURING AND TRADE. According to the industrial census of 1943-44, there was a total of 10,684 factories with 398,493 workers, and the gross value of industrial output was £330,557,000. Food, beverages and tobacco, and metal products led the list. As a result of the need for armaments in World War II, the Union's manufacturing is no longer mainly devoted to agricultural processing. A wartime iron and steel industry was established, and cement, chemical, textile and auto assembly plants were expanded. Steel production 1945-46 was 525,042 tons. The major industrial area is southern Transvaal.

Exports in 1944, excluding government stores, specie, gold bullion, wool, bunker coal and ships' stores, amounted to 68,552,-894 South African pounds. Re-exports totaled £4,335,089. Imports amounted to £84,825,271. The principal export items ordinarily are sugar, maize, hides and skins, bunker coal, diamonds and fruit. Leading imports are foodstuffs, textiles, machinery, lubricants and automobiles.

COMMUNICATIONS. The well-organized railway system, mostly Union-controlled, totaled 13,479 miles in 1945. Overseas shipping in 1940 totaled 12,909,734 net tons and coastwise shipping, 12,316,308 net tons. Roads suitable for motor traffic in 1945 amounted to 90,000 miles. Regular air service is available to Europe via Cairo and to the U.S. via West Africa and Brazil.

FINANCE. Expenditures in 1947-48 were estimated at £119,990,000 and revenue at about £119,880,000 after proposed tax reductions. The public debt on Mar. 31, 1946, totaled £582,924,000. The only bank of issue is the South African Reserve Bank. Notes in

circulation on Mar. 31, 1946, totaled £66,-000,000; gold reserve £123,000,000.

TOPOGRAPHY AND CLIMATE. The Union has a high interior plateau, or veldt, nearly half of which averages 4,000 feet in elevation. There are no important mountain ranges, although the Great Escarpment, separating the veldt from the coastal plain, rises to over 10,000 feet. The principal river is the Orange, rising in Basutoland and flowing westward for 1,300 miles through the Union's center to the Atlantic.

Except for the western semi-arid regions, the climate is generally subtropical, much like that of northern Florida. Rainfall averages about 40 inches a year on the east coast and decreases sharply westward. The mean annual temperature is remarkably uniform; at Johannesburg it is 60.6°, with January the hottest month. Most of the rainfall is in October through March.

MINERALS, FORESTS AND FISHERIES. Extensive mineral resources account for the economic prosperity. The dominion is the world's leading gold producer; total output of gold up to 1940 was £1,874,593,-973. Diamond production is now surpassed in importance by coal. Mineral production for 1945 included gold, 12,213,545 oz. (1946: 11,917,914 oz.); coal, 25,330,000 tons (1946: 26,053,716 tons); diamonds, 1,122,945 metric carats; iron ore, 954,814 tons; manganese ore, 126,266 tons; asbestos, 28,216 tons; and silver (1944), 1,210,000 oz. Chrome, gypsum, lead, tin, tungsten, platinum and copper also are mined.

Forests cover only a small portion of the Union, and are mostly in the east. The whaling industry, centered at Durban on the east coast, produces considerable amounts of whale oil. The Union has extensive fishery resources along the 1,500 miles of coast line. The annual trawler catch of edible fish is 95,000,000 pounds.

SOUTH-WEST AFRICA—Status: Mandate.

Area: 317,725 square miles.

Population (est. 1941): 321,300.

Capital: Windhoek (population 10,651).

Foreign trade (1945): exports £5A8,079,010; imports £5A4,855,992. Chief exports: karakul skins (4.5%), butter, slaughter animals, diamonds.

Agricultural products: hides and skins, butter, corn, wheat.

Minerals (1945): diamonds, 156,000 carats; vanadium, 463 tons; tungsten, lead, tin, iron ore and copper.

The mandate, bounded on the north by Angola, and on the east by Bechuanaland and the Union of South Africa, was discovered by the Portuguese explorer Diaz in the late 15th century. It is for the most part a portion of the high plateau of South Africa with a general elevation of from 3,000 to 4,000 feet. It became a German colony in 1884 but was conquered by South African forces in 1915, becoming a Union mandate by the terms of the Treaty

of Versailles. The Union of South Africa's application for incorporation of the territory into the Union was rejected by the United Nations assembly on Dec. 14, 1946, and the Union was invited to prepare a trusteeship agreement instead. The administrator is appointed by the Union.

The country in general is better suited to grazing than to the raising of crops because of the light rainfall. The karakul sheep industry is particularly well-developed; in 1945, 2,518,788 pelts were exported. The Union accounts for almost all the imports and about 40 percent of the exports. Most of the natives live on large reserves. The principal port is Walvis Bay.

ZANZIBAR—Status: Protectorate.

Capital: Zanzibar (population 45,276).

Sultan: Seyyid Sir Khalifa bin Harub.

British Resident: Sir Vincent Glenday.

Foreign trade (1946): exports (domestic), £1,710,731; imports, £1,769,197. **Chief export:** cloves.

Agricultural products: cloves, copra, sisal.

The protectorate consists principally of the islands of Zanzibar (640 sq. mi.) and Pemba (380 sq. mi.), just off the East African coast. Before 1890, the sultanate's territory also included a large area on the mainland, now comprising Italian Somaliland, Kenya and Tanganyika Territory. It was proclaimed a British protectorate Nov. 4, 1890. The British resident administers the government, but the sultan still retains considerable authority.

The principal industry is the production of cloves—80 percent of the world supply.

The climate is excessively hot and moist, with a mean annual temperature of 80.5°. June to September is the coolest season.

WESTERN HEMISPHERE

BAHAMAS—Status: Colony.

Capital: Nassau (population est. 1945: 20,000).

Governor: Sir William L. Murphy.

Foreign trade (1945): exports, £432,202; imports, £1,806,019. **Chief exports:** sisal, vegetables, sponges.

Agricultural products: tomatoes, citrus fruit, sisal.

Sea products: sponges, lobsters.

The Bahamas are an archipelago of about 3,000 islands, islets (cays) and rocks, east of Florida and north of Cuba, extending from N.W. to S.E. for about 800 miles. Only about 20 of the islands are inhabited; the most important is New Providence (20 sq. mi.) on which Nassau is located. The islands were reached by Columbus in Oct., 1492, and were a favorite pirate resort in the early 18th century. They have been a Crown colony since 1717. The constitution provides for a nominated Legislative Council and a popularly elected Assembly. The governor is advised by an Executive Council.

About 87 percent of the population is Negro. The tourist trade is of considerable importance, especially at Nassau, which is a favorite winter resort. The climate is exceptionally agreeable, with mean temperatures ranging from 60° (January to March) to 88° (June to September). The rainy season is May through October; hurricanes occur usually from July to October.

Agriculture, except for tomato and sisal culture, is of little importance. Straw and shellwork are the principal industries of the natives. A Royal Air Force unit is stationed in the archipelago.

BARBADOS—Status: Colony.

Capital: Bridgetown (population 14,000).

Governor: Sir Hilary Blood.

Foreign trade (1945): exports, £2,870,231; imports, £3,470,727. **Chief exports:** sugar, molasses, rum.

Agricultural products: sugar (1946: 133,720 long tons), cotton.

Barbados, an island east of the Windward group in the West Indies, has been a British possession since 1627; it is believed to have been discovered by the Portuguese. The colony has a nominated Legislative Council and a popularly elected Assembly of 24 members, but the Crown, represented by the governor, retains veto power.

The island is very densely populated (about 1,160 per sq. mi.). About 70 percent of the inhabitants are Negro, 7 percent white and the remainder of mixed blood. Approximately 70 percent of the total area is cultivated and half of this is devoted to sugar, which is the staple product; there are 100 sugar and molasses plants and 3 rum distilleries.

Barbados has an agreeable climate, with temperatures that range between 70° and 86° and rarely fall below 65°. The cold season (December through May) is also the dry season; average annual rainfall is about 60 inches, with September the wettest month.

BERMUDAS—Status: Colony.

Capital: Hamilton (pop. 1945: 3,500).

Governor: Admiral Sir Ralph Leatham.

Foreign trade (1945): exports, £142,920; imports, £2,444,470. **Chief export:** lily bulbs.

Agricultural products: lily bulbs, potatoes, vegetables, arrowroot.

The Bermudas comprise an archipelago of about 360 small islands, 580 miles east of North Carolina. The largest is (Great) Bermuda or Main Island. Discovered by Juan Bermudez, a shipwrecked Spaniard, early in the 16th century, the islands were settled in 1612 by an offshoot of the Virginia Company and became a Crown colony in 1684. The governor is assisted by nominated Executive and Legislative Councils and a popularly elected Assembly of 36 members. In 1940, sites on the islands

were leased for 99 years to the U. S. for air and navy bases. Bermuda is also the headquarters of the West Indies and Atlantic squadron of the Royal Navy. The most important factor in the colony's economy is the tourist trade, attracted by the mild, healthful climate. The mean annual temperature is 71°, with extremes of 49° and 94°. Rainfall averages about 58 inches annually.

BRITISH GUIANA—Status: Colony.

Capital: Georgetown (pop. 1946: 73,537).

Governor: Sir Charles Woolley.

Foreign trade (1945): exports, \$21,257,246; imports, \$20,888,034. Chief exports: sugar, bauxite, gold, rice.

Agricultural products: sugar (1945: 158,445 long tons), rice, copra, coffee.

Minerals: bauxite (1945: 667,764 long tons), gold (1945: 22,533 ounces), diamonds.

Forest products: balata, timber.

The only British possession in South America, British Guiana is located on the northeastern coast between Venezuela and Surinam (Dutch Guiana). Settled by the Dutch in the 17th century, it was occupied by the British in 1796 and ceded to them at the end of the Napoleonic wars. Behind the low plain which contains the agricultural area is a somewhat higher area containing forest and mineral resources. The governor is assisted by an Executive Council; the Legislative Council has an elected majority.

The heterogeneous population contains about 159,000 East Indians, 135,000 Negroes, 8,000 Portuguese, and 9,000 aborigines. The cultivated area covers only 155,000 acres, mostly devoted to rice and sugar cane. About 86 percent of the colony is forested, but the vast forest resources are relatively unexploited. Timber resources in 1946 were estimated at 41,000,000,000 cu. ft. of merchantable timber. Railway mileage is 110, and highway mileage about 700; communication to the interior is mainly by steamer and launch. The colony's production of bauxite was of strategic importance during World War II.

The coastland climate is relatively hot and humid, with average temperatures of 78° in January and 81° in October, and only a slight variation between day and night. Inland temperatures are roughly 3° higher. Rainfall is heavy along the coast.

BRITISH HONDURAS—Status: Colony.

Capital: Belize (pop. 1946: 18,188).

Governor: Edward G. Hawkesworth.

Foreign trade (1945): exports, \$5,519,511; imports, \$7,836,776. Chief exports: cedar and mahogany.

Agricultural products: bananas, sugar cane, citrus fruits, chicle.

Forest products (1946): cedar logs (12,051 cu. ft.) and lumber (15,414 cu. ft.); mahogany logs (259,020 cu. ft.) and lumber (424,721 cu. ft.); pine lumber (138,221 cu. ft.); chicle (575 tons).

British Honduras is bounded on the north by Mexico and on the west and south by Guatemala. It was settled in 1662 by woodcutters from Jamaica. An irregular form of local government continued until 1871, when it became a Crown colony; it was separated from Jamaica in 1884. The governor is assisted by an Executive Council and a partly elected Legislative Council.

The colony's economy is dependent upon timber and other forest exports. Agriculture has never been adequately developed. There are no railways, and road development is backward (about 135 mi. surfaced in 1947). The majority of the population are mestizos of Negro, native Indian and white descent.

The climate is subtropical, with maximum recorded temperature of 98°, and minimum of 50°. Rain falls mostly from May to February, and almost continuously from October through December.

Canada (Dominion)

Area: 3,466,882 square miles.

Population (est. 1946): 12,307,000 (1941: British, 50%; French, 27%; German, 4%; Ukrainian, 2%; others, 17%).

Density per square mile: 3.5.

Governor General: Field Marshal Viscount Alexander of Tunis.

Prime Minister: W. L. Mackenzie King.

Principal cities (census 1941): Montreal, 903,007 (seaport); Toronto, 667,457 (manufacturing center); Vancouver, 275,353 (Pacific seaport); Winnipeg, 221,960 (grain); Hamilton, 166,337 (iron and steel); Ottawa, 154,951 (capital); Quebec, 150,757 (seaport); Windsor, 105,311 (automobiles).

Monetary unit: Canadian dollar.

Religions (census 1941): Roman Catholic, 42%; United Church, 19%; Anglican, 15%; Presbyterian, 8%; Baptist, 4%; others, 12%.

With the second largest continuous land area in the world stretching across the northern part of the North American continent, the Dominion of Canada is one of the world's leading sources of wheat, minerals, and paper and pulp. Unsurpassed in its record of loyalty to the Empire in both World Wars, the Dominion in 1947 also continued its wartime policy of close military and political cooperation with the U.S. **HISTORY.** The Norse explorer Leif Ericsson probably reached the shores of Canada (Labrador or Nova Scotia) in A.D. 1000, but the history of the white man in the country actually began in 1497, when John Cabot, an Italian in the service of Henry VII of England, reached the shore of Newfoundland or Nova Scotia. Canada was taken for France in 1534 by Jacques Cartier. The actual settlement of New France, as it was then called, began in 1604 at Port Royal in what is now Nova Scotia; in 1608 Quebec was founded. France's colonization efforts were not very successful, but French

explorers by the end of the 17th century had penetrated beyond the Great Lakes to the western prairies and south along the Mississippi to the Gulf of Mexico. Meanwhile, the English Hudson's Bay Company had been established in 1670. Because of the valuable fisheries and fur trade, a conflict developed between the French and English; in 1713, Newfoundland, Hudson Bay and Nova Scotia (Acadia) were lost to England.

During the Seven Years' War (1756-63), England extended its conquest, and the British general, Wolfe, won his famous victory over Montcalm outside Quebec (Sept. 13, 1759). By the Treaty of Paris (1763), all Canada passed under English control.

At this time the population of Canada was almost entirely French, but in the next few decades thousands of British colonists emigrated to Canada from the British Isles and from the American colonies. Partly to placate the French who were concentrated in Quebec, Canada was divided into Upper (British) and Lower (French) Canada in 1791. In 1840 the two provinces again were joined under one government, and in 1849 the right of Canada to self-government was recognized. By the British North America Act of 1867, the Dominion of Canada was created through the confederation of Upper and Lower Canada, Nova Scotia and New Brunswick. Prince Edward Island joined the Dominion in 1873. In 1869 Canada had purchased from the Hudson's Bay Company the vast middle west (Rupert's Land) from which the provinces of Manitoba (1870), Alberta and Saskatchewan (1905) were later carved. In 1871 British Columbia joined the Dominion. The country was linked from coast to coast in 1885 by completion of the Canadian Pacific Railway.

During the formative years between 1867 and 1896, the Conservative Party led by Sir John A. Macdonald governed the country, except during the years 1873-78. In 1896 the Liberal Party took over and under Sir Wilfrid Laurier, an eminent French Canadian, ruled until 1911. In World War I, more than 500,000 Canadian soldiers fought for the Allied cause. After the Treaty of Versailles, Canada, a full-fledged nation, was admitted to the League of Nations and appointed its own representatives in foreign countries. By the Statute of Westminster (1931) the British Dominions, including Canada, were formally declared to be partner nations with Britain, "equal in status, in no way subordinate to each other," and bound together only by allegiance to a common Crown. The Liberal Party under W. L. Mackenzie King won the elections in 1935 and was returned to power in 1940 and 1945 (he had previously served as prime minister from 1921 to 1926).

PROVINCES AND TERRITORIES

Provinces	Land area (sq. mi.)	Population (1941 census)
Alberta	248,800	796,169
British Columbia	359,279	817,861
Manitoba	219,723	729,744
New Brunswick	27,473	457,401
Nova Scotia	20,743	577,962
Ontario	363,282	3,787,655
Prince Edward Island	2,184	95,047
Quebec	523,860	3,331,882
Saskatchewan	237,975	895,992
Territories		
Northwest Territories	1,258,217	12,028
Yukon	205,346	4,914

GOVERNMENT. Canada, a self-governing dominion of the British Empire, is a federal union of 9 provinces whose powers are laid down in the British North America Act of 1867. The executive powers nominally rest in the hands of the Governor General, who represents the King and is appointed by the British Government with the approval of the Canadian Government. Actually, the Governor General acts only with the advice of the Canadian Prime Minister and the members of the Cabinet, who at the same time sit in the Dominion Parliament. The Parliament has two houses: a Senate numbering 96 members appointed for life, and a House of Commons numbering 245 members apportioned according to provincial population. Elections are held at least every five years or whenever the party in power is voted down in the House of Commons or considers it expedient to appeal to the people. The Prime Minister is the leader of the majority party in the House of Commons. Laws must be passed by both houses of Parliament and signed by the Governor General in the King's name. The results of Parliamentary elections on June 11, 1945, were as follows: Liberals, 123; Progressive Conservatives, 68; Cooperative Commonwealth Federation, 28; Social Credit, 14; Bloc Populaire Canadien, 2; Independents and other, 10.

The members of the Cabinet include W. L. Mackenzie King (Prime Minister), W. McL. Robertson (Minister without Portfolio), J. A. Glen (Mines and Resources), Louis S. St. Laurent (External Affairs), Alphonse Fournier (Public Works), Lionel Chevrier (Transport), Ian A. Mackenzie (Veterans Affairs), J. L. Isley (Justice), H. F. G. Bridges (Fisheries), C. D. Howe (Supply and Reconstruction), J. G. Gardiner (Agriculture), James J. McCann (National Revenue), Humphrey Mitchell (Labor), J. A. MacKinnon (Trade and Commerce), Paul J. Martin (Health and Welfare), Ernest Bertrand (Postmaster General), Colin Gibson (Secretary of State), Douglas C. Abbott (Finance), Brooke Claxton (Defense) and Joseph Jean (Solicitor General).

The nine provincial governments are nominally headed by Lieutenant Governors

appointed by the Dominion Government, but the executive power in each actually is vested in a cabinet headed by a prime minister, who is leader of the majority party. In eight of the nine provinces the legislature is composed of a one-house assembly elected by the people for 4 years.

In Quebec there is also a second chamber, called the Legislative Council, composed of nominees of the Provincial Government.

JUDICIAL SYSTEM. The judicial system consists of a supreme court in Ottawa (established in 1875), with appellate jurisdiction, and a supreme court in each province as well as county courts with limited jurisdiction in most of the provinces. The Governor General in Council appoints the judges of these courts.

DEFENSE. Canadian armed forces, consisting of the Army, Royal Canadian Air Force and the Royal Canadian Navy, are under the Ministry of National Defense. Conscription was in effect during World War II, but most of the nearly 300,000 men who saw overseas service were volunteers. Canadian casualties were 104,125, including 41,371 dead.

The postwar army strength is projected at 25,000 men, plus a reserve force of 180,000. The navy's strength is set at 10,000 men, plus a reserve force of 18,000, with an active fleet of one aircraft carrier, two cruisers, eight destroyers and numerous ancillary craft. The permanent air force is set at 16,000 men with 150 combat planes.

The Royal Canadian Mounted Police is the constabulary maintained by the Dominion Government. In 1944 it had a strength of about 4,470 men. Its duties include the enforcement of smuggling laws, suppression of traffic in drugs and protection of government buildings and dockyards. It is the sole police force operating in the Northwest Territories and Yukon.

EDUCATION. Control of education was specifically delegated to the provinces by the British North America Act of 1867. Elementary schools in all provinces except Quebec are free, as is secondary education in most provinces. The supreme education authority in Quebec is a council of public instruction with two aides supervising the Roman Catholic and Protestant schools respectively. Fees paid by parents having children of school age help defray the cost of education. In the rest of the provinces the system is non-denominational, and education for the most part is compulsory for all children between the ages of 8 and 14. Of Canada's 18 universities, 6 are state-controlled and 12 are independent of provincial control. Leading universities are Toronto, which belongs to the first group, and McGill (Montreal), the second group.

VITAL STATISTICS. In 1945 the birth rate was 23.8 per 1,000 population and the death rate 9.3 per 1,000.

The immigration movement reached its peak in 1913, when 402,432 immigrants were enumerated. Immigration fell off sharply during World War I but rose in the postwar years to a peak of 167,723 in 1929. Immigration for 1946 totaled 71,719.

AGRICULTURE. Agriculture, including horticulture, fruit-growing and the raising of stock and poultry, is the largest single industry. Of the total land area, 549,660 square miles, or 15.8 percent, consists of agricultural land. Canadian farming is based almost entirely on relatively small individual holdings. Canada is one of the world's greatest wheat-exporting countries; production is concentrated in Manitoba, Saskatchewan and Alberta. The wheat harvest in 1946 was estimated at 440,000,000 bu., second largest on record. Canada is also a leading producer of other cereals, the most important in point of value being oats and barley.

Apple growing, carried on in Nova Scotia, southern Quebec and central Ontario, is the chief horticultural activity; other fruit growing regions are the Niagara and Lake Erie districts and southern British Columbia. Sugar beet cultivation is assuming increasing importance (1945: 618,010 tons). Tobacco is produced in southern Ontario (1946: 141,384,000 pounds). The production of honey and maple sugar is also important. The estimated value of field crops (1945) was \$1,238,645,000.

Stock raising and dairy farming have grown greatly since 1920. Ontario and Quebec are the most important dairying provinces. In 1945 Canada had 9,960,800 cattle, 5,853,100 swine, 2,455,800 sheep and 57,247,800 poultry.

INDUSTRY. Canadian manufactures rely mainly on domestic raw materials; growing industries which depend largely on materials imported in a raw or semi-finished state include the manufacture of automobiles, sugar and rubber goods as well as the iron and steel industry in Nova Scotia, Quebec and Ontario. The latter two provinces account for more than 80 percent of all manufactures. The abundance of cheap water power is one of the chief factors in the growth of Canadian industry. Estimated steel production (1945) was 2,836,000 tons. In 1944 the gross value of manufactured products was estimated at \$9,074,000,000. Most important, in order of value of output, were food, textiles, clothing, chemicals and electrical products.

TRADE. Canada is one of the great trading nations of the world. The bulk of its foreign commerce is in raw or semi-finished products. Commodities exported in 1946 were valued at \$2,312,215,301 (1945: \$3,218,330,353), of which 34.4 percent went to the U. S. and 25.8 percent to the United Kingdom. The ten major exports for that year were newsprint, 11.4 percent; wheat,

10.8 percent; wheat flour, 5.4 percent; lumber, 5.4 percent; wood pulp, 4.9 percent; fish, 3.7 percent; autos and parts, 3.3 percent; bacon and ham, 2.8 percent; aluminum, 2.4 percent; and nickel, 2.3 percent.

Imports for 1946 were valued at \$1,927,279,402 (1945: \$1,585,775,142), of which 75 percent came from the U. S. The principal imports were machinery, coal, automobile parts, petroleum, rolling-mill products, cotton goods, electrical apparatus, engines and boilers, fruit, raw cotton, raw wool, sugar, aluminum, woolen goods, rubber products and farm implements.

COMMUNICATIONS. Because Canada's exports are to a large extent bulky raw materials, cheap water transportation is essential. The country's system of canals, especially those connecting the Great Lakes, forms an integral part of the inland communications system. Canal traffic amounted to 22,733,000 tons in 1944. In 1945, 12,962,000 tons of freight were carried on the Welland Canal alone.

Railway facilities have been improved in relation to the export of wheat from the prairie provinces and to the development of the mineral and wood pulp industries in northern Quebec and northern Ontario. About 90 percent of Canadian railway mileage of 42,500 miles is under the control of two systems, the government-owned Canadian National and the privately-owned Canadian Pacific. Canada's principal merchant marine lines are the Canadian Pacific, which operates a subsidiary ocean steamship company, and the Canadian National, which has minor steamship lines under its control. In 1945, vessels other than coastal entering and clearing Canadian ports amounted to 63,167,000 net tons. In 1942 Canada had 564,538 miles of roads, of which 122,689 were improved and 441,849 unimproved. On April 3, 1946, Canada formally took over 1,500 miles of the Alaska highway. Motor vehicles licensed in 1945 numbered 1,483,000.

Canada's national air service, the Trans-Canada Air Lines, was established in 1937. The number of revenue passengers carried in 1944 was 386,719. In 1946, Trans-Canada was linked directly with New York, Chicago and Cleveland. In 1944, Canada had 1,692,162 telephones and in 1945, 1,759,100 licensed radio sets.

FINANCE. Estimated revenue (1945-46) was \$3,013,185,074; expenditure \$5,136,228,506. The total national debt (Mar. 31, 1946) was \$16,807,000,000. Notes in circulation (Sept. 30, 1946) totaled \$1,080,000,000.

TOPOGRAPHY. Covering the northern part of the North American continent and with an area larger than that of the United States, Canada's topography is extremely diversified. The northeastern region, including most of Quebec, northern Ontario and Manitoba, and the Northwest Terri-

tories, with Hudson Bay in the center, is an important source of minerals, wood pulp and water power. In the east the mountainous maritime provinces have an irregular coast line on the Gulf of St. Lawrence and the Atlantic. The St. Lawrence plain, covering most of southern Quebec and Ontario, and the interior continental plain, covering southern Manitoba and Saskatchewan and most of Alberta, are the principal cultivable areas. They are separated by a forested plateau rising from Lakes Superior and Huron. Westward toward the Pacific, most of British Columbia, Yukon, and part of western Alberta are covered by parallel mountain ranges including the Rockies. The Pacific border of the coast range is ragged with fiords and channels.

CLIMATE. Canada has great variations of climate. South of the Gulf of St. Lawrence, the maritime provinces have an average temperature of 40° for the year and over 60° for the summer months. In Quebec and northern Ontario the winters are cold and the summers average from 60° to 65°. In southern Ontario the average summer temperature is 65°, with an occasional rise to 90°. The prairie provinces have a distinctly continental climate with comparatively short warm summers and long cold winters. In the mountain regions of the west coast, the climate is extremely varied, and the coast itself has a climate similar to that of the southern coast of England. Northwest and northeast of Hudson Bay the climate is too severe for tree growth.

HYDROGRAPHY. Canada has an abundance of large and small lakes. In addition to the Great Lakes on the United States border, there are nine others which are more than 100 miles long and 35 which are more than 50 miles long.

The two principal river systems are the Mackenzie and the St. Lawrence. The St. Lawrence with its tributaries is navigable for over 1,900 miles and is the commercial artery of eastern Canada. The northern parts of Alberta and much of northern British Columbia are drained through the Athabaska and Peace Rivers, first north-eastward toward Lake Athabaska and then north through Slave River to Great Slave Lake and finally northwest through the Mackenzie River to the Arctic Ocean. If measured to the head of Finlay River, the Mackenzie has a length of more than 2,500 miles and is navigable for 1,292 miles.

As most of the Canadian rivers have waterfalls on their courses they are of considerable importance as sources of power. On Jan. 1, 1945, the available horse power at ordinary six months flow exceeded 39,000,000.

MINERALS. Canada's mineral resources are both rich and varied. Mining production in 1946 was valued at \$503,900,000. Metals

come mainly from two widely separated regions, the mountain ranges of the Pacific coast and the province of Ontario. Deposits of copper ore also exist in Quebec and Manitoba. Production of petroleum (8,567,817 in 1945) centers in Alberta.

MAJOR MINERALS 1946

Mineral	Amount
Asbestos	557,194 tons
Coal	17,797,747 tons
Copper	371,606,643 lbs.
Gold	2,828,404 oz.
Lead	357,452,902 lbs.
Nickel	189,665,605 lbs.
Silver	12,870,426 oz.

FORESTS, WILD LIFE AND FISHERIES.

The total area of land covered by forests is estimated at 1,220,405 square miles, of which 770,565 are productive and accessible. Lumber production in 1946 was 2,069,076,000 bd. ft., of which 963,565,000 went to the U. S. Leading types were

spruce (773,861,000 bd. ft.) and Douglas fir (574,649,000 bd. ft.). The manufacture of pulp and paper is one of the leading industries. Newsprint production in 1946 totaled 4,143,392 tons, of which 702,012 went to the U. S.

Fishing is Canada's oldest industry and is carried on along the Atlantic and Pacific coasts and on the inland lakes. The most important fish are salmon, cod, herring, mackerel, lobsters, sardines, halibut, haddock, whitefish and trout. The total value of the products of Canada's fisheries in 1943 was over \$85,000,000.

Fur farming and trapping is also important. Trapping is carried on principally in the North while Quebec, Ontario and Prince Edward Island lead in the number of fur farms. The more important animals raised on fur farms are fox, muskrat, beaver, mink, raccoon and martin. For the year ending June 30, 1944, 6,245,000 pelts valued at \$32,365,000 were taken. Annual fur auctions are held at Montreal and Winnipeg.

Canadian Governors General and Prime Ministers Since 1867

Term of office	Governor General	Term of office	Prime Minister	Party
1867-1869	Viscount Monck	1867-1873	Sir John A. Macdonald	Conservative
1869-1872	Baron Lisgar	1873-1878	Alexander Mackenzie	
1872-1878	Earl of Dufferin	1878-1891	Sir John A. Macdonald	Conservative
1878-1883	Marquess of Lorne	1891-1892	Sir John J. Abbot	Conservative
1883-1888	Marquess of Lansdowne	1892-1894	Sir John S. D. Thompson	Conservative
1888-1893	Baron Stanley	1894-1896	Sir Mackenzie Bowell	Conservative
1893-1898	Earl of Aberdeen	1896(2 mos)	Sir Charles Tupper	Conservative
1898-1904	Earl of Minto	1896-1911	Sir Wilfrid Laurier	Liberal
1904-1911	Earl Grey	1911-1917	Sir Robert L. Borden	Conservative
1911-1916	Duke of Connaught	1917-1920	Sir Robert L. Borden	
1916-1921	Duke of Devonshire	1920-1921	Arthur Meighen	Unionist
1921-1926	Viscount Byng			Unionist-National, Conservative
1926-1931	Viscount Willingdon	1921-1926	W. L. Mackenzie King	Liberal
1931-1935	Earl of Bessborough	1926(3 mos)	Arthur Meighen	Conservative
1935-1940	Baron Tweedsmuir	1926-1930	W. L. Mackenzie King	Liberal
1940-1946	Earl of Athlone	1930-1935	Richard B. Bennett	Conservative
1946-	Field Marshal Viscount Alexander	1935-	W. L. Mackenzie King	Liberal

FALKLAND ISLANDS AND DEPENDENCIES

Governor: Geoffrey M. Clifford.

This sparsely inhabited Crown colony consists of a group of islands in the South Atlantic about 250 miles east of the South American mainland. The chief industry is

sheep raising, and apart from the production of wool, hides and skins and tallow, there are no known resources. The whaling industry is carried on successfully from South Georgia Island; 77,817 barrels of whale oil were exported in 1941.

The islands were discovered by John Davis in 1592. East Falkland Island was claimed for France in 1764, and West Falkland Island for Britain the following year. The French settlement later passed to Spain, and in 1829 was colonized by Argentina. The Argentines were ejected by the British in 1833. In 1914 the Battle of Falkland Islands was fought near the islands, resulting in a British victory; during World War II, Stanley Harbour was an important naval base.

The climate is equable though relatively cold, with temperatures averaging about 47° in midsummer and 37° in midwinter.

JAMAICA AND DEPENDENCIES — Status: Colony.

Capital: Kingston (pop. 1943: 109,056).

Governor: Sir John Huggins.

Foreign trade (1945): exports, £5,137,045; imports, £9,595,587. Chief export: sugar.

Agricultural products: sugar (1946: 161,620 long tons), citrus fruits, bananas, ginger, coffee, pimento.

Jamaica, the largest island in the British West Indies (4,470 sq. mi.) is eighty miles south of the eastern end of Cuba. Its island dependencies include the Turks and Caicos Islands (about 600 mi. N.E.), Cayman Islands (about 300 mi. N.W.) and two uninhabited cays. It was discovered by Columbus in 1494 and remained in Spanish possession until 1655, when it was taken by the British. According to the constitution of Nov. 20, 1944, the Governor is assisted by a House of Representatives of 32 popularly elected members; a Legislative Council (upper house) of 15 members and an Executive Council of 10 members, 5 of whom are elected by the House of Representatives.

Jamaican sites were leased for 99 years to the U. S. in 1940 for naval and air bases.

The colony's economy depends on agriculture, and about 200,000 acres are under cultivation. Sugar took the place of bananas as the chief crop during World War II. Jamaica is virtually the sole source of pimento. Manufacture of consumer's goods has increased considerably in recent years.

Rail mileage totals 299, and highways 2,525. Jamaica's favorable climate makes it attractive to tourists. Temperatures at Kingston range from about 71° to 88°, but are considerably cooler inland. The rainy seasons are in May and October.

LEEWARD ISLANDS—Status: Colony.

Capital: St. John's, Antigua (population 10,000).

Governor: (Vacant).

Foreign trade (1944): exports, £945,876; imports, £1,159,735. Chief export: sugar.

Agricultural products: sugar, cotton, coconuts, citrus fruits, tobacco.

The Leeward Islands constitute a federated group southeast of Puerto Rico; they are divided into four presidencies—Antigua (108 sq. mi.) and dependencies (63 sq. mi.); Virgin Islands (67 sq. mi.); St. Kitts (68 sq. mi.) and Nevis (50 sq. mi.) and dependency (34 sq. mi.); and Montserrat (32.5 sq. mi.). The whole federation has a nominated Executive Council and a partially elected Legislative Council. Each presidency also has a local administration. In 1940, the U. S. acquired a 99-year lease on sites for a naval and air base on Antigua. The islands are predominantly agricultural.

Temperatures average about 76° in January and 81° in August; rainfall is moderate throughout the year.

NEWFOUNDLAND AND LABRADOR—Status: Colony (dominion status suspended).

Capital: St. John's (pop. 1945: 43,179).

Governor: Sir Gordon Macdonald.

Foreign trade (1945-46): exports, \$62,558,498; imports, \$65,898,707. Chief exports: newsprint, fish.

Minerals: iron ore (1946: 1,272,838 tons), lead ore, zinc, fluorspar, copper, gold, limestone.

Sea products (1945): total exports, \$21,869,000; cod, 55,922 tons; cod liver oil, 332,558 imperial gal.; herring, salmon, lobster.

The island of Newfoundland (42,734 sq. mi.) lies east of Canada at the mouth of the Gulf of St. Lawrence. Its mainland dependency, Labrador (110,000 sq. mi.) is to the northwest, across the Strait of Belle Isle.

The first authenticated discovery was by John Cabot in 1497. The island was annexed to Britain in 1583; France recognized British sovereignty by the Treaty of Utrecht in 1713, but retained important fishing concessions. Newfoundland was a British dominion until Feb. 15, 1934, when financial difficulties forced suspension of its constitution. Full legislative and executive power is now vested in a governor who acts on advice of a six-member commission—three from Newfoundland and three from the United Kingdom. In Jan. 1941, several sites were leased to the United States for air bases.

Fishing is the main industry; Newfoundland's waters abound in cod. More than half the colony is forested, and the manufacture of newsprint is the second industry. Agriculture is of little importance, but there are extensive mineral resources. The international airport at Gander is used by half a dozen lines flying the North Atlantic.

Newfoundland's climate is moderated by proximity to the ocean. Extreme range of temperature is between 0° and 81°, with February the coldest month and August the warmest. Both rainfall and snowfall are heavy.

TRINIDAD AND TOBAGO—Status: Colony.**Capital:** Port of Spain (pop. 1946: 92,368).**Governor:** Sir John Shaw.**Foreign trade (1945):** exports, BWI \$59,367,-581; imports, \$65,030,924. **Chief exports:** petroleum, sugar.**Agricultural products:** sugar (1946: 109,602 long tons), cacao, coconuts.**Minerals:** petroleum (1946: 20,232,641 barrels), asphalt (1946: 93,851 long tons).

The islands of Trinidad and Tobago are 16 and 21 miles, respectively, off Venezuela just north of the Orinoco delta. Both were discovered by Columbus in 1498, and remained Spanish possessions until 1797, when the British took them. They are administered by a governor. In 1941 the United States was granted 99-year leases on the islands for naval and air bases covering a total of 25,000 acres.

The soil is rich for the growing of tropical products; sugar and cacao are the principal crops. Trinidad is the leading oil producer of the British Empire, and the world's most notable source of asphalt, found in Pitch Lake, thirty-eight miles southeast of Port of Spain. Port of Spain is the chief port, and a transshipment point for Orinoco trade. About a third of the population is East Indian.

Trinidad's climate is tropical, with a mean annual temperature of 80°. The rainy season is from May to January (except October).

WINDWARD ISLANDS—Status: Colony.**Capital:** St. George's, Grenada (pop. 1946: 5,755).**Governor:** Sir Arthur Grimble.**Agricultural products (1945 exports):** arrowroot (St. Vincent), 2,288 tons; nutmeg (Grenada), 2,341 tons; mace (Grenada), 338 tons; cacao.

These islands, four in number, form the southern portion of the Lesser Antilles in the Caribbean; they extend approximately 250 miles from the French colony of Guadeloupe on the north to the British colony of Trinidad on the south. Their total area of about 820 square miles divides as follows: Dominica, 304; St. Lucia, 233; St. Vincent, 150; Grenada, 133. The four units are not federated and have no common legislature or laws, although they do have a common governor.

More than two-thirds of the inhabitants are Negroes, nearly one-third mulatto, and about 2 percent white. Agriculture is the only industry. St. Vincent has a virtual monopoly on the world supply of arrowroot, and Grenada furnishes about 40 percent of the world's nutmeg.

All the islands are of volcanic origin. The climate is pleasant, although rainfall is heavy, particularly in summer. The temperature in January averages 77°, in September, 80°.

ASIA**ADEN—Status: Colony and Protectorate.****Governor:** Sir Reginald S. Champion.

The British colony and protectorate of Aden is situated on the volcanic southern tip of the Arabian peninsula, along the Gulf of Aden. The colony (port) of Aden was annexed to Britain in 1839 and was part of the Bombay Presidency until 1932, when it became a separate province with the chief commissioner responsible to the Indian government. In 1937 it was transferred from Indian to Imperial control as a Crown colony. It is administered by a governor and commander in chief aided by an Executive Council. The sultans who rule their respective territories in the protectorate are responsible to him.

Aden colony is essentially a transshipment point and bunkering station and the commercial center for the Yemen and the African coast opposite. Aden airport is a station on the Khartoum-Karachi air route. Agriculture is unimportant except for some coffee and tobacco, and manufactures are limited to salt, cigarettes and native dhows.

BAHREIN ISLANDS—Status: Protectorate and Sheikdom.

These islands form an archipelago off Arabia's east coast and are nominally an independent sheikdom, ruled by Sheik Sir Salman bin Hamad al Fhalifah, but are actually a protectorate of Great Britain, which is represented by a political agent. They are the center of the Persian Gulf pearl fisheries and the site of an airport on the London-Australia route. The concession for exploitation of petroleum deposits, discovered in 1932, is held by an affiliate of U. S.-owned interests. Output in 1943 was 6,000,000 barrels. Agriculture is of some importance. Most of the trade of the Saudi Arabian provinces of Nejd and Hasa pass through Bahrein. Chief exports are rice, cotton goods, pearls, coffee and tea. The capital and principal port is Manama (pop. 25,000) on Bahrein, the principal island.

BORNEO**STATE OF NORTH BORNEO—Status: Colony.****Capital:** Sandakan (population 13,826).**Governor:** E. F. Twining.**Foreign trade (1940):** exports, £2,386,000; imports, £1,186,000. **Chief export:** rubber.**Agricultural products:** rubber, rice, corn.**Forest products:** timber, cutch, rattans.

The State of North Borneo, constituting the extreme northern portion of the island of Borneo, consists largely of highlands and occasional open valleys and plateaus. The territory was a British protectorate administered under a royal charter by the British North Borneo Company from 1881

until July 15, 1946, when it assumed the status of a Crown colony. It was occupied by Japanese troops from 1942 until 1945. Labuan (pop. 7,500; area, 30 sq. mi.), a small island off the North Borneo coast, was transferred from the jurisdiction of the Straits Settlements to that of North Borneo in 1946.

The population is comprised largely of aboriginal tribesmen living on a very primitive level of culture and social organization. Mineral resources are believed to be considerable, but the colony's income is based on agricultural and jungle produce.

The climate of North Borneo is tropical, with a mean annual temperature range of only 3°, although extremes of 64° and 91° have been recorded. The total rainfall varies between 60 and 180 inches annually and is heaviest in the last three months.

BRUNEI—Status: Protectorate.

Capital: Brunei (population 12,000).

Sultan: Ahmed Tajudin Akhazul Khairi Wad-dia.

British Resident: W. J. Peel.

Foreign trade (1940): exports, £1,122,680; imports, £453,502. **Chief export:** petroleum.

Agricultural products: rice, rubber.

Brunei lies on the northwestern coast of Borneo, entirely surrounded by Sarawak. It was placed under British protection in 1888, and in 1906 a treaty was concluded whereby the native sultan agreed to hand over administration of the state to a British resident. Japanese troops occupied Brunei from 1942 until 1945.

Most of the inhabitants are Malays. The bulk of the population lives in and around the capital, situated on the Brunei River 9 miles from its mouth. The interior is largely forested and contains rich timber.

Brunei's climate is comparable to that of North Borneo, except that the wet season is longer, often lasting until March.

SARAWAK—Status: Colony.

Capital: Kuching (population 34,000).

Governor: Sir Charles Arden Clarke.

Chief export: petroleum.

Agricultural products: rice, sago, pepper, rubber.

Minerals: petroleum, gold, silver, coal.

Sarawak extends along the northwestern coast of Borneo for about 500 miles. In 1841 part of the present territory was granted by the sultan of Brunei to Sir James Brooke. The state, enlarged by additional concessions made between 1861 and 1905, continued to be ruled by members of the Brooke family until the Japanese occupation in Dec., 1941. A British protectorate since 1888, Sarawak became a Crown colony July 15, 1946, through agreement between the British government and the then ruling rajah, Sir Charles Vyner Brooke.

The colony is mountainous and very well watered; inland communication is largely by water. Most of the inhabitants are Malays, Dayaks and Chinese. The principal mineral is petroleum, which was discovered at Miri in 1909 and subsequently worked by Sarawak Oilfields, Ltd. There are also important forest resources. Under the enlightened rule of the Brookes, Sarawak had been developed into a highly organized community prior to the Japanese invasion.

Sarawak's climate, though tropical, is healthful; the temperature seldom rises above 90° and falls to 70° at night. Average annual rainfall at Kuching is 160 inches.

Burma (Self-governing colony)

Area: 261,749 square miles.

Population (est. 1941): 16,823,798 (Burmans, 60%; Shans, 7%; Chins, 2%; Kachins, 1%; Indians, 6%; Chinese, 1%; Indo-Burmans, 1%; others, 22%).

Density per square mile: 64.3.

Governor: Sir Hubert Rance.

Premier: Thakin Nu.

Principal cities (est. 1942): Rangoon, 501,219 (capital, chief port); Mandalay, 150,000 (river port, upper Burma); Moulmein, 70,000 (seaport); (census 1931) Bassein, 45,662 (river port).

Monetary unit: Burmese rupee.

Languages: Burmese, English.

Religions (1931): Buddhist, 84.3%; Animist, 5.2%; Mohammedan, 4%; Hindu, 4%; Christian, 2.3%; others, .2%.

HISTORY. In the 18th century, the Burmese stoutly resisted the efforts of British, Dutch and Portuguese traders to establish posts on the Bay of Bengal. The British, operating from India, were persistent and by 1886 were able through military force to annex Burma to India. On April 1, 1937, the British separated Burma from India and set it up as a Crown colony with its own legislature and a British governor.

For hundreds of years a battlefield of petty princes, Burma became a key battleground in World War II largely because the 800-mile Burma Road was the Allies' vital supply line to China. The Japanese invaded the country in Dec., 1941, and by May, 1942, had occupied most of it, cutting the road. In Aug., 1942, the Japanese set up a puppet government under Dr. Ba Maw.

After one of the most difficult campaigns of the war, Allied forces liberated most of Burma prior to the Japanese surrender on Aug. 14, 1945. Civil government was resumed in Oct., 1945, but the native nationalist feeling continued strong, and British control was maintained only with difficulty. U. Aung San, who had led Burmese patriots against the Japanese in 1945, emerged as the strongest native political leader. At the elections of April 9, 1947, his Anti-Fascist People's Freedom League won a majority; Aung San thereupon declared

that Burma would sever its connections with the British Empire.

GOVERNMENT. According to an Anglo-Burmese agreement signed Jan. 27, 1947, the Constituent Assembly elected in April, 1947, was to determine the future constitution of Burma. The Anti-Fascist People's Freedom League won a majority in the elections, and it appeared likely in mid-1947 that the Assembly would declare Burma a republic bearing a relationship to Britain analogous to that of Eire.

The interim government was headed by the Crown-appointed governor assisted by an appointed Executive Council (cabinet) which carried on the day-to-day administration of the country. On July 21, 1947, assassins broke into a meeting of the Executive Council and killed Aung San and six other ministers. A new council was formed headed by Thakin Nu, a close associate of Aung San.

SOCIAL AND ECONOMIC CONDITIONS. Burma had 27,015 schools in 1940, with enrollment of 851,922. More than half these institutions, however, are monastic schools. Because of the many Buddhist village schools, the percentage of wholly illiterate men is small. There is a university at Rangoon with 2,365 students.

The natives in general are Mongolian; the Burmese are the most advanced. British Indians, settled in the delta region, supply most of the coolie labor, while the Chinese constitute the artisan and merchant class. Buddhism, the national religion, profoundly affects the national character; every village has its pagoda and monk.

Burma is essentially agricultural, with crop growing concentrated in the delta and river valleys. It is a leading producer of rice, the staple food, which occupies two-thirds of the cultivated area. Production in 1944-45 was 230,000,000 bushels. Crops grown in the dry zone in upper Burma include millet, cotton, groundnuts and sesamum. Other crops include tobacco, fruit, vegetables and cereals. About 1½ million acres are under irrigation. The number of rubber plantations has increased. The principal domestic animals are water buffalo, used as a beast of burden in the delta, and small humped oxen, which predominate in other areas.

Shortly before World War II, there were 1,019 factories with 86,400 workers. Leading industries include silk weaving and dyeing, rice husking, oil refining and wood carving.

The whole Burmese economy was disrupted during the Japanese occupation, and rehabilitation has made slow progress, hampered by lack of heavy material, consumer's goods and transport, and in some areas by extreme lawlessness.

Exports in 1940-41 totaled £41,535,000, and imports £22,162,500. Rice accounted for approximately two-fifths of the exports; others included lead, tin, petroleum, other minerals and teak. Imports included coal, iron and steel. More than one-third of the export trade and half the import trade was with India.

Revenue in 1941-42 was estimated at £12,847,500; expenditure, £13,710,000. The public debt was £38,510,560.

The principal commercial arteries are the Irrawaddy, navigable for 900 miles to Bhamo, and its tributaries. Regular steamer service is maintained to Bhamo. Railways designed to supplement river transport totaled 2,060 miles in 1940, all state-owned. There are no rail connections with India or any other country. The length of improved roads was 6,811 miles in 1940. In addition, the Burma Road connects Lashio, a rail terminus in northern Burma, with Kunming, China.

TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE. Slightly smaller than Texas, Burma is divided into three natural regions: the Arakan Yoma, a long, narrow mountain range forming the barrier between Burma and India; the Shan Plateau in the east, extending southward into Tenasserim; and the Central Basin running down to the flat, fertile delta of the Irrawaddy in the south. This delta contains a network of inter-communicating canals and nine principal mouths.

Mineral resources are considerable but, in many cases, undeveloped. Production by the Burmah Oil Company, Ltd., in 1939, was 7,396,000 barrels. Other minerals include lead, silver, tin, zinc, nickel, cobalt, copper, gold, iron ore, molybdenum, coal, rubies, sapphires and jade.

More than half of Burma is forested, with government reserves totaling 31,637 square miles. Teak, valuable for naval construction, is the main timber product. Its cutting is strictly controlled. Fisheries are exploited both along the coast and inland.

Burma forms part of the Asiatic monsoon region, but its climate is modified by the topography. There are three seasons: (1) cool and rainless (November through February); (2) hot and rainless (March through May) and (3) rainy (June through October). At Rangoon the annual temperature range is only 10°; at Mandalay, about 20°. Annual rainfall at Rangoon is about 100 inches; at Mandalay, 33.4 inches.

CEYLON—Status: Self-governing colony.

Capital: Colombo (population 284,155).

Governor: Sir Henry Monck-Mason Moore.

Foreign trade (1946): exports, 713,600,000 rupees; imports, 585,200,000 rupees. Chief exports: tea, rubber.

Agricultural products: tea (exports 1945: 114,614 tons), rubber (1946: 106,000 short tons), rice, copra.

The island of Ceylon lies in the Indian Ocean, separated from India on the north-west by the Gulf of Manaar and Polk Strait. It was visited in 1505 by the Portuguese, who later settled there but were ousted in the middle of the 17th century by the Dutch. An English force took over the island in 1796, and it became a Crown colony in 1798. Under a constitution granted in 1946, Ceylon became a self-governing colony with a bicameral legislature, a prime minister and a cabinet appointed by the governor but responsible to the legislature except with regard to defense and foreign affairs. On June 18, 1947, Ceylon was offered dominion status.

The Royal Navy has an extensive base at Trincomalee, and during World War II the headquarters of the Southeast Asia Command were at Kandy. The Maldive Islands, about 450 miles to the southwest, are a dependency.

Ceylon's heterogeneous population included, in 1943, 4,113,000 Sinhalese, 1,527,000 Tamils, 389,000 Moors, 40,000 Burghers (descendants of early Dutch settlers) and Eurasians, and 11,000 Europeans. Ceylon has one of the highest birth rates in the world. The principal religions are Buddhism (about 60 percent), Hinduism (about 20 percent) and Christianity (about 10 percent).

Ceylon's prosperity depends upon agriculture; tea and rubber, the main products, are grown largely on plantations.

During World War II, Ceylon was compelled not only to grow many of the foodstuffs formerly imported but to increase its exports on a vast scale. A steel-rolling plant was established in 1941, as well as other factories for new products.

A distinctive feature of Ceylon's climate is the monsoon, which appears in May and October-November. Colombo's temperature does not vary much from the high 80's.

CYPRUS—Status: Colony.

Capital: Nicosia (population 28,186).

Governor: Lord Winstler.

Foreign trade (1945): exports, £3,532,787; imports, £5,330,260. Chief exports: foodstuffs, copper concentrates.

Agricultural products: barley, wheat, potatoes, wine, fruit.

Minerals: copper ore (concentrates), pyrite ore.

Cyprus, third largest island in the Mediterranean, is roughly equidistant from Asia Minor to the north and Syria to the east. The site of early Phoenician and Greek colonies, it passed in 1571 from the rule of Venice to that of the Ottoman Empire, under which it remained until 1878, when it was ceded to Great Britain for administrative purposes. On the outbreak of hostilities with Turkey in World War I (Nov. 5, 1914), the island was formally annexed to Great Britain.

The governor is advised by a nominated Executive Council, but he alone possesses the lawmaking power.

Jewish refugees who attempted illegal entry into Palestine during 1946 and 1947 were shipped to Cyprus by the British for internment.

The people are mainly Greeks and Turks, although there is an Armenian colony and a distinct, though small, Latin colony. More than 80 percent of the population is Christian. Agriculture is the principal industry. Sponge fishing is also important, as well as copper mining.

The mean annual temperature is about 69°; annual rainfall averages about 19 inches. A cool, wet season lasts from October to March.

HONG KONG—Status: Colony.

Capital: Victoria (population 447,829).

Governor: Sir Alexander Grantham.

Foreign trade (1946): exports (in Hong Kong dollars), \$765,634,950; imports, \$933,474,552. Chief export (and import): food and provisions.

Agricultural products: rice, sugar cane.

Major industries: shipbuilding, rope making, cement, sugar refining, textiles.

The colony of Hong Kong comprises the island of Hong Kong, Stonecutters' Island, and the Kowloon peninsula and the New Territories on the adjoining mainland. The island of Hong Kong, located at the mouth of the Canton River about 90 miles southeast of Canton, was ceded to Britain in 1841. Stonecutters' Island and Kowloon were annexed in 1860, and the New Territories, which are mainly agricultural lands, were leased from China in 1898 for 99 years. Hong Kong was attacked by Japanese troops Dec. 7, 1941, and surrendered the following Christmas Day. It remained under Japanese occupation until Sept., 1945.

Possessing an excellent natural harbor 17 miles in extent, the only safe deep-sea anchorage between Shanghai and Indo-China, Hong Kong is the entrepôt for trade throughout southern China and the western Pacific. Re-exports normally constitute about two-thirds of the imports and nine-tenths of the exports. The colony is also an important British military and naval base.

The cities of Victoria and Kowloon contain the greater part of the population, which is overwhelmingly Chinese. Besides those Chinese engaged in agriculture or industry, a large population lives in sampans or junks either in Victoria Harbour or neighboring bays, supporting itself by fishing or by laboring on the wharves. About 20 percent of the total area of Hong Kong is under cultivation, mostly in the New Territories. Manufacture of consumer's goods, both for local consumption and for export, is also important.

Hong Kong has an agreeable climate, although violent typhoons sometimes descend upon the colony. The average annual temperature is 72°, ranging from 59° in February to 82° in July. The summer is the rainy season.

MAYLAYAN UNION and SINGAPORE—Status: Protectorates and Crown Colony.

Capital: Singapore (pop. 1937: 520,164).

Governor General: Malcolm MacDonald.

Governor of Malayan Union: Sir Gerard Edward Gent.

Governor of Singapore: Sir Franklin Gimson.

Chief export: rubber.

Agricultural products: rubber (1946: 403,207 long tons), rice, coconuts.

Minerals: tin ore, iron ore, tungsten, bauxite, manganese ore.

Forest products: timber, gutta-percha, areca nuts.

British Malaya consists of semi-dependent states occupying most of the Malay Peninsula and the island of Singapore off the peninsula's southern tip, together with several smaller islands. The native states were brought under British administration by a process of commercial and political exploitation in the late 19th and early 20th centuries. Singapore, founded in 1819 by Sir Stamford Raffles, had been developed into the principal British naval base in the Far East prior to World War II. Japanese troops invaded the Malayan States in December, 1941, and captured Singapore February 15, 1942.

By Orders in Council effective April 1, 1946, the Malayan Union was formed from the former "Federated Malay States"—Perak, Pahang, Selangor, Negri Sembilan—the former "Unfederated Malay States"—Johore, Trengganu, Kelantan, Kedah and Perlis—and all parts of the former "Straits Settlements" except Singapore—thus including Penang and Malacca. The small island of Labuan, off Borneo, was transferred to jurisdiction of North Borneo. The Crown colony of Singapore, comprising the island of Singapore and its dependencies—the Cocos or Keeling Islands, and Christmas Island—remains outside the Malayan Union. The new plan met vigorous opposition, and on July 24, 1947, a British white paper proposed the replacement of the Malayan Union with a Federation of Malaya which would have a federal legislature. British interference in native state affairs would be limited to defense and foreign affairs, although the native sultans would still accept British advice. The governor would be replaced by a high commissioner.

Rubber and tin form the basis of the area's prosperity. Over 60 percent of the cultivable area is devoted to the growing of rubber, and prewar production accounted for 40 percent of the world supply. Production in 1947 was on a prewar level. In 1940 Malaya produced 33.2 percent of the world's output of tin.

The climate of Singapore, principal city of the area, is hot and humid, with practically no seasonal change; mean average temperature is 80°. The average number of rainy days is about 173.

India

On Aug. 15, 1947, there emerged on the vast subcontinent of India two sovereign independent nations—Union of India with a majority of Hindus, and Pakistan with a majority of Moslems—each a self-governing dominion in the British Commonwealth of Nations, linked to Britain only by a common allegiance to the Crown. Extended communal disturbances, particularly in the Punjab, marked the transfer of power.

History of India Prior to Partition

The Aryans or Hindus who invaded India between 2400 and 1500 B. C. from the northwest found a land already well civilized. Buddhism, founded in the 6th century B. C., had spread through northern India. The first exact date in Indian history is 327 B. C., the year that Alexander the Great invaded India. Meanwhile India continued to be divided into scores of rival states.

In 1526, Mohammedan invaders founded the great Mogul empire, centered on Delhi, which lasted at least in name until 1857. Akbar the Great (1542–1605) strengthened this empire and became the ruler of a greater portion of India than had ever before acknowledged the suzerainty of one man. The long reign of his great-grandson, Aurangzeb (1658–1707) represents both the culmination of Mogul power and the beginning of its decay.

Vasco da Gama, the Portuguese explorer, visited India first in 1498, and for the next hundred years the Portuguese had a virtual monopoly on trade with the subcontinent. Meanwhile, the English founded the East India Company, which set up its first factory at Surat in 1612 and began expanding its influence, fighting against the Indian rulers and the French, Dutch and Portuguese traders simultaneously.

Bombay, taken from the Portuguese, became the seat of English rule in 1687. The defeat of French and Mohammedan armies by Lord Clive in the decade ending in 1760 laid the foundation of the British Empire in India. From then until 1858, when the administration of India was formally transferred to the British Crown following the great mutiny of native troops in 1857, the East India Company was constantly occupied with the suppression of native nationalists and the extension of British rule.

POLITICAL SUBDIVISIONS OF INDIA PRIOR TO 1947

NOTE: Status of each province and state and agency after partition in Aug. 1947 is indicated by numeral in parentheses following name: (1) Union of India; (2) Pakistan; (3) Independent; not declared for either dominion; (4) Partitioned between Union of India and Pakistan; (5) Not settled.

Political subdivision	Area, sq. mi.	Population, census 1941
Provinces	865,446	295,808,722
Ajmer-Merwara (1)	2,400	583,693
Andamans and Nicobars (1)	3,143	33,768
Assam (1)*	54,951	10,204,733
Baluchistan (2)	54,456	501,631
Bengal (4)	77,442	60,306,525
Bihar (1)	69,745	36,340,151
Bombay (1)	76,443	20,849,840
Central Provinces and Berar (1)	98,575	16,813,584
Coorg (1)	1,593	168,726
Delhi (1)	574	917,939
Madras (1)	126,166	49,341,810

*Sylhet district to Pakistan.

After World War I, in which even the Mohammedan states of India sent troops to fight beside the Allies, Indian nationalist unrest rose to new heights under the leadership of a little Hindu lawyer, Mohandas K. Gandhi, called Mahatma Gandhi. His tactics, of a politico-religious nature, called for non-violent revolts against British authority. He soon became the leading spirit of the all-India Congress Party, which was the spearhead of Indian revolt against British rule. In 1919 the British gave added responsibility to Indian officials, and by an act passed in 1935 India was given a federal form of government and a measure of self-rule.

During the 1940's the policy of both the wartime coalition government of Britain and later the Labor Government envisaged an unpartitioned India as a self-governing federal dominion including both British India and the native states. In 1942, with the Japanese pressing hard on the eastern borders of India, the British war cabinet decided to send Sir Stafford Cripps to India to try to reach a political settlement with nationalist leaders. The mission failed. Shortly thereafter the Congress Party took the position that the British must quit India. In August 1942, fearing mass civil disobedience, the Government of India carried out widespread arrests of

Congress leaders including Gandhi, Jawaharlal Nehru and Maulana Abul Kalam Azad, president of the Congress Party. Sections of the nationalist movement, mostly under the leadership of the socialist wing, went underground.

Gandhi was released in May, 1944, and other leaders later. Negotiations for a settlement were resumed and they proved fruitless until the British Labor Government sent a cabinet mission to India in 1946 consisting of Lord Pethick-Lawrence, A. V. Alexander and Cripps. The mission obtained the agreement of the Congress Party and Mohammed Ali Jinnah's Moslem League to a long-term plan for a constitution based on three separate groups of provinces with a minimal center. However, agreement was not reached on an interim government and the Moslem League later reverted to its position of unconditional partition. Finally, in February, 1947, the Labor Government announced its determination to transfer power to "responsible Indian hands" by June, 1948, even if a constitution had not been worked out by that time.

With the appointment at the same time of Lord Mountbatten as Governor General, events moved swiftly. By early June, 1947, agreement was reached on the partitioning of India along religious lines (a plan pre-

vously opposed by the predominant Hindus and by Britain) and on the splitting of the provinces of Bengal and the Punjab, which the Moslems had claimed in their entirety.

The Indian Independence Act, passed quickly by both houses of the British Parliament, received royal assent on July 18, 1947, and on Aug. 15 the Indian Empire, united under British rule for almost a century, passed into history.

INDIA PRIOR TO PARTITION

DEFENSE. The Indian Army in 1940 had 248,953 regulars and 42,773 reserves. By the end of World War II the strength rose to 2,115,737. Indian units, usually segregated by race and creed, served with distinction in Italy and Burma during World War II. Units of the Royal Indian Navy served throughout the world under Allied command.

Upon the transfer of power to the two dominions in 1947, a rough division of the Indian armed forces was made into Moslem and non-Moslem forces, and each dominion took over operational control of its own units. A more thorough division by voluntary transfer on a communal basis took place later, after the staffs of the respective dominion forces were set up. Both governments placed high-ranking British officers in command of their respective armies, air forces and navies. British troops were quickly evacuated from India after the transfer of power, and each dominion took over responsibility for the maintenance of law and order.

EDUCATION. In 1943 British India had 153,380 recognized primary schools for males with 8,566,838 students, and 22,654 for girls with 3,027,420 students. There were 13,536 secondary schools for males with 2,324,618 students, and 1,955 for females with 413,159 students. There also were 15,742 unrecognized schools, those not conforming to government standards, with 464,693 students; and several thousand special schools. British India had 15 universities in 1941 with enrollment of 109,098 men and 5,006 women.

AGRICULTURE. Even in good crop years, India has not been quite self-sufficient in food production. In 1942, about 260,000,000 acres were cultivated, about 20 percent by irrigation. A third of the cropland (1945-46: 79,885,000 acres) is devoted to rice, of which India grows a quarter of the world total. Cotton, grown especially in Bombay and the Central Provinces, is the big money crop. In this, India ranks second to the United States and grows about 15 percent of the world total. In Bengal is grown a large share of the world's jute. A universal crop in India is the mixture of groundnuts, sesame, rape, mustard and linseed, which yields seeds for vegetable oil. The 1945-46 pepper crop amounted to 15,100 long tons.

PRODUCTION OF MAJOR AGRICULTURAL CROPS

Crop	Year	Short tons
Barley	1943	582,014
Cotton	1945	688,000
Jute	1946	800,000
Rice	1945-46	26,249,000
Rubber	1945	17,500
Sugar cane	1945-46	5,387,000
Tea	1943	275,000
Wheat	1945	12,605,000

Cattle are used for plowing and hauling throughout India, except in the delta tracts, where water buffalo do the work, and in the Indus Valley, where the camel predominates. The 1940 livestock census (excluding the United Provinces and Orissa) showed 130,757,765 cattle and oxen, 35,760,493 water buffalo, 961,563 camels, 49,717,044 goats, 1,710,965 horses, 1,734,679 mules and asses and 45,107,062 sheep.

MANUFACTURING. India, whose factories doubled in number from 1922-42, is among the eight leading industrial countries of the world. Cotton textiles comprise the biggest industry—401 mills in 1945 produced 802,500 short tons of yarn and 4,687,000,000 yards of cloth. In 1940, a total of 303,777 persons worked in 108 jute mills. In 1943 the total number of factories was 13,209, with 2,436,312 workers. Plants making or processing food, chemicals, tea, iron and steel are of especial importance. The Tata Iron and Steel Works in Bihar have an annual capacity of over 1,000,000 tons of pig iron. Indian pig iron production in 1945 totaled 1,494,000 short tons.

TRADE. Exports in 1945-46 were £171,000,000, imports £153,000,000, and re-exports £13,000,000. About 56 percent of the imports came from the British Commonwealth, which took 42 percent of the exports. Leading exports were jute yarns and manufactures, tea, cotton yarns and manufactures, and raw and waste jute.

COMMUNICATIONS. In 1939-40, total tonnage of vessels in foreign trade handled at ports in British India was 20,936,550, of which about 65 percent was British. Tonnage handled in the inter-port trade totaled 27,282,326. Rail mileage in 1943 was 40,925, mostly Imperial State Lines. Passengers carried in 1942-43 totaled 622,333,110; freight, 95,253,000 tons. Highway mileage in 1942 totaled 347,132, of which 261,340 were unsurfaced. Licensed cars and taxis in British India in 1940 numbered 94,788.

MINERALS. India's most valuable mineral is coal, deposited throughout most of the subcontinent. Manganese ore is mined in the Central Provinces, and gold in Orissa. Assam and the Punjab produce oil. Other minerals include iron ore, crude chromite, monazite, diamonds, magnesite, zircon, silver, graphite, gypsum, tungsten ore and sapphires.

PRODUCTION OF MAJOR MINERALS

Mineral	Year	Amount
Coal	1945	29,119,000 tons
Gold	1945	170,000 oz.
Iron ore	1943	2,700,000 tons
Manganese ore	1943	668,800 tons
Petroleum	1944	2,500,000 bbl.

TOPOGRAPHY. India, which has extreme dimensions both north-south and east-west of about 1,900 miles, is roughly a great triangle. The apex points south. The base, in the north, is the Himalayas, south of which lie extensive plains drained by the Ganges, Sutlej-Indus and Brahmaputra river systems. The great Indo-Gangetic plain extends from the Bay of Bengal on the east to the Afghan frontier and the Arabian Sea on the west. It is the richest and most densely settled part of the subcontinent, containing more than half of the population. Another distinct natural region is the Deccan, a plateau of 2,000 to 3,000 feet elevation, occupying the southern or peninsular portion of the subcontinent. In several regions, the Deccan is quite mountainous.

Part of the new Union of India are several groups of islands—the Laccadives (14 islands totaling about 80 sq. mi.) in the Arabian Sea; and the Andamans (204

islands totaling 2,508 sq. mi.) and the Nicobars (19 islands totaling 635 sq. mi.) in the Bay of Bengal.

India's three great river systems, all rising in the Himalayas, have extensive deltas. The Ganges flows south and then east for 1,500 miles across the northern plain to the Bay of Bengal; its delta begins 220 miles from the sea. The Indus, starting in Tibet, flows northwest for several hundred miles before turning southwest toward the Arabian Sea; it is important for irrigating arid areas in western India (now Pakistan). The Brahmaputra, also rising in Tibet, flows eastward first and then south into India and the Bay of Bengal.

CLIMATE. India's climate varies from temperate in the north to tropical in the south, where temperatures are almost constant the year around. During the November-February cool season, northern India has a climate like that of the Riviera. From March to June steadily rising temperatures reach a peak sometimes as high as 115°, and then comes the southwest monsoon. Rainfall is heavy in most of India, averaging 50 to 60 inches in Assam and Bengal, and reaching 500 inches in the Garo hills of Assam. Northwest India receives the least rainfall.

Union of India (Dominion)

Area: 1,050,000 sq. mi.*

Population: 295,000,000* (Hindu [predominant], Moslem, Sikh, Christian, Buddhist).

Governor General: Rear Admiral Earl Mountbatten of Burma.

Prime Minister: Pandit Jawaharlal Nehru.

Principal cities (census 1941): Calcutta, 2,108,891 (chief port); Bombay, 1,489,883 (seaport; cotton and textiles); Madras, 777,481 (seaport); Ahmedabad, 591,267 (manufacturing); Delhi, 521,849 (capital); Cawnpore, 487,324 (textiles, leather); Amritsar, 391,010 (Sikh holy city).

Monetary unit: Rupee.

Principal languages: Hindustani tongues, Bengali, Punjabi, Bihari, Marathi, Tamil, Telugu.

*Unofficial estimate based on 1941 census; no definitive statistics available in 1947.

The Union of India is a self-governing dominion of the British Commonwealth, with actual administration of the government in the hands of the prime minister and his cabinet, who are responsible to the Constituent Assembly. The latter body, popularly elected, is to draft a constitution for the Union which will determine its future status. It is likely that the Assembly will choose a republican form of government rather than continued dominion status. The provinces of British India remaining within the Union continue to have representative forms of government under dominion-appointed governors

As a successor state to India, the Union comprises a large proportion of pre-1947 India, including most of the British Indian provinces, other areas under the administration of British India, and most of the 560-odd native states. Unavoidably, large Moslem and Sikh minorities are contained within its borders—a factor which led to widespread rioting and inter-dominion migration after the transfer of power in August, 1947.

The new dominion is one of the largest and richest nations in the world, containing most of India's industrial wealth and natural resources, together with most of India's large cities.

Most of the roads, railways, seaports and airfields went to the Union of India. It will also be left with much of the known mineral resources of the subcontinent with the exception of chromite. It has almost all the factories of the major industries. The largest dams remain in the new Union, though there are greater potential sources of hydroelectric power in Pakistan. The Union has large food resources but will have a deficit for some time.

The first cabinet was headed by Pandit Jawaharlal Nehru who also held the portfolios for Foreign Affairs and Scientific Research. The next most important figure in the cabinet was Vallabhbhai Patel, Minister for Home, States, Information and Broadcasting.

Pakistan (Dominion)

Area: 290,000 sq. mi.*
Population: 70,000,000* (Moslem [predominant], Hindu, Sikh).

Governor General: Mohammed Ali Jinnah.

Prime Minister: Liaquat Ali Khan.

Principal cities (census 1941): Lahore, 671,659 (Punjabi manufacturing center); Karachi, 359,492 (capital); Dacca, 213,218 (rice, jute); Rawalpindi, 181,169 (military center); Multan, 142,768 (Punjabi trading center).

Principal languages: Bengali, Punjabi, Hindu-stani tongues.

*Unofficial estimate based on 1941 census; definitive statistics were not available in 1947.

As one of the two successor states to India, Pakistan has a status and interim government similar to that of the Union of India.

The new dominion consists of two large sectors of India about 1,000 miles apart, separated by the Union of India: in the northwest, Sind, British Baluchistan, the North-West Frontier Province, western Punjab and a few small native states; in the northeast, eastern Bengal and the Sylhet district of Assam. It contains large communal minorities of Hindus and Sikhs.

Pakistan, poor in industry and natural resources, is primarily an agricultural nation. The Punjab contains important wheat areas, and eastern Bengal is rich in jute, rice and tea. The most important manufacturing area is in the vicinity of Lahore in the Punjab. Karachi, the chief port, is the distribution center for north India. Pakistan contains the valley of the Indus in the west and part of the Ganges delta in the east. To the northwest, it controls the strategic mountain passes into Afghanistan.

NATIVE STATES OF INDIA

Unlike British India, the 560-odd native states and subdivisions, with about 45 percent of the area and one-quarter of the population of India as a whole, were united to Britain only through the suzerainty of the King-Emperor, whose control was limited to broader matters affecting India as a whole. With the promulgation of the Indian Independence Act, British supremacy lapsed, and these states were left free to determine their future course. Most of them, with British encouragement, chose to enter into relations with the Union of India (and a few with Pakistan) similar to those which prevailed with Britain. Thus, the dominion governments assumed responsibility for defense, foreign affairs and communications, but the states otherwise retained their sovereignty. Most of them are represented in the respective Constituent Assemblies. The principal native states or divisions thereof declining to enter either dominion in late 1947 were Hyderabad, Kashmir, Kalat and Bahawalpur.

Palestine (British Mandate)

Area: 10,159 square miles.

Population (est. 1946): 1,912,110.

Density per square mile: 188.2.

British High Commissioner: Sir Alan Gordon Cunningham.

Principal cities (est. 1946): Jerusalem, 164,440 (capital, religious center); Tel Aviv, 183,200 (Jewish communal center); Haifa, 145,430 (chief port); Jaffa, 101,580 (seaport).

Monetary unit: Palestinian pound (£P).

Languages: English, Hebrew, Arabic.

Religions (est. 1946): Mohammedan, 59.7%; Jewish, 31.7%; Christian, 7.5%; others, 1.1%.

HISTORY. The history of troubled Palestine, cradle of two great world religions, is mostly a chronicle of invasion, conquest and confusing divisions. To the ancient Hebrews it was known as the "Land of Canaan"; the name Palestine is derived from that part of the country inhabited by the Philistines of Biblical times. About 1000 B.C. the Hebrews succeeded in establishing a single monarchy, which later split up into two kingdoms—Judah and Israel. The country was subsequently invaded and overcome by many peoples, including the Assyrians, Babylonians, Egyptians, Persians, Macedonians, Romans and Byzantines. In A.D. 634-36, Palestine was wrested from the Byzantine Empire by the Arabs. Frankish Crusaders captured Jerusalem in 1099 and set up a feudal kingdom which endured until the defeat of the Franks by Saladin (1187) and the restoration of Moslem rule. In 1516 suzerainty over the area was transferred from the Mamelukes of Egypt to the Turks. It remained part of the Ottoman Empire until World War I, when British forces under General Allenby defeated the Turks and captured Jerusalem (Dec. 9, 1917). The League of Nations mandate awarded to Britain was put in force Sept. 29, 1923.

Meanwhile, a movement had been founded in 1897 by Theodor Herzl to create a Jewish homeland in Palestine, and a considerable number of Jewish immigrants had entered the country prior to World War I. On Nov. 2, 1917, official British recognition was given both to the growing Arab nationalist movement and to the Zionist aspirations by the issuance of the so-called Balfour Declaration, which read:

"His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of that object, it being understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by the Jews in any other country."

The declaration was attacked by the Arabs. Throughout the period between the

two World Wars, outbreaks of violence and open revolt occurred. Jewish immigration continued, especially after the rise of Hitler. A British royal commission report approved by the British Government July 7, 1937, recommended the partition of Palestine into an Arab and a Jewish state separated by a mandated area in the vicinity of Jerusalem and at Nazareth. The Arabs opposed the proposal, advocating instead the establishment of an independent Palestine with full minority rights for the Jews. In May, 1939, the British Government issued a White Paper declaring the establishment of a Jewish state contrary to British obligations to the Arabs and promising, after a transitory period of ten years, the establishment of an independent Palestine in which Arabs and Jews would share authority in government. During the next five years, 75,000 Jews were to be allowed to enter Palestine. These proposals did not satisfy either party, and the League Mandates Commission questioned their validity, but the outbreak of World War II overshadowed all other issues.

Arab-Jewish cooperation in the war effort introduced a period of order, but the end of European hostilities in 1945 brought a renewal of friction and the formation of the Arab League in that year served to demarcate lines of opposition. By 1946, there were many acts of terrorism by the Irgun Zvai Leumi, an illegal army, and the Stern Gang, both of which were repudiated by the Jewish Agency for Palestine. In July, 1946, a proposal was made in London for a federalized Palestine consisting of Arab, Jewish and British districts and subject to a British-controlled central government. This so-called "Morrison Plan" had British support, but was unacceptable to President Truman and was attacked by Arabs and Jews alike.

Attempts to bring Jewish immigrants into Palestine illegally were intensified during 1947, and terrorism grew apace. Meanwhile, on Feb. 14, 1947, the Attlee government referred the whole problem to the United Nations for advice. The majority report of a special U.N. investigating committee recommended to the General Assembly in Sept., 1947, that Palestine be partitioned into Arab and Jewish states which would be independent politically but united economically. Jerusalem would be under international trusteeship. The minority recommended a federal unitary state similar to that proposed by Britain in Feb., 1947 and rejected by both sides.

GOVERNMENT. Palestine is administered by Great Britain under a mandate of the League of Nations. The civil administration is headed by the British High Commissioner, who is also commander in chief and may exercise extraordinary powers in the event of emergency. The Jewish community enjoys a great amount of autonomy

in its internal affairs through an Elected Assembly and a General Council (*Va'ad Leumi*). The Rabbinical Council has jurisdiction in matters of Jewish personal status, and the Jewish Agency for Palestine is the recognized body in all matters pertaining to the Jewish National Home. It also supervises Jewish immigration. The Moslem Supreme Council controls Moslem religious affairs. Arab politics is largely dominated by the Arab Higher Committee.

Palestine is garrisoned by two British infantry divisions, two airborne brigades, the Trans-Jordan Arab Legion and units of the Royal Air Force. There is also a police force of about 6,000, approximately half British and a quarter Moslems. The remainder are Palestine Christians and Jews.

SOCIAL AND ECONOMIC CONDITIONS. Education in Palestine is neither compulsory nor universal. The public system consists of Government Arab schools and of Jewish schools administered by the Jewish General Council but subject to Government inspection. In 1942-43 the Arab system had 412 schools (13 with secondary sections) with 56,635 scholars; the Jewish public schools numbered 488 with 66,829 scholars. There were 259 private Jewish schools with 23,662 pupils and 342 other private schools with 30,947 pupils. Enrollment at the Hebrew University in Jerusalem was 657 in 1941-42.

From 1922 until 1944 the estimated increase in the population was 987,576; the estimated increase among Jews was 444,912, among Moslems 472,100 and among Christians 64,083. Four-fifths of the increase in the Jewish population was attributable to immigration, while the increase in the Moslem population was attributable to the high birth rate. A large proportion of the Palestine Christians are Arabs.

Palestine is the Holy Land for Jew and Christian alike and, to some extent, for the Moslems, whose Mosque of Omar stands in Jerusalem. In addition to Jerusalem, historic towns include: Bethlehem, the birthplace of Jesus; Nazareth, in Galilee, His boyhood home; Jericho, famous in both the Old and New Testaments; Hebron, one of the oldest inhabited cities in the world; the ancient town of Beersheba; Acre, near Mt. Carmel; and Askalon, on the coast.

Agriculture remains Palestine's chief industry. The maritime plain, the Plain of Esdraelon, and the northern Jordan Valley are the principal agricultural areas. In 1944 about 380,000 acres were in Jewish possession, of which 48.2 percent had been purchased by the Jewish National Fund for perpetual lease to Jewish settlers. Most of the Jewish rural settlements are located in the maritime plain, the Plain of Esdraelon and upper and lower Galilee. Citrus cultivation, confined largely to the maritime plain, normally furnishes the major

export crop. However the industry was disorganized by World War II, with exports dropping from about 15,000,000 cases before 1939 to about 2,425,000 in 1943-44, but recovering to 5,666,468 cases in 1945-46. Other important crops include olives, rice, fresh fruits and vegetables, figs, tobacco, wheat, barley, maize, sesame and potatoes. The dairy industry has made rapid progress in recent years, especially on Jewish farms.

Palestinian industry has also developed substantially during the past 15 to 20 years. In addition to the manufacture of consumer's goods for home consumption, articles prepared for export include Dead Sea chemicals, glass, shoes and soap. During World War II, Palestine became one of the world's leading diamond cutting centers. Exports in 1945 reached 141,384 carats valued at £6,049,557. Refineries and storage tanks of the Iraq Petroleum Co., are located at Haifa, a terminus of the pipeline from the Iraq oilfields.

Exports (1946) were £24,500,000 and imports £70,400,000. The U. S. was the principal destination of exports (£5,081,000), followed by Egypt (£4,875,000), Britain (£4,371,000) and Greece (£2,175,000). Britain was the principal supplier (£14,209,000), followed by Iraq (£10,482,000, mainly petroleum), U. S. (£5,774,000), Turkey (£5,171,000) and Canada (£3,875,000). The principal articles of export were citrus fruit and juices, edible oils, asphalt, fuel oils, polished diamonds and glass. Leading import items aside from petroleum included grain, livestock, milk powder and fish.

COMMUNICATIONS AND FINANCE. Palestine railways (1942) included 302 miles of broad gauge and 111 miles of narrow gauge (Hejaz railway). All-weather roads (1942) totaled 1,590 miles and seasonal roads 950 miles. In 1945, 3,140 private cars were licensed, and there were 22,833 telephone subscribers.

The Palestinian pound (£P) is at par with the pound sterling. Revenue (1946-47) was estimated at £19,781,000; expenditure, £20,484,000. The public debt (1944) was £3,600,000, and currency in circulation (1946) £45,800,000.

TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE. Palestine is a plateau traversed from north to south by mountains and broken by great depressions, also running from north to south. The Maritime plain is remarkably fertile. The Jordan, the only important river, rises in Syria and flows south along the Trans-Jordan border through Hule marshes and lake, and the Sea of Tiberias (Sea of Galilee) into the Dead Sea, 1,286 feet below sea level.

Mineral resources are limited. The chief minerals of commercial importance are potash (1945: 98,645 short tons), gypsum,

sulfur, limestone and rock salt. The Dead Sea contains many valuable dissolved salts, and petroleum and bitumen exudations are found around its southern end.

There are few forested areas, and wood is a major import in normal years. The catch of fish was 4,680 tons in 1945.

Summers are hot and dry in Palestine, with occasional maximum temperatures of 100°, although 80°-90° is the more normal maximum. In the Jordan valley, noted for its climatic extremes, the thermometer occasionally reaches 130°; it may range from freezing point to 80° within 24 hours. The mean annual temperature at Jerusalem is 62.8°, with February the coolest month (47.2° mean) and August the hottest (76.3° mean). Rainfall throughout Palestine occurs chiefly in autumn and spring; the mean annual average is 28 inches along the coast and 26 inches in Jerusalem.

OCEANIA

Australia, Commonwealth of (Dominion)

Area: 2,974,581 square miles.

Population (census 1946): 7,466,456.

Density per square mile: 2.5.

Governor General: William John McKell.

Prime Minister: Joseph Benedict Chifley.

Principal cities (est. 1943): Sydney, 1,398,000 (seaport, wool market); Melbourne, 1,170,000 (seaport, wool, wheat); Brisbane, 370,500 (seaport, industrial center); Adelaide, 362,500 (seaport); Perth, 263,000 (western seaport); Canberra, 12,200 (capital).

Monetary unit: Australian pound (£A).

Language: English.

Religions (census 1933): Anglican, 38.6%; Roman Catholic, 17.5%; Presbyterian, 10.7%; Methodist, 10.3%; other Christians, 9.1%; others, 13.8%.

HISTORY. Australia was the last continent to be discovered. The first Europeans to land were the Dutch, who sailed into the Gulf of Carpentaria in March, 1606. Later in the same year, Luis Vas de Torres, a Spaniard, sailed through the strait subsequently named for him, and may have touched at several points on the north coast. In 1642 Abel Tasman (for whom Tasmania was named) sailed from west to east along the southern shore and proved that Australia was not a part of the Antarctic continent. The continent was named New Holland, and it was so called until about 1850.

In 1770 Captain James Cook, after visiting New Zealand, sailed to the east coast of New Holland and landed south of the present city of Sydney. His account of the country led to its being claimed and settled by Great Britain.

The first settlement, made in 1788 at Botany Bay, was founded as a penal station for criminals from England. Transporta-

tion of criminals was virtually suspended in 1839, and Australia had comparatively few white settlers until gold was discovered in Victoria in 1851, after which immigrants poured in. By 1860 all the states (then separate colonies) except Western Australia had been granted responsible government.

On January 1, 1901, the six Australian states united to form the Commonwealth of Australia. The Commonwealth supported Great Britain wholeheartedly in World War I, sending 329,883 troops abroad, all volunteers, of whom 59,258 were killed, died or were missing. The financial drain on a nation of less than 6,000,000 population was extremely heavy.

The Commonwealth again declared war on Germany September 3, 1939; and in 1940-42, Australian troops distinguished themselves in the African, Balkan, Crete and Malayan campaigns. With the Japanese invasion of Southeast Asia and New Guinea in late 1941 and early 1942, Australia was threatened with invasion for the first time in 150 years. The Commonwealth became a vast base for U.S. troops, and Gen. Douglas MacArthur set up his headquarters there on March 17, 1942.

In the general elections held August 21, 1943, Prime Minister John Curtin's Labour Government was confirmed in office. Curtin died July 5, 1945, and was succeeded by Joseph B. Chifey. The Crown's appointment, on Commonwealth recommendation, of the Hon. William J. McKell, a local Labour politician, to the office of Governor General on Jan. 31, 1947, to succeed the Duke of Gloucester, was bitterly criticized by the opposition and marked a further loosening of Australia's ties with Empire.

GOVERNMENT. Australia, a self-governing member of the British Commonwealth of Nations, is a federal union of six states (New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania) and two territories (Northern Territory and Australian Capital Territory). The Constitution is modeled to some extent on that of the United States. Federal legislative power is vested in a Parliament of two houses—the Senate with 36 members (six for each state) and the House of Representatives, with 74 members elected on a population basis. Executive power nominally is exercised by the King, acting through the Governor General, who is appointed by him. Actually, however, the Commonwealth is administered by the Prime Minister and the Cabinet members, who are responsible to the House of Representatives and must enjoy its confidence. The House of Representatives continues its sessions for three years from the date of its first meeting, unless sooner dissolved. Senators are chosen for six years, but the Senate may be dissolved in the event of prolonged disagreement with the House. The party

alignment in the House after the elections held Sept. 28, 1946, was as follows (pre-election alignment in parentheses): Labour 43 (49); Liberal 17 (15); Country 12 (10); Independent Labour 2 (0).

Each of the states is headed by a governor appointed by the Imperial Government who is advised by the Prime Minister and his Cabinet; the latter actually administer the government. As in the U. S., the state governments retain the powers not specifically delegated to the federal government. The Northern Territory is administered by the federal government.

Federal judicial power is vested in a Federal Supreme Court of six justices, appointed by the Governor General in Council. Each state has its own judicial system.

SOCIAL AND ECONOMIC CONDITIONS. Normal primary education is provided free by the states. In 1941 there were 9,535 state schools with average attendance of 732,116; 1,863 private schools with average attendance of 256,500; 101 technical schools with total enrollment of 108,232; and 8 universities with enrollment of 10,761.

Australia is the world's chief producer of wool, and sheep farming is the Commonwealth's most important single industry. About 55 percent of Australia's total area is suitable (mining excepted) only for pastoral pursuits. In 1945 there were 106,000,000 sheep, 14,130,000 cattle, 1,630,000 hogs and 1,360,000 horses. The production of wool in 1946 amounted to 879,000,000 pounds; butter production in 1945 was 136,533 tons and cheese, 35,331 tons. Meat production averages 1,000,000 long tons a year (1945: 904,814).

The most important crop is wheat; the areas of heaviest production are in South Australia and New South Wales, but production in Western Australia is rapidly increasing. Total output in 1945-46 was 4,328,400 tons. Production of oats (1944-45) was 225,000 tons, barley (1943-44) 190,000 tons, maize (1944-45) 170,000 tons. Sugar and cotton are grown in Queensland and New South Wales, tobacco in northeast Victoria, and vines chiefly in South Australia and Victoria.

Australian industry has made rapid progress, with the value of industrial output tripling between 1915 and 1940. Manufacturing is concentrated in or near the capital cities and is mainly concerned with primary production such as the processing of pastoral products, although heavy industrial goods are being manufactured in increasing volume. New South Wales is the leading industrial state. Power for industry is derived almost entirely from coal. In 1943-44 there were 731,044 workers producing net output valued at £A366,235,000.

Exports in 1945-46 were valued at £A189,493,125 and imports at £194,575,000. In 1944-45, exports went chiefly to the United

Kingdom (£52,119,000), United States (£30,766,000) and India (£15,800,000); imports came mainly from the United States (£72,877,000), United Kingdom (£61,692,000) and India (£16,147,000). Leading exports normally are wool, gold, butter and wheat. Leading imports include automobiles and parts, petroleum, cotton and linen piece goods, electrical machinery and appliances, and paper.

The principal ports are Sydney, Melbourne and Adelaide. Railway mileage (1945) totaled 27,144; roads (1941) about 455,000 miles. Civil aviation is under Commonwealth control. In 1946 there were 31,301 route miles open; 18,695,311 miles were flown and 620,666 passengers carried.

Revenue (actual 1945-46) amounted to £356,875,000; (estimated 1946-47) £385,000,000; expenditure (actual 1945-46), ordinary £132,000,000, defense £378,000,000; (estimated 1946-47), ordinary £223,000,000, defense and postwar charges £221,000,000. The public debt (Mar. 31, 1946) £2,818,000,000.
